1989 Test Resource

's Fiscal Year

GAO	United States General Accounting Office Washington, D.C. 20548		
	National Security and International Affairs Division		
	B-238677		
	September 25, 1990		
	The Honorable Les Aspin Chairman, Committee on Armed Services House of Representatives		
	Dear Mr. Chairman:		
	This fact sheet is in response to your request that we determine the amount of funds budgeted by the Department of Defense (DOD) in fiscal year 1989 for test and evaluation of DOD's major weapon system acquisi- tions. This information is intended to give the Congress a baseline for evaluating future development and operational test resource funding requests.		
Results in Brief	Test and evaluation resources included in DOD's fiscal year 1989 budget amounted to about \$5 billion. Of this amount, \$4.1 billion is allotted for the Major Range and Test Facility Base. This base consists of 21 ranges and test facilities used to support development and operational testing and training. The costs associated with this base include daily operating activities, military personnel salaries, capital investments, and charges to customers for using the ranges and test facilities.		
	The remaining amount, approximately \$900 million, is allotted for a mixture of Office of the Secretary of Defense and military service pro- grams that include acquiring development and operational test resources.		
	Although DOD has a budgeting system for displaying actual and programmed resources, it does not aggregate all resources attributable to test and evaluation. According to DOD officials, there are limitations and constraints involved in trying to accurately identify budget figures for all related test and evaluation resources. Several program elements may provide direct, as well as indirect, support for test and evaluation. Also, some resources are difficult to segregate. For example, a special piece of test equipment may be needed to test a specific capability of a weapon system. This type of test equipment would not be included in the overall test and evaluation budget figure; neither would so-called "black" or classified programs' test and evaluation requirements be included. While training costs are included in these figures, they cannot be segregated in all cases. Consequently, test and evaluation resources		

	may be somewhat overstated in certain categories and understated in others.
	A more detailed discussion of the results of our work is presented in appendix I.
Scope and Methodology	To obtain the most accurate and up-to-date test and evaluation resource figures for fiscal year 1989, we distinguished between Major Range Test Facility Base and all other test resources because the data were accumu- lated differently. For the ranges and test facilities, we reviewed budget submission exhibits and congressional conference reports. Dated Sep- tember 1988, these documents represented the most current information at the time of our review.
	For the remaining test and evaluation resource funding categories, we reviewed the President's budget submitted in January 1989 to obtain the most accurate figures for fiscal year 1989.
	In gathering data on DOD's fiscal year 1989 budget figures for test and evaluation resources, we interviewed DOD officials responsible for test and evaluation resources and reviewed budget documentation.
	We did not obtain written agency comments on this report. However, we discussed the information contained in this report with DOD representa- tives and incorporated their comments as appropriate.
	We are sending copies of this report to the Secretaries of Defense, the Navy, Army, and Air Force and interested congressional committees and Members. We will also send copies to interested parties upon request.

Please contact me at (202) 275-8400 if you or your staff have any questions. Major contributors to this fact sheet are listed in appendix II.

Sincerely yours,

Ban & Mart

Paul F. Math Director, Research, Development, Acquisition, and Procurement Issues

NATO North Atlantic Treaty Organization

GAO/NSIAD-90-177FS Test Resources

In response to the House Committee on Armed Services' request regarding the proportion of resources allocated to development and operational testing, we developed information on DOD's test and evaluation resource budget for fiscal year 1989. The House Committee on Armed Services believes that this information could serve as a baseline for analyzing future test and evaluation funding requests.

"Test resources" is a collective term that encompasses all elements necessary to plan, collect, and analyze data from a test. Examples of test resources include manpower, test support equipment, simulation models, threat simulators, and targets.

Although DOD has a budgeting system for displaying actual and programmed resources, it does not aggregate all resources attributable to test and evaluation.

DOD Budget Procedures The Five-Year Defense Program is the official document that summarizes DOD's programs, as approved by the Secretary of Defense. DOD uses this program to prepare its annual budget submissions to the Congress. It is also used extensively as a source of data both for analysis and for displaying and portraying actual and programmed resources.

The costs of individual programs are broken down into research and development, investment, and operating expenses. A "program element," which is a primary data element in the program, generally represents aggregations of organizational entities and related resources. Program elements are the building blocks of the budgeting system and may be analyzed in a variety of ways. For example, they can be compiled into logical groupings, such as test and evaluation resources, for analytical purposes.¹

Within the budgeting system, various types of funding are used to acquire test resources. For example, research, development, test and evaluation management, and support funding is used throughout the development and production cycle until the system is operationally deployed. Once the system is deployed, operations and maintenance

¹For this review, we obtained information on the Major Range and Test Facility Base and all other test and evaluation resources. For the Major Range and Test Facility Base, we reviewed budget submission exhibits that identified the projected funding needed to operate the ranges. For the remaining test and evaluation budget categories, we used program elements that were directly and indirectly attributable to supporting test and evaluation.

	funding is used. In addition, procurement funds are normally used to acquire production items.
Limitations and Constraints	According to DOD officials, there are limitations and constraints—such as the following—involved in trying to identify all test and evaluation resource budget figures:
	 DOD's budget does not aggregate all costs attributable to test and evaluation in specific budget line items. However, Office of the Secretary of Defense officials stated that it is possible to identify budgetary line items (e.g., program elements) in DOD's budget that are directly and indirectly related to these resources. That is, test and evaluation costs can be tracked at the service level via program managers. DOD officials do not believe that the identification of all test and evaluation resources is worth the additional effort in tracking. Program managers sometimes include unique test and evaluation resources as part of the estimated weapon systems' costs that cannot easily be identified. For example, a special piece of test equipment may be needed to test a specific capability of the weapon system. As a result, this special test equipment will not be included in overall test and evaluation budget figures. The budgetary line items used to designate test and evaluation resources cannot be considered "pure" because training is included as a portion of test and evaluation. For example, we identified and segregated \$636 million of training-related cost that had been included within the funding for test and evaluation resources. According to Navy officials, test and evaluation resources do not include those purchased for the so-called "black" or classified programs involving extremely sensitive weapon systems.
	and evaluation resource funding, budgetary line items used to capture test and evaluation costs can change over time, making the identifica- tion of these resources even more difficult. For example, an Office of the Secretary of Defense budgetary line item that was established for a sim- ulator program in fiscal year 1989 was eliminated in fiscal year 1990 when simulator funding allocations were returned to the services.

Appendix I **DOD's Test and Evaluation Resource Budget** for Fiscal Year 1989 To provide a framework for identifying the magnitude of test and evalu-Test and Evaluation ation resources in DOD's fiscal year 1989 budget, we have presented data **Resources for Fiscal** in two ways. First, test and evaluation resources are grouped into six general budget categories that include, but are not limited to, simulators Year 1989 and targets. Second, this same information is presented as the Office of the Secretary of Defense and the military services categorize it in their budgets. General Test and The overall summary of test and evaluation resources for the six budget categories is provided in table I.1. Each category is then discussed sepa-**Evaluation Budget** rately in tables I.2 through I.6. Categories **Table I.1: Test and Evaluation Resources** for Fiscal Year 1989 Dollars in millions Amount **Budget category** \$4.102ª Major Range and Test Facility Base Development test and evaluation 143 207 Targets 187 Simulators Operational test and evaluation 280 96 Combat development Total \$5.015 ^aDue to rounding, this figure differs slightly from the sum of the Major Range and Test Facility Base subtotals included in tables 1.7, 1.8, 1.9, and 1.10. A primary part of DOD's test and evaluation resources is comprised of Major Range and Test Facility Base the Major Range and Test Facility Base, which consists of 21 ranges and test facilities operated for test and evaluation (both development and operational testing) as well as training. The costs to operate and maintain the ranges and test facilities include costs for institutional operations, investments, and user-reimbursable funding. User-reimbursable funding is particularly important because it is used to capture the test and evaluation resources provided by individual weapon system programs for using the ranges and test facilities. Unique equipment acquired for a weapon systems program is not a part of the user funding. (See table I.2.)

Table I.2: Major Range and Test Facility Base Resources for Fiscal Years 1988-89

Development Test and

Evaluation

Dollars in millions

Test instrumentation ^o	30	30
Dynamic Radar Cross Section Measurement Facility ^e	8	9
Improvement capability program ¹	49	51
	472	504
Subtotal		
Subtotal Jser funding ^g	1,473	1,486

^aInstitutional operations include programs and activities supporting daily operating activities. Funding for these operations is provided by each service.

^bThis figure represents the cost of military personnel assigned to the ranges and test facilities.

^oProgram element 0605863F: This program provides resources for maintaining all test and test-supportcoded aircraft and support equipment items assigned to the Air Force Systems Command. These resources are included as a portion of the Major Range and Test Facility Base. Funding through this program pays for depot-level aircraft maintenance.

^dProgram element 0604940D: This program provides engineering, development, and initial acquisition of DOD-sponsored instrumentation systems that are used by two or more services to support the testing of nationally significant weapon systems. To provide additional funding for test and evaluation resources, DOD plans to add \$1.3 billion to this program element over fiscal years 1990 to 1994. This program element will be used to establish the Central Test and Evaluation Investment Program.

^eProgram element 0605809F: This program includes funds for the design, development, and installation of the Air Force Dynamic Radar Cross Section Measurement Facility that will provide needed capability for developing the Low Observable Aircraft/Missile.

¹Program element 0604755F: This program includes the engineering, development, acquisition, and installation of significant new test range and instrumentation systems needed to ensure that the systems tested are compatible with the range used for testing.

⁹User funding, which is the reimbursement by users of the costs of the ranges and test facilities, offsets the operating cost to the service managing the range or test facility.

Traditionally, this category has been used to provide support for programs that cut across service lines as well as to fund the improvement and modernization of the Major Range and Test Facility Base. This category includes joint test and evaluation programs, the development of threat simulators, and the development and demonstration of an instrumented DOD-wide Ground Positioning System. (See table I.3.)

Table 1.3: Development Test and Evaluation Resources for Fiscal Years 1988-89

Dollars in millions

	Pre	President's budget		
Development test and evaluation	1988	1989	Change	
Air Force electromagnetic radiation test facilities ^a	\$6	\$5	\$1	
Army support of development testing ^b	18	19	1	
Defense agencies' development test and evaluation°	64	55	-9	
Defense agencies' live-fire testing ^d	7	9	2	
Defense agencies' North Atlantic Treaty Organization Cooperation ^e	43	31	-12	
Defense agencies' space system test capabilities'	2	2	0	
Defense agencies' foreign weapons evaluation ⁹	30	15	-15	
Defense agencies' joint technical coordination for aircraft survival ⁿ	7	7	0	
Total	\$177	\$143	-\$34	

^aProgram element 0604747F: This program funds the operation, maintenance, and improvement of test facilities used by weapon system program offices in determining whether systems can operate in nuclear and nonnuclear electromagnetic environments.

^bProgram element 0605702A: This program develops, provides, and maintains a full range of meteorological support required by the Army at 14 permanent test sites and for special support at temporary test sites.

^cProgram element 0605804D: This program supports joint test and evaluation programs, the development of threat simulators, and several independent test and evaluation activities. This program's fiscal year 1989 budget is \$55.1 million, which includes \$12.7 million for joint live-fire testing.

^dProgram element 0605131D: Live-fire testing is performed to evaluate the vulnerability and lethality of weapon systems in combat by firing munitions likely to be encountered in combat at the weapon system's platform configured for combat. It supports the development of live-fire unique instrumentation, the procurement of necessary foreign material not otherwise available to serve as expandable live-fire testing threats and targets, and the funding of several independent test and evaluation live-fire activities.

According to DOD live-fire officials, the services have provided an additional \$29 million for the live-fire testing of various weapon systems, while other sources account for \$3.1 million, which is used to purchase foreign materials for live-fire testing. These amounts represent costs that are not specifically identified or captured by DOD's budget. Since these amounts are attributable to specific weapon systems, we have not included them in program element 0605131.

^eProgram element 0605130D: This North Atlantic Treaty Organization (NATO) Comparative Test Program supports the evaluation of NATO nations' munitions, weapons, subsystems, and equipment, with a view toward meeting a valid U.S. service requirement.

¹Program element 0604941D: This program element funds new capabilities and the significant upgrading of existing testing capabilities and facilities required by new DOD operations in space.

⁹Program element 0605111D: This program supports the continuing test and evaluation of foreign nations' munitions, subsystems, weapons, equipment, and technologies with a view toward meeting a valid service requirement. Funds from this program element are provided directly to the services to support the test and evaluation of foreign systems and technology programs that are nominated by the services and approved by the Office of the Secretary of Defense.

^hProgram element 0605132D: This program supports the development, test, and evaluation programs and activities for joint combat survivability aircraft. Targets

Due to their importance to test and evaluation, targets have been singled out in the past by DOD as special interest items. Thus, targets have traditionally been categorized as unique undertakings. This budget category generally includes the development and procurement of various targets used for both test and evaluation as well as training. (See table I.4.)

Table I.4: Target Resources for Fiscal Years 1988-89

Dollars in millions

	Pre	sident's b	udget
Programs	1988	1989	Change
Air Force aerial targets procurement ^a	\$15	\$25	\$10
Air Force advanced aerial targets ^b	8	4	-4
Air Force target drones ^c	11	24	13
Navy advanced anti-submarine warfare targets ^d	10	11	1
Navy targets systems developmente	70	93'	23
Navy aerial targets ^g	10	17 ^t	7
Army technical test instrumentation and targets ^h	11	11	0
Army air defense targets	20	22 ^f	2
Total	\$155	\$207	\$52

^aProgram element 0305116F: This program includes manpower authorizations, support equipment, and facilities relative to aerial targets, drone squadrons, drones, and tow targets.

^bProgram element 0604211F: The purpose of this program is to move appropriate projects that have completed advance development into engineering development. This program is intended to provide fully developed aerial target systems and subsystems based on required operational capabilities and joint service operational requirements.

^cProcurement item 3020F-#20: Funding for this program includes both full-scale and subscale aerial targets with associated augmentation, scoring, and countermeasure devices. These targets are used to test and evaluate weapon systems against simulated threat aircraft and missiles.

^dProgram element 0603529N: The Navy uses this program (projects S0968 and S1955 only) to develop underwater antisubmarine warfare mobile targets for weapon and sensor evaluation as well as fleet training.

^eProgram element 0604258N: Projects W0610 and W0611 included in this program are used to develop aerial and surface targets and associated augmentation and auxiliary systems. These projects, including W0609 and S0612, are considered necessary to duplicate or simulate threat characteristics in support of weapon systems' performance test and evaluation and fleet training.

¹This figure includes training funds that cannot be broken out.

⁹Procurement item 1507N-#27: This program provides powered and towed targets and necessary target auxiliary and augmentation systems equipment for fleet training and weapon systems test and evaluation. According to Navy officials, approximately \$16.8 million of the program's \$109.2 million funding is related to test and evaluation.

^hProgram element 0605602A: The two projects within this program that are included as test resources are D238-aerial targets and D459-ground targets. The first provides funding for development, prototype fabrication, and test and evaluation of threat-representative aerial targets. The second develops ground targets to challenge ground and air-to-ground weapons.

Procurement item C93000-#32: This program provides general purpose powered targets, towed targets, and ancillary equipment for Army air defense training worldwide and air defense weapon systems production testing, including quality assurance, lot acceptance, production qualification, and first article tests.

Simulators	Because simulators provide the degree of weapon systems in an electronic warfare of been traditionally singled out as special in simulators can be used for both test and e (See table I.5.)	environment, t iterest items by	hey have y dod. Thr	also reat

Defense agencies' Operational Test and Evaluation Capability Improvement Program ^h	59	59	0
Total	\$277	\$280	\$3

^aProgram element 0207426F: Supported with operation and maintenance appropriations, this program provides planning, direction, control, independent evaluation, and reporting of operational test and evaluation for high visibility assigned programs.

^bProgram element 0605712A: This program finances the operational testing of weapon systems in the development phase.

^cProgram element 0605601A (project D066): Through this project, the Army conducts engineering flight testing of aircraft and aircraft systems to improve the capability of Army aviation.

^dProgram element 0605156M: This program provides support for the test planning, operational testing, and preparation of independent evaluation reports. It includes support for the operational test and evaluation tasks performed by the designated Fleet Marine Force Commanders and Technical Support Activities.

^eProgram element 0605865N: This program provides the Commander of the Operational Test and Evaluation Force with general support for the planning, conducting, and reporting of the operational test and evaluation of Navy weapons systems acquisition projects and the development and validation of factics to enhance the tactical employment of the systems.

¹Program element 0605863N: This program provides support for the ships, aircraft, and platforms required to accommodate the research, development, test, and evaluation of new weapon systems.

⁹Program element 0605118D: This program is the primary support for the Director of Operational Test and Evaluation, who is the principal adviser to the Secretary of Defense and Under Secretary of Defense for Acquisition on operational test and evaluation matters. This office is responsible for the direction and supervision of all aspects of operational test and evaluation (including joint test and evaluation) within DOD.

^hProgram element 0604340D: This is the core program to bring about an operational test and evaluation capability to test weapon systems in realistic air-land-sea battle scenarios. It is a focused, cohesive initiative to establish a DOD capability to conduct operational test and evaluation on conventional weapon systems in the most realistic environment that is reasonably attainable. Instrumentation, targets, and threat equipment are used in performing operational test and evaluation brought about through this program.

Combat Development	This category provides support for the experimentation, tests, projects, and evaluations necessary to develop or validate new doctrines. The budget figures were \$131 million for fiscal year 1988 and \$96 million for fiscal year 1989, according to the President's budget published in Jan- uary 1990.		
	The Army Combat Development program element, which is program ele- ment 0208015A, is composed of the Army Operational Test and Evalua- tion Agency, the Combat Development Experimentation Command; the Training and Doctrine Command's Combined Arms Test Activity; miscel- laneous combat development experiment tests, projects, and evalua- tions; and the Concepts Analysis Agency.		
	While this section placed the DOD test and evaluation resources within six budget categories, the following section sets out those same test and evaluation resources according to organizations—the Office of the Sec- retary of Defense and the services.		
DOD's Test and Evaluation Resources	Although the services are primarily responsible for acquiring test resources, DOD has initiated programs that are multiservice in nature. During fiscal year 1989, the Office of the Secretary of Defense's organi- zations budgeted \$0.3 million for test and evaluation resources, while the Army budgeted about \$1.2 billion, the Navy budgeted \$1.3 billion, and the Air Force budgeted \$2.2 billion. ²		
The Office of the Secretary of Defense's Test and Evaluation Resources	The Office of the Secretary of Defense's organizations provided \$0.3 mil- lion for test and evaluation resources for fiscal year 1989. In some catc- gories, the budgets are used to support Office of Secretary of Defense organizations having oversight responsibility for development and oper- ational testing. The Office of the Secretary of Defense has also initiated programs that are applicable to more than one service. (See table I.7.)

^aThis proving ground is in the southwestern part of Arizona. It supports not only the testing of longrange tube artillery, aircraft armament and air delivery systems and equipment, and air movable equipment, but also natural desert environmental phases of developmental testing of all classes of defense material for DOD and other government agencies.

(cont.)

^bThis proving ground is located 30 miles northeast of Baltimore, Maryland. It is used to conduct development and other tests on artillery weapon systems, ammunition, mortars, recoilless rifles, armored vehicles, grenades, mines, and pyrotechnics.

^cThis proving ground is located 87 miles southwest of Salt Lake City, Utah. It is involved in testing conventional munitions and air vehicles and a variety of other test support activities. It also has unique capabilities for testing chemical warfare, biological defensive systems, and protective items.

^dThis test facility, which is located 50 miles north of El Paso, Texas, and 25 miles northeast of Las Cruces, New Mexico, has extended range launch complexes located in southeast Utah and southwest ldaho. It is used to plan and conduct the development testing and evaluation of Army missiles, rockets, and material systems. This range also controls and monitors all electromagnetic radiation devices on and adjacent to the range and conducts research and development of range instrumentation.

^eThis facility is located at Fort Huachuca, 70 miles southeast of Tucson, Arizona. Its mission includes the testing of all types of Army ground and airborne communications electronics as well as electronic surveillance and detection systems.

¹This facility was constructed in the southern portion of the main area of the White Sands Missile Range. It has the capability to test the new directed energy devices.

⁹This missile range is located in the Pacific Ocean at the Kwajalein Atoll. Its mission is to support on-site ballistic missile defense research and development programs, strategic offensive weapon system developmental and operational testing, and data collection for the DOD intelligence community.

See table 1.6 for description of program elements 0605712A and 0605601A.

Navy Test and Evaluation Resources

The Navy provided \$1.3 billion for test and evaluation for fiscal year 1989: \$1 billion for the Major Range and Test Facility Base and \$235 million for other funded category items. Since it is difficult to separate training resources from test and evaluation resources, these figures also include the cost of training. (See table I.9.)

1

Table I.9: Navy Test and Evaluation Resources for Fiscal Year 1989

Major Range and Test Facility Base	Amount
Atlantic Undersea Test and Evaluation Center ^a	\$79
Naval Air Propulsion Center ^b	72
Naval Air Test Center ^c	445
Naval Weapons Center ^d	203
Pacific Missile Test Center ^e	227
Other range support	
Navy - antisubmarine warfare range support	23
Total	1,049

^aThis facility is a detachment of the Naval Underwater Systems Center at Newporl, Rhode Island. It is located on Andros Island, Bahamas, with the ranges located in the Tongue of the Ocean, a sheltered, deep, quiet body of water. It provides, develops, and operates the deep water facility for underwater acoustic measurements and testing and calibrating sonars. It also provides tracking data on ships, submarines, aircraft, and weapon systems. This effort supports the Navy antisubmarine warfare and undersea research and development programs, assessment, and operational readiness.

^bThis center is located in Trenton, New Jersey. It provides complete technical and engineering support for air-breathing propulsion systems. This includes providing accessories, components, fuels, and lubricants. The center also manages and performs applied research, development, test, and evaluation for the Naval Air Systems Command and the fleet.

^cThis center is in Lexington Park, Maryland. Its mission is to provide technical and engineering support, facilities for life-cycle test and evaluation, and support for aircraft weapon systems and components.

^dLocated at China Lake, California, this center conducts test and evaluation of air- and surface-launched weapons, electronic warfare systems, missiles, life-support systems, and parachute systems. (cont.)

	Appendix 1 DOD's Test and Evaluation Resource Budget for Fiscal Year 1989	
	^e This center's mission includes development, test, evaluation, and follow-on engineering, logistics, and training support for naval weapons, weapon systems, and related devices. It also provides major range, technical, and base support for Navy research, development, test, and evaluation users, the fleet, and other DOD and government agencies.	
	¹ The Antisubmarine Warfare Range Support Program provides training range, weapon proofing range equipment, and fleet support equipment for use on the Navy's underwater ranges.	
	⁹ See table I.4 for descriptions of program elements 0603529N and 0604258N and procurement item 1507N-#27.	
	^h See table 1.5 for a description of program element 0604255N.	
	See table 1.6 for descriptions of program elements 0605865N, 0605156M, and 0605863N.	
Air Force Test and Evaluation Resources	The Air Force had a test and evaluation resource budget of approxi- mately \$2.2 billion for fiscal year 1989. This amount consisted of \$2 bil- lion for Major Range and Test Facility Base and \$163 million for other funded category items. Since it is difficult to completely separate training resources from test and evaluation resources, these figures may also include some training costs. (See table I.10.)

^aThis test wing's mission includes, but is not limited to, flight testing military systems, subsystems, and components, and operating and maintaining a fleet of test support aircraft.

^bThis group provides test and evaluation of aerospace navigation and guidance systems and components, simulation of dynamic flight conditions, as well as operates and supports Air Force Systems Command test aircraft. It is the sponsor for Air Force users of the White Sands Missile Range

^cThe land range area is located in northwest Florida, while the water test ranges cover most of the Gulf of Mexico. This test wing provides the development test and evaluation of nonnuclear air armament for the Air Force. It also provides support for operational training, operational test and evaluation of armament and electronic combat systems, and other activities conducted by operational commands. (cont.)

^dThis center manages, develops, and operates ground environmental test facilities in support of the research and development of aerospace systems. According to Air Force test and evaluation staff, the facility also includes large wind tunnels, space chambers, ballistic ranges, engine test cells, and rocket motor test facilities.

^eA few of this center's mission elements are to plan, accomplish, and report on Air Force development test and evaluation of manned and unmanned aircraft systems and participate in Air Force Initial Operational Test and Evaluation and follow-on tests of manned aircraft systems.

^fThis center's mission includes the management and operation of the Eastern Test Range, which supports the launching and testing of missile and space systems from Cape Canaveral, and the support of the Space Transportation System, which is launched from the Kennedy Space Center.

^gThis center manages and operates the Western Test Range and space and missile field test operations and supports guided missile and aeronautical testing.

^hThis center provides an operational, combat-like range facility where multiple air and ground participants can accomplish integrated air-to-air and air-to-ground training and test and evaluation missions.

¹This center and range are considered by the Air Force test and evaluation staff to be primarily used for training versus test and evaluation.

ⁱThis range provides facilities for all phases of the test and evaluation of manned and unmanned aircraft systems and tactical training for air-to-air and air-to-ground weapon delivery. The range management is the responsibility of the 6501st Range Squadron, which reports to the 6545th Test Group and the Air Force Flight Test Center. According to Air Force test and evaluation staff, the range will become the host of the Electronic Combat Test Capability, which is primarily an operational test and evaluation requirement.
