The Honorable E. Thomas Coleman Ranking Minority Member Subcommittee on Conservation, Credit, and Rural Development Committee on Agriculture House of Representatives

Dear Mr. Coleman:

In a February 18, 1987, letter, you asked us to review all federal programs to determine those that are essentially rural and to recommend which of those programs could be made more productive by being relocated in a new Rural Development Administration. The Rural Development Reorganization Act (H.R. 2026), which you proposed in the 100th Congress, but which had not been acted on at the time the Congress adjourned, would have established such an agency within the U.S. Department of Agriculture (USDA).

Subsequent to your request, we agreed with your office to provide information on three questions: (1) What is rural America? (2) What is the rural share of federal funding? and (3) What are rural development-type programs? This briefing report contains the results of our work, which we presented to your office in a series of briefings.

To respond to the questions, we reviewed descriptive information and financial data on federal programs and, in consultation with your office, developed definitions of "rural" and "rural development-type programs." According to these definitions, rural refers to counties with urban populations of less than 20,000 and rural development-type programs are those that pursue economic development purposes and/or that have an apparent rural focus.

RESULTS IN BRIEF

- -- About two-thirds of all U.S. counties (2,097 of 3,096) met our definition of rural, i.e., counties that have urban populations of less than 20,000. About 16 percent of the U.S. population lives in these counties.
- -- For the programs for which data were reported, about

17 percent of federal domestic funding went directly to rural counties. The percentages of such funding, however, varied widely among the various federal agencies. For example, USDA programs had the highest average of program funds going directly to rural counties—50 percent, while Department of Housing and Urban Development programs and Department of Energy programs had the lowest averages—4 percent and less than 2 percent, respectively.

-- We placed each of the approximately 800 federal domestic assistance programs we identified into one of six categories based on our assessment of the extent to which it met development objectives. The four categories containing the principal rural development-type programs include (1) economic development, i.e., programs that assist business and industry, (2) agriculture and natural resources, i.e., programs that assist food and fiber producers, (3) infrastructure, i.e., programs that help states, communities, and others construct and maintain community facilities, transportation systems, utilities, and public works, and (4) human resources, i.e., programs that provide education, employment and job training, health services, community services, and housing.

We identified 88 programs in these four development categories that met the definition of rural development-type programs. The 88 programs provided total funding to both rural and nonrural counties of about \$29 billion in fiscal year 1987. Rural share data for fiscal year 1985 were available for 48 of these 88 programs (or parts of programs). The 48 programs provided about \$17 billion, of which about 21 percent went directly to rural counties.

OBSERVATIONS

Regarding the proposed Rural Development Administration, our review of federal program descriptions showed that few programs have specific rural development objectives. If a rural development focus is desired at the federal level, it could be created by restructuring and supplementing existing programs, such as those described as rural development-type programs in this briefing report.

Among the federal agencies, USDA administers the greatest number of rural development-type programs, is the only agency with programs in all four rural development categories, and provides the highest percentage of funding to rural counties. Thus, USDA would be the federal agency with the broadest experience base for implementing a rural development policy via the proposed Rural Development Administration.

SCOPE AND METHODOLOGY

We performed our work primarily between August 1987 and June 1988 in Washington, D.C., with updates as appropriate through October 1988. In consultation with your office, we developed definitions of "rural" and "rural development-type programs." We applied these definitions to data from two nationwide federal information systems -- the Bureau of the Census' Consolidated Federal Funds Report and the General Services Administration's Catalog of Federal Domestic Assistance. We integrated data from these two systems and conducted extensive computer analyses to develop lists and descriptions of rural development-type programs. addition, we conducted an extensive literature search, interviewed rural development and public administration experts, interviewed those who maintain and use the two information systems, and reviewed existing laws and legislative proposals relating to rural development.

More details on the objective, scope, and methodology of our review are in section 1. Sections 2, 3, and 4 provide additional details on the three questions we addressed, and section 5 presents observations based on our work. The appendixes provide (1) information on the rural/nonrural classification of all U.S. counties (app. I), (2) lists of federal domestic assistance program funding for fiscal years 1985 and 1987 and rural shares, by agency (app. II) and development category (app. III), and (3) information, such as objectives, types of assistance, and eligibility requirements, for the programs we identified as rural development-type programs (app. IV).

USDA officials reviewed a draft of this briefing report for technical content. Their comments have been incorporated where appropriate. However, at your request, we did not obtain formal agency comments.

As arranged with your office, unless you publicly announce the contents earlier, we plan no further distribution of this briefing report until 30 days from the date of this letter. At that time, we will send copies of this report to various committees, subcommittees, and Members of Congress; the heads of pertinent federal departments and agencies; and other interested parties. Copies will be made available to others on request.

Major contributors to this briefing report are listed in appendix V.

Sincerely yours,

John W. Harman

Associate Director

SECTION 1

OBJECTIVE, SCOPE, AND METHODOLOGY

By letter dated February 18, 1987, Representative E. Thomas Coleman asked us to review all federal programs to determine those that are essentially rural and to recommend which of those programs could be made more productive by being relocated in a new Rural Development Administration. Such an agency would have been established in the U.S. Department of Agriculture (USDA) by the proposed Rural Development Reorganization Act of 1987 (H.R. 2026), which Representative Coleman introduced in the 100th Congress on April 9, 1987, but which had not been acted on at the time the Congress adjourned.

Subsequent to the request, we agreed with the Representative's office that our objective would be to provide information relating to the following questions:

- -- What is rural America?
- -- What is the rural share of federal funding?
- -- What are rural development-type programs?

Further, we advised Representative Coleman's office that insufficient information was available to recommend which rural programs could be made more productive by relocation to a new Rural Development Administration. However, we agreed to make some observations regarding such an agency.

To define rural America and to assist in answering the other questions, we initiated an extensive literature search, which provided information on rural America and rural development. We also interviewed rural development and public administration experts at USDA, the Congressional Research Service, the National Academy of Public Administration, the National Governors' Association, and the National Association of Counties, and reviewed existing laws and current and past legislative proposals relating to rural development.

To determine the share of federal funding received by rural areas and to specify which programs are rural development-type programs, we created a data base drawn from large-scale federal data systems. The two primary data systems we used were the Consolidated Federal Funds Report (CFFR) and the Catalog of Federal Domestic Assistance. In consultation with Representative Coleman's office, we developed the definitions of rural and of development that we used to identify rural development-type programs.

The CFFR, compiled and maintained by the Census Bureau from data provided by federal agencies, is the only governmentwide data

base we identified that provides county-level financial data for individual federal programs. USDA's Economic Research Service (ERS) adds codes, called Beale codes, to the CFFR data base to represent 10 categories of counties by population size. We used the Beale codes to designate rural counties by applying the definition of rural (i.e., a county with an urban population under 20,000) that we had developed in consultation with Representative Coleman's office. The CFFR data, used in this way, provided financial information on individual federal programs for both rural and nonrural counties.

The CFFR had two major limitations with respect to this review. First, at the time of our review, the most recent available CFFR data with Beale codes included were for fiscal year 1985. Second, the CFFR does not provide data on all federal programs; for fiscal year 1985, slightly more than half of the federal domestic programs in the Catalog were reported by the CFFR. However, ERS estimated that the CFFR-reported programs included, in dollars, about 93 percent of the total federal domestic spending for fiscal year 1985. 1

The Catalog is compiled and maintained by the General Services Administration from information submitted by federal agencies. It is a governmentwide compendium of federal domestic programs, projects, services, and activities that provide assistance or benefits to the American public. The Catalog is published annually, usually in May or June, with an update, usually in December. We used the Catalog as the best available source for identifying federal programs (likely the most comprehensive available listing); providing annual financial data on individual programs for the most recent available years; and obtaining program information, such as legislative authority, program objectives, type of assistance, uses and restrictions, and eligibility requirements. The Catalog provides financial data at the federal level; it does not show distributions to states or counties.

We combined CFFR data with Catalog data to take advantage of the strengths of each source. This combination is possible because, in most cases, the two systems use a common program number to identify individual programs. The CFFR system's county-level expenditure data enabled us to calculate, for programs included in the system, the percentage of total program expenditures going directly to rural counties. We then applied the "percent of rural expenditures" to Catalog financial data to provide an estimate of federal funds going to rural America. We used Catalog, rather than

Right Mix?</u>, a background paper prepared by the Rural Business and Government Branch, ERS, USDA, for the Task Force on Rural Development, National Governors' Association, Center for Policy Research (Feb. 1988).

CFFR, financial data in this calculation because Catalog data were available for a more recent year (fiscal year 1987).

To help identify rural development-type programs, we devised a structure for categorizing federal programs on the basis of their economic development and associated purposes. The structure consisted of six development categories: economic development, agriculture/natural resources, infrastructure, human resources, general entitlement, and special groups. We then assigned each federal program in our data base to one of the six development categories, on the basis of available descriptions of the program's objectives (e.g., provide assistance in building or improving physical facilities, such as libraries or schools, or provide training to program participants to assist in obtaining employment).

We did our work primarily between August 1987 and June 1988 in Washington, D.C., with updates as appropriate through October 1988. The purpose of our review was to identify rural development-type programs rather than to review or evaluate any particular agency's programs or program administration. Consequently, and as directed by Representative Coleman's office, we did not obtain formal agency comments. However, USDA officials reviewed a draft of this briefing report for technical content, and their comments have been incorporated as appropriate.

SECTION 2

WHAT IS RURAL AMERICA?

Several attempts have been made over the years to define and categorize rural America. Because none of the resulting definitions satisfied the specific requirements for this review, we developed a working definition of "rural" in consultation with Representative Coleman's office. This section

- -- describes rural America in terms of that definition;
- -- discusses some of the information we used to develop the definition; and
- -- presents the application of the definition, in a series of maps, to the United States, to a specific state, and to a congressional district.

Rural Counties

Counties With an Urban Population Under 20,000

- •Comprise 67% of U.S. Counties, 2,097 of 3,096
- Contain About 16% of U.S.
 Population
- Lag Rest of U.S. in Income, Jobs, and Education

We defined rural counties as those counties with urban populations of less than 20,000, as listed in the 1980 Census of Population and Census updates. Of the 3,096 counties in the United States, 2,097 (about two-thirds) are rural counties under this definition. About 16 percent of the U.S. population lives in rural counties.

Much has been written about the conditions in rural America. While various observers may present somewhat differing views and may have different definitions of rural, it is generally agreed that rural areas lag nonrural areas in such measures as income, jobs, and education. For example, in a 1987 report, 1 ERS, which uses "metropolitan" and "nonmetropolitan" to differentiate between urban and rural areas, commented as follows:

"In the 1980's, downturns in several industries important to rural areas (agriculture, mining and energy, and manufacturing) coincided, turning what would normally be

¹Rural Economic Development in the 1980's: A Summary, ERS, USDA, Agriculture Information Bulletin No. 533 (Oct. 1987).

local or regional problems into a widespread rural decline of national proportions. . . . Rural employment growth since 1979 (the peak of the last business cycle) has been slower than urban employment growth: 4 vs. 13 percent. . . . Between 1985 and 1986, 632,000 people moved out of nonmetro areas. This is a larger outmovement than the annual average of either the 1950's or 1960's, and a turnaround from the 1970's, when nonmetro areas had a net migration gain of over 350,000 persons per year. . . . Nonmetro residents continue to lag behind metro residents in education."

Many observers also note the diversity of rural areas in terms of their economic and social conditions and point out that such diversity must be taken into account in formulating government policies and programs. For example, in a 1985 report, 2 ERS identified seven distinct types of nonmetropolitan, or rural, counties according to their major economic base, presence of federally owned land, or population characteristics. Although some counties did not fit into any of these categories and others fit into more than one category, the seven types were (1) counties heavily dependent on farming, (2) counties heavily dependent on manufacturing, (3) mining-dependent counties with economies based mainly on nonrenewable natural resources, (4) counties with high concentrations of government activities, (5) persistent poverty counties, (6) federal lands counties, and (7) counties characterized as retirement settlements. According to this ERS report:

"Rural policies based on an aggregate analysis of rural development needs cannot accurately reflect the extremely diverse social and economic structure of rural America. Programs tailored to particular types of rural economies may be more effective than generalized programs."

²Lloyd D. Bender et al., <u>The Diverse Social and Economic Structure of Nonmetropolitan America</u>, Agriculture and Rural Economics Division, ERS, USDA, Rural Development Research Report No. 49 (Sept. 1985).

GAO's Approach

Use Population Codes to Designate Rural/Nonrural Counties

Illustrate Using Maps of U.S., Missouri, and a Congressional District

Our approach to addressing the question "What Is Rural America?" was to (1) use population codes to differentiate between rural and nonrural counties and (2) illustrate the application of these codes using maps of the United States, Missouri, and a congressional district in Missouri.

Beale codes, which ERS developed and uses, depict population concentrations for all counties in the United States. (See table 2.1.) ERS uses the Census definition of metropolitan and nonmetropolitan counties and reports most of its data on this basis. Metropolitan counties are represented by Beale codes 0 through 3 and nonmetropolitan counties by Beale codes 4 through 9. For our review, we chose to define as "rural" those counties in Beale codes 6 through 9 and as "nonrural" those counties in codes 0 through 5. Using this definition, which we selected in consultation with Representative Coleman's office, "rural" represents all U.S. counties with urban populations of less than 20,000.

Note: Metropolitan status is that announced by the Office of Management and Budget in June 1983, when the current population criteria were first applied to results of the 1980 Census. Adjacency was determined by physical boundary adjacency and a finding that at least 2 percent of the employed labor force in the nonmetropolitan county commuted to metropolitan central counties.

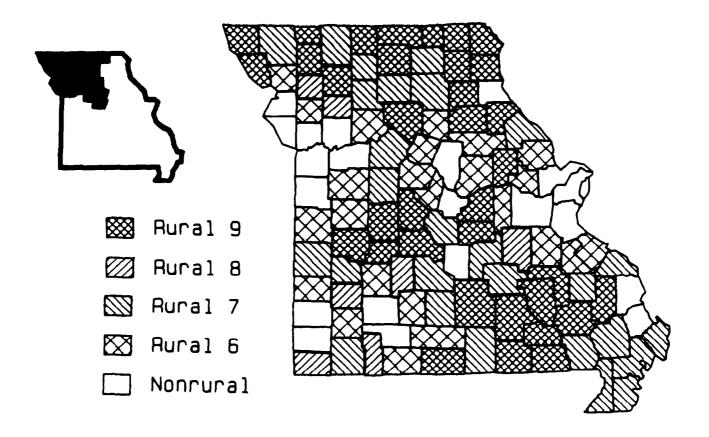

Figures 2.1 through 2.3 present, in a series of maps, the application of Beale code data to show the percentage of rural counties by state (fig. 2.1), the Beale code designation of each county in a state (fig.2.2), and the Beale code designation of each county in a congressional district (fig. 2.3).

Figure 2.1: Percentage of Rural Counties, by State

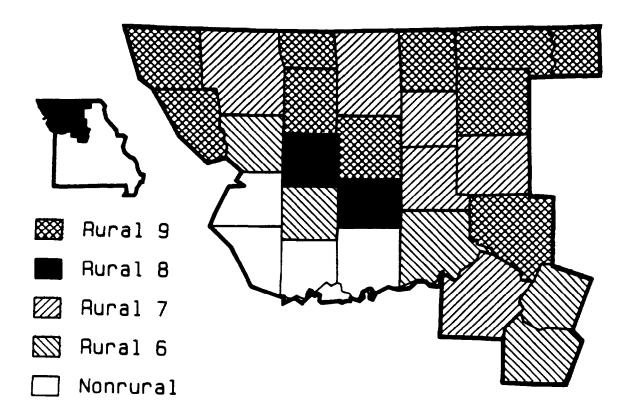

This map shows the rural orientation of each state in terms of the percentage of rural counties in the state. If 80 percent or more of a state's counties are rural (per our definition), that state would fall in the first category above—80— to 100—percent rural. The other categories are similarly defined. Of the 50 states, 13 are in the 80— to 100—percent category, 18 in the 60—to 79—percent category, 9 in the 40— to 59—percent category, and 10 in the 0 to 39—percent category.

Representative Coleman's congressional district is in Missouri. This map shows those Missouri counties that are in rural codes 6 through 9, as well as those that are nonrural.

Figure 2.3: Sixth District--Missouri

Of the 27 counties in Representative Coleman's district, 23 are designated as rural. Only four counties, all in the Kansas City area, are in the nonrural category.

SECTION 3

WHAT IS THE RURAL SHARE OF FEDERAL FUNDING?

This section, which presents information on the overall share of federal funding that went directly to rural counties in fiscal year 1985,

- -- describes our approach for calculating the rural share;
- -- presents a breakdown of program funding and rural share by development category, which we devised to describe the extent to which federal programs can be viewed as rural development-type programs; and
- -- shows the rural share of funding by 15 primary federal departments and agencies.

Rural Shares

Rural Counties Have 16% of Population/Receive About 17% of Domestic Program Funds

Of Agencies, USDA Provides Highest Rural Share--50%

Of Development Categories:

- Ag/Natural Resources Has Highest Rural Share--60%
- Human Resources Has Lowest Rural Share--5%

Our work showed that, for the programs for which rural share data (for fiscal year 1985) were available, about 17 percent of federal domestic funding went directly to rural counties, where about 16 percent of the U.S. population resides. Of 15 primary federal departments and agencies, USDA had the highest average—about 50 percent—of program funds going directly to rural counties. For the development categories that we devised for purposes of this review, rural shares, on the average, ranged from a high of 60 percent for programs in the agriculture/natural resources category to a low of 5 percent for programs in the human resources category.

GAO's Approach

Federal Programs Divided Into

- Dollars to Rural Counties
- Dollars to Nonrural Counties

Data Include Both Loans and Other Expenditures

Amounts Shown Represent "Order of Magnitude" (Indicators, Not Precise Dollar Amounts)

The rural share of federal funding was calculated for each program listed in the CFFR for fiscal year 1985 as the percentage of total program funding going directly to those counties defined as rural (i.e., counties in Beale codes 6 through 9), using the following formula: rural \$/total \$ = rural share (percent). About 16 percent of the U.S. population resides in rural counties; thus when the rural share of program funding exceeds 16 percent, the rural share per person exceeds the national share per person. Conversely, when the rural share is less than 16 percent, the rural share per person falls below the national share. Rural share information for federal agencies and for what we call development categories is shown on the following pages. (Rural shares for individual programs, by agency, are presented in app. II. App. II presents similar data by development category.)

According to ERS, 1 the CFFR data base allocated about 93 percent of the federal funds for fiscal year 1985 to the county level, but many programs were excluded because their expenditures could not be reliably traced to the county level. For these programs, we were unable to estimate rural shares.

The data in this section include funding for both loans (to be repaid) and grants, direct payments, and other expenditures (not repaid). The dollar amounts are taken, in most cases, from the <u>Catalog of Federal Domestic Assistance</u> and represent budget data for fiscal year 1987 reported by the agencies to the General Services Administration. We did not audit these data; therefore they should be viewed as estimates of program size and not as precise budget amounts. We calculated the rural share using the fiscal year 1985 CFFR data, which were the most recent available at the time of our review. (Apps. II and III contain separate funding information for loan (and insurance) programs and for programs involving grants, direct payments, and other expenditures.)

We began compiling our list of federal programs by using Census' CFFR data base for fiscal year 1985. As noted previously, the CFFR provides funding data down to the county level, but does not include a number of programs. Therefore, we obtained information on additional programs from the Catalog. We assigned each program to one of six development categories, which we devised for purposes of this review and which are shown in table 3.1. (A seventh category--defense--was initially included, but was not retained because it did not fit our definition of development-related programs.)

¹Reid and Dubin.

Table 3.1: Development Categories

Main category	Subca No.	tegory Title
Economic development	11 12	Small business Other

General entitlement	51 52 53 54 55	Social security Medicare/medicaid Retirement Public assistance Food stamps Other
Special groups	61 62 63 64 65 66	Veterans Handicapped Coal miners Indians Railroad workers Other

Generally, economic development programs, by definition, have development objectives, while agriculture/natural resources, infrastructure, and human resource programs have both economic development and other objectives (such as equity), and general entitlement and special group programs have objectives other than economic development. In compiling our list of programs, we generally excluded those programs for which the Catalog showed only "salaries and expenses," since such programs did not provide direct economic assistance. Instead, these programs tend to provide such services as technical assistance or similar noneconomic aid.

aThe rural share percentages were derived by applying fiscal year 1985 rural percentages (when available from the CFFR) to fiscal year 1987 data (from the Catalog), as described previously. Only those programs for which rural percentages were available were used in calculating the rural shares.

For the six development categories, we identified 828 federal programs with funding of about \$640 billion in fiscal year 1987. The percentage of funding provided directly to rural counties under the categories (for those programs for which fiscal year 1985 rural percentages were available) ranged from a low of about 5 percent for human resources to a high of about 60 percent for agriculture/natural resources. Overall, these programs provided an average of 17 percent of total program funds directly to rural counties.

Department of Health and Human Services (HHS) programs are in two categories, because HHS' Social Security and other general entitlement programs differ appreciably from HHS' health programs in their rural shares.

Of the 15 primary federal departments and agencies we identified as providing assistance to rural counties, USDA accounted for the highest percentage of program funds going directly to rural counties, about 50 percent. However, the major part of USDA funding is for agricultural commodity programs, which generally are not considered development-related.

SECTION 4

WHAT ARE RURAL DEVELOPMENT-TYPE PROGRAMS

In this section, we

- -- describe our approach and criteria for designating programs as rural development-type programs and
- -- provide information on the federal programs that met our criteria.

Rural development-type programs can be defined either narrowly or broadly. But a narrow definition--such as those programs with explicit rural development objectives--would encompass only a few programs with limited dollars. Therefore, we used a broader definition of rural development-type programs to more adequately reflect the wide range of federal government activity affecting the economic development of rural America.

In most cases, the descriptive information on the federal programs was obtained from the <u>Catalog of Federal Domestic</u> Assistance.

Only USDA Has Programs in All Four Econ Devel Categories

We identified 88 programs that met the criteria we developed to select rural development-type programs. These 88 programs, in the four development categories shown above, provided total funding of about \$29 billion to both rural and nonrural counties in fiscal year 1987.

GAO's Approach

Select Rural Development-Type Programs

Provide Data for Each Program on

- 1987 Funding
- Percentage of Funding to Rural Counties

Present by Development Category

Our approach to answering the question "What are rural development-type programs?" was to (1) develop criteria for determining what constitutes a rural development-type program, (2) select programs using these criteria, (3) obtain recent (fiscal year 1987) budgetary data for each program, (4) multiply the fiscal year 1987 budgetary data by the latest (fiscal year 1985) percentage of funding to rural counties (where available), and (5) present data for each program by development category and agency.

Criteria for Selecting Rural Development-Type Programs

Economic Development Focus

- Economic Development
- Ag/Natural Resources
- Infrastructure
- Human Resources

Rural Focus

- More \$ Per Person to Rural (More Than 16% of Prog. \$)
- Rural Objectives/Formula
- Addressing Low Income/High Unemployment of Rural Areas

First, we selected programs on the basis of <u>economic</u> <u>development</u> purposes. (See table 3.1.) We considered programs in the first four development categories—economic development, agriculture/natural resources, infrastructure, and human resources—to fall within a broad definition of economic development. However, we excluded some subcategories of programs in the agriculture/natural resources category (e.g., commodity support programs and conservation programs) and in the human resources category (e.g., criminal justice programs) because programs in these subcategories generally did not have specific economic development objectives. Similarly, programs in the last two categories—general entitlement and special groups (veterans, miners, etc.)—were excluded as generally not having economic development objectives.

Second, we selected programs based on their <u>rural focus</u>, not an exact task because there was seldom a single rural identifier. However, as noted in section 3, we considered a program as having a rural emphasis if more than 16 percent of its funds went directly to rural counties, since 16 percent of the U.S. population lives in

these areas. In addition, we generally used the following criteria to select rural programs:

- -- programs with a rural objective, definition, or formula;
- -- programs addressing conditions, such as high unemployment, low income, and high levels of poverty, that are more prevalent in rural counties; and
- -- programs directed toward small cities or towns.

Guided by the criteria, we generally included as rural development-type programs all federal programs that fell into the economic development and infrastructure categories if rural counties appeared to have a reasonable chance of participating. (This would not be the case for programs limiting eligibility to metropolitan areas or applying only to U.S. territories.)

In the agriculture/natural resources category, we included programs that support forestry and mining, two industries with a heavy rural emphasis. We did not include commodity support programs and conservation programs, which are directed specifically at individual farms, farmers, or crops.

In the human resources category, we included those human resource programs that appeared to be generally related to employment and business development, including community services, vocational education, job training/employment services, community/rural health, and rural housing. In addition, we included some basic education programs that had a rural emphasis or whose rural shares exceeded 16 percent. Many observers believe that education is a long-term investment that should lead to rural development. We did not include such programs as family services, urban health and housing, criminal justice, and arts/humanities programs. To represent rural housing, we selected primarily USDA programs because such programs provided more than 30 percent of their funding directly to rural counties, whereas Department of Housing and Urban Development (HUD) programs generally provided less than 10 percent of their funds directly to rural counties.

In all categories, we excluded research and development and data collection/analysis programs since information on rural shares, when known, showed that rural counties seldom receive funds directly. However, it can be argued that rural counties could benefit from these programs in the long run. We also generally excluded from the tables those programs with funding of less than \$1 million, but if we considered such a program to be an important rural development-type program, we discuss it in the text.

Figures 4.1 through 4.4 depict how we combined the six development categories (across the top) with the rural/nonrural

designations (on the side) to identify rural development-type programs. The shaded blocks represent rural development-type programs in the four primary development categories: economic development, agriculture/natural resources, infrastructure, and human resources. Each figure highlights one of the four categories.

The economic development category, highlighted in figure 4.1, contains 19 rural development-type programs, 9 for small business and 10 for general business development. In fiscal year 1987, this category was dominated by loan programs of about \$3.9 billion; grant programs totaled about \$268 million.

The Small Business Administration (SBA) administers all nine of the small business programs, which provided about \$3.8 billion in loans and about \$42 million in grants in fiscal year 1987. The Small Business Loans Program and the Loans for Small Businesses Program are administered directly by SBA; the other seven programs are administered indirectly through various arrangements between SBA and other organizations. The Small Business Loans Program, SBA's largest program, provided guaranteed loans of about \$2.2 billion in fiscal year 1987; the program did not provide direct loans as it once did. About 18 percent of this program's loans went directly to rural counties in fiscal year 1985, the most recent year for which percentages are available.

The Loans for Small Businesses Program is directed at small businesses owned by low-income persons or located in areas of higher unemployment--target groups not specified in the larger Small Business Loans Program. This program provided guaranteed loans of about \$24 million and direct loans of about \$19 million in fiscal year 1987. In fiscal year 1985, about 13 percent of

guaranteed loans and 8 percent of direct loans went directly to rural counties.

The other seven SBA economic development programs operate indirectly through various, often complex, state, local, and private sector arrangements. The largest such program, Bond Guarantees for Surety Companies, provided about \$957 million in fiscal year 1987 to guarantee surety bonds for small contractors unable to obtain a performance-type bond in the absence of a guarantee. About 16 percent of this program's guarantees were provided directly to rural counties in fiscal year 1985.

Of the two Certified Development Company Loans Programs, the larger section 504 program provided about \$355 million in guaranteed loans to finance long-term fixed assets of small businesses via development companies certified by SBA. SBA obtains funds for this program through the sale of debentures to private investors. Under the 503 program, which provided about \$2 million in direct and guaranteed loans in fiscal year 1987, SBA obtains its funds by selling SBA-guaranteed debentures to the Federal Financing Bank. A rural percentage is available for only the 503 program--about 11 percent; however, this percentage may reflect the location of the development companies rather than the small businesses served.

Small Business Investment Companies (SBIC) make equity and venture capital investments in small businesses. SBA provided direct loans of about \$39 million and guaranteed loans of about \$151 million to licensed SBICs in fiscal year 1987. The fiscal year 1985 rural percentage of less than 3 percent for direct loans (no percentage was available for guaranteed loans) also may reflect the location of the investment companies, not the small businesses served.

In fiscal year 1987, the five economic development programs administered by the Department of Commerce's Economic Development Administration (EDA) provided grants totaling about \$201 million. The Grants for Public Works Program, 1 which provided about

¹We placed this program in the economic development category rather than in the infrastructure category because its purpose is to fund public works and development facilities that directly support economic development.

\$144 million, had a rural share of about 36 percent in fiscal year 1985. The Special Economic Development and Adjustment Assistance Program, which provided grants of \$26 million, had a rural share of about 52 percent in fiscal year 1985. The Support for Planning Organizations Program, which provided grants of about \$19 million, had a 42-percent rural share in fiscal year 1985. Thus the rural shares of these three principal EDA programs, ranging from about 36 to 52 percent, reflect substantial rural participation.

USDA's Business and Industrial Loans Program, established by the Rural Development Act of 1972 (Public Law 92-419), provided about \$96 million in guaranteed loans in fiscal year 1987 and had a rural share of about 35 percent in fiscal year 1985. The loan amount represents an expansion from about \$61 million in 1985. The Nonprofit National Corporations Program, established by the Food Security Act of 1985, provided grants and loans totaling about \$33 million in 1987 to stimulate private investment to improve economic development and employment in rural areas. The Industrial Development Grants Program helps rural communities through grants for such projects as improving and developing industrial sites. These USDA programs are all administered by the Farmers Home Administration (FmHA). Rural shares for these programs were not available.

The Department of Defense (DOD) Procurement Technical Assistance Program supports marketing and technical assistance to firms that sell to DOD (about \$6 million in 1987). The Appalachian Regional Commission's grant program assists multicounty development districts in Appalachia (about \$2 million in 1987). It had a rural share of about 32 percent in fiscal year 1985.

Programs providing assistance in agriculture and natural resources, highlighted in figure 4.2, are the second category of rural development-type programs. As explained previously, however, we excluded certain programs in this category when selecting rural development-type programs. For example, agricultural commodities programs—which provide considerable amounts of federal funds to rural areas—are not primarily oriented to rural development. Similarly, conservation programs are directed primarily at conserving soil and water resources rather than being oriented to rural development. Although such programs are not discussed as rural development—type programs, we have included them in the list of federal programs in appendixes II and III.

The agriculture/natural resources category contains three rural development-type programs, two dealing with forestry and one with mining. In fiscal year 1987, these programs provided about \$84 million in grants and payments.

Forestry and mining programs support industries that provide direct benefits to rural counties. Two USDA forestry programs provided a total of about \$39 million to participants in fiscal year 1987. The Cooperative Forestry Assistance Program, which is administered by the Forest Service and which provided about \$27 million, is directed at nonfederal forest and other rural lands to assist, among other things, in advancing forest resources management, encouraging timber production, and efficiently utilizing wood and wood residues. No rural share was available for this program. The Forestry Incentives Program, administered by the Agricultural Stabilization and Conservation Service, provided direct payments of about \$12 million in fiscal year 1987 for similar purposes. It had a rural share of about 72 percent in fiscal year 1985.

The Department of the Interior program for regulating surface mining provided about \$45 million in fiscal year 1987; no rural share was available for this program. States, Indian tribal agencies, and small coal mine operators are eligible for this program. Program funds may be used for such purposes as preparing state legislative proposals and regulations and contracting with qualified laboratories to provide hydrologic and geologic data on behalf of eligible small coal operators.

The third category of rural development-type programs consists of infrastructure programs oriented to rural areas, as highlighted in figure 4.3. This category includes 30 rural development-type programs that provided grants and payments of about \$6.4 billion, loans of about \$1.6 billion, and other expenditures of about \$3.1 billion in fiscal year 1987. Infrastructure programs include community, transportation, utilities, and public works programs. Nine federal agencies administer infrastructure programs.

The Department of Housing and Urban Development administers five infrastructure/community programs that provided about \$1.2 billion in grants in fiscal year 1987. Four of these programs are components of the Community Development Block Grant Program. While data on rural shares were not available for the State's Program and Special Projects components, the rural shares for the Small Cities and Technical Assistance components in fiscal year 1985 were about 29 percent and 4 percent, respectively. In addition, the Urban Development Action Grants (UDAG) Program had a

rural share of about 7 percent in fiscal year 1985.² The total funding for these five programs fell by about \$388 million from fiscal year 1985 to 1987, the largest decline being about \$253 million for the UDAG program.

USDA has three infrastructure/community programs. The two schools and roads programs, managed by the Forest Service, provide (1) grants to states in which National Forests are located (amount of grants representing 25 percent of National Forest receipts from the previous fiscal year) and (2) grants to counties in which National Grasslands and Land Utilization projects are located (25 percent of previous calendar year's project receipts). The state program, for which a rural share was not available, provided about \$295 million to states in fiscal year 1987. The county program, which provided about \$8 million in fiscal year 1987, had a rural share of about 99 percent in fiscal year 1985. The Community Facilities Loans Program, administered by FmHA, provided about \$96 million in fiscal year 1987; most community infrastructure facilities are eligible under this program, which had a rural share of about 50 percent in fiscal year 1985.

Interior's Outdoor Recreation Program provided grants of about \$47 million in fiscal year 1987. A rural share was not available for this program.

The Department of Education's Impact Aid--Maintenance and Operation Program provided \$685 million in direct payments in fiscal year 1987. It had a rural share of about 33 percent in fiscal year 1985. This program assists local educational agencies in dealing with adverse impacts, such as the opening or closing of nearby large federal installations or recovering from natural disasters. The other Impact Aid Program was funded at about \$23 million in fiscal year 1987; no rural share data were available. It provides assistance in constructing needed minimum school facilities in school districts having substantial increases in school enrollments due to new or increased federal activities or in response to damages caused by a declared major natural disaster. The Department of Education also funded, at \$38 million in fiscal year 1987, a program to assist in constructing, reconstructing, or renovating postsecondary facilities and, at \$22 million, a program to assist in building or modifying public libraries. Rural shares were not available for either program.

²The UDAG program is included as a rural development-type program since it was designed to assist small cities as well as large, using economic criteria reflective of the distressed economic condition of rural communities.

Four Department of Transportation (DOT) grant programs and one DOT payment program provided infrastructure/transportation funding in fiscal year 1987. The Airport Improvement Program provided grants of about \$1 billion for airport planning, construction, and rehabilitation; its rural share was about 9 percent in fiscal year 1985. The total Highway Planning and Construction Program, which had a rural share of about 23 percent in fiscal year 1985, provided about \$12.9 billion in fiscal year 1987 to help fund interstate, primary, and secondary highways. We used the \$460 million in grants for secondary highways to represent the rural portion of this program. The Section 18 program provides grants to improve nonurban public transportation—about \$82 million in fiscal year 1987. A rural share was not available for this program; however, given its title, it is likely to have a strong rural focus.

The Payments for Essential Air Services Program was developed primarily to maintain service to smaller communities following airline deregulation; it provided payments of about \$27 million in 1987 and had about an 11-percent rural share in fiscal year 1985. Similarly, the Local Rail Service Assistance Program, for which a rural share was not available, provided grants to states of about

bData not available.

\$25 million in fiscal year 1987 to help maintain rail lines and services in the face of abandonments and reduced services by railway companies.

The Appalachian Regional Commission has placed a high priority on transportation improvements in its regional development strategy. In fiscal year 1987, grants for highways were about \$72 million and grants for local access roads were about \$2 million. A rural share was not available for either program.

The Rural Electrification Act of 1936, as amended, authorizes the three USDA rural electrification and telephone programs shown in table 4.6. In fiscal year 1987, these programs provided a total of about \$1.1 billion in loans and loan guarantees to local cooperatives, utility companies, and public entities. The percentage shares to rural counties for fiscal year 1985 were about 52 percent for rural electrification, about 67 percent for rural telephone, and about 38 percent for the rural telephone bank.

The Department of Commerce provided about \$19 million in grants in fiscal year 1987 for the Public Telecommunications Facilities--Construction and Planning Program. The program had a rural share of about 12 percent in fiscal year 1985.

Most DOD Corps of Engineers civil works construction, operation, and maintenance activities are not included in the Catalog of Federal Domestic Assistance; thus they are not included in the program descriptions in appendix IV. However, with funding of about \$3.1 billion in fiscal year 1987, the Corps' Civil Works Program is the largest program in the infrastructure/public works category. Information was not available on the rural share for this program, some of whose projects are located in rural counties.

The Environmental Protection Agency's (EPA) Construction Grants for Wastewater Treatment Works Program, which provided about \$2.2 billion in fiscal year 1987, seeks to improve water quality through grants to build or improve local wastewater treatment facilities. In fiscal year 1985, 11 percent of this program's funding went directly to rural counties.

USDA's Water and Waste Disposal Systems for Rural Communities Program, administered by FmHA, provided about \$330 million in

direct loans and about \$118 million in grants in fiscal year 1987. Even though information was not available on the rural share, this program likely has a strong rural focus because eligibility is limited to communities with populations of 10,000 or less.

USDA's other two programs in the infrastructure/public works category, which are administered by the Soil Conservation Service, are also directed at rural communities. The Watershed Protection and Flood Prevention Program, which provided about \$85 million in fiscal year 1987, had a rural share of about 31 percent in fiscal year 1985; the Resource Conservation and Development Program, which provided about \$7 million, had a rural share of about 63 percent.

Interior's Small Reclamation Projects Program provided about \$51 million in fiscal year 1987 to public entities in the 17 westernmost contiguous states and Hawaii for betterment or construction of water resource development projects. A rural share was not available for this program.

The final category of rural development-type programs is human resources, as highlighted in figure 4.4. According to our literature search and interviews, many believe this category is very important to rural development. However, it is not always included in discussions of rural development programs.

The 36 rural development-type programs in the human resources category, which are administered by 8 federal agencies, provided about \$11.4 billion in grants and payments and about \$2.2 billion in loans (all housing) in fiscal year 1987. Included in the human resources category are 4 community services programs, 13 education programs, 6 training and employment programs, 5 health programs, and 8 housing programs. Except for rural housing, very few programs in the human resources category have a specific rural orientation.

The Department of Health and Human Service's Community Services Block Grant (CSBG) programs provide grants for peopleoriented community services as distinguished from HUD's Community Development Block Grant Programs (in the infrastructure category), which are oriented toward physical facilities. The "basic" CSBG Program, \$335 million in fiscal year 1987, allocates funds to states for their administration to communities. The CSBG--Discretionary Awards Program, with about \$30 million awarded in fiscal year 1987, is administered by HHS for community purposes of national or regional significance. Rural share information was not available for either of these programs.

Action's Retired Senior Volunteer Program (RSVP) uses retired volunteers to address community problems and provide community services. RSVP provided about \$30 million in grants in fiscal year 1987 and had a rural share of about 20 percent in fiscal year 1985. EPA's program involves those 55 years old and older in environmental activities. The program, for which information on rural share was not available, provided about \$11 million in grants in fiscal year 1987.

The major community program in fiscal year 1985 -- the Treasury Department's General Revenue Sharing Program--had been eliminated by fiscal year 1987. In fiscal year 1985, this program provided about \$4.6 billion and had a rural share of about 16 percent, the same percentage as rural population.

Vocational education is directly related to employment and economic development. Three Department of Education vocational education programs provided about \$848 million in fiscal year 1987. The two largest programs provided grants to states. Rural share information was not available for any of the three programs. The Higher Education—Cooperative Education Program provides grants to institutions of higher education to plan, establish, expand, and carry out cooperative education projects. Such projects have alternating or parallel periods of academic study and public or private paid employment related to the student's academic program or professional goals. In fiscal year 1987, the program provided about \$14 million in grants. It had a rural share of about 14 percent in fiscal year 1985.

USDA's Extension Service is an educational agency that provides out-of-school, applied education, information, and technology transfer through its state and county network to individuals, families, community organizations, marketing concerns, and others. We placed the Cooperative Extension Service Program, which provided about \$323 million in fiscal year 1987, in the vocational education category although it could have been placed in another category or split among several categories. Although its

main emphasis is rural America, the program's rural share in fiscal year 1985 was only about 6 percent because program funds are provided mainly to the states' land grant colleges, which are generally not in counties designated as rural.

The Appalachian Regional Commission's vocational education program, for which rural share information was not available, provided about \$2 million in fiscal year 1987.

While vocational education provides rural residents with the means to pursue employment and economic development opportunities, general education can also contribute to the economic success of rural counties. The seven Department of Education programs highlighted above each had rural shares of 12 percent or more.

Some education programs provide assistance to local educational agencies or school districts to enhance educational programs for students, while others provide direct assistance to individual students. The Educationally Deprived Children--Local Educational Agencies Program provided about \$3.5 billion in fiscal year 1987 and had a fiscal year 1985 rural share of 19 percent. Program funds are used primarily for providing compensatory instruction to meet the special needs of educationally deprived children.

At the postsecondary level, the Higher Education—
Institutional Aid and Student Support Services Programs assist
eligible colleges and universities or individual students. The
Higher Education—Institutional Aid Program, which provided
\$149 million in fiscal year 1987, had a rural share in fiscal year
1985 of 18 percent. It assists educational institutions to
strengthen their management and fiscal operations and assists in
planning, developing, or implementing activities that promise to
strengthen the institution. The Student Support Services Program,
which provided about \$71 million in fiscal year 1987 and had a
rural share of about 19 percent in fiscal year 1985, seeks to
identify and assist qualified low—income, first—generation college
students or physically handicapped students through such means as
counseling, career guidance, and tutoring.

The Bilingual Education Program, with funding of \$81 million in fiscal year 1987 and a rural share of about 12 percent in fiscal year 1985, seeks to assist schools in providing bilingual education for students who have limited English language proficiency.

Several education programs are aimed at helping children and young people improve their performance both in the early school years and in secondary school and beyond. The Follow Through Program, funded at about \$7 million in fiscal year 1987 and with a fiscal year 1985 rural share of about 16 percent, is aimed toward younger children and continues the educational, health, and nutritional assistance of the Head Start Program (which we classified as a health program--see table 4.12). The Talent Search and Upward Bound Programs have similar objectives in seeking to identify disadvantaged students and assist them in completing secondary, and possibly postsecondary, school. Talent Search, with a 16-percent rural share in fiscal year 1985, provided about \$20 million in fiscal year 1987. For the same periods, Upward Bound provided funds of about \$75 million and had a rural share of about 17 percent.

^aTitle II-A operates on a program year basis; title II-B, on a calendar year basis.

The Department of Labor administers these six training and employment programs, which provided about \$4.1 billion in grants and payments in 1987. Except for the Senior Community Service Employment Program, which had a rural share of less than 1 percent in fiscal year 1985, data were not available on the rural shares of these programs. However, the major program, the Job Training Partnership Act (JTPA), applies a formula to allocate funds both among states and within a state using two measures of unemployment and, as a third measure, the number of economically disadvantaged persons. ERS reports that both unemployment and poverty are higher in rural counties; therefore, we believe that many rural counties should be eligible for funds from this program. In addition, USDA reports that several states have used JTPA funds to provide retraining for displaced or financially stressed farmers and farmworkers in rural areas. The Senior Service Employment Program is classified as a training and employment program rather than as a community service program because the program's emphasis is the training and employment provided rather than the service delivered.

HHS' Head Start Program provided about \$1.1 billion in fiscal year 1987 and had a rural share of about 19 percent in fiscal year 1985. This program is intended to provide comprehensive health, educational, nutritional, social, and other services primarily to economically disadvantaged preschool children. HHS' Community Health Centers Program, which provided about \$420 million in fiscal year 1987, is a principal health program affecting rural counties. This program is to focus on the "most medically-underserved areas." Many observers believe that rural counties generally fall into this category. This program's share to rural counties in fiscal year 1985 was about 16 percent, the same as the population percentage. A related program provided grants of about \$3 million in fiscal year 1987 for technical and nonfinancial assistance to community health centers. A rural share was not available for this program.

The Migrant Health Centers Grants Program, which provided about \$45 million in fiscal year 1987, had a rural share of about 13 percent in fiscal year 1985. Appalachian Health Programs, which had a rural share of 42 percent in fiscal year 1985, provided about \$1 million in fiscal year 1987.

Two health programs, which are not listed above, but which serve or are intended to serve rural areas, are Rural Health Policy/Research Centers and National Health Service Corps. The Rural Health Policy/Research Centers Program (no. 13.155), authorized by Public Law 100-202, is intended "... to provide an information base and policy analysis capacity on the full range of

rural health issues." This program was not funded in fiscal year 1987. However, the <u>Catalog of Federal Domestic Assistance</u> estimated obligations for this program at \$1.4 million for fiscal year 1988 and \$1.5 million for fiscal year 1989.

The National Health Service Corps Program (no. 13.258) assigns medical personnel to areas of the country where critical shortages exist. It may also provide loans to communities to help in establishing medical, dental, or other health professions practices; acquiring equipment; and renovating buildings. In fiscal year 1987, obligations for program salaries and expenses were about \$37 million; no loans were provided. However, loans of \$10,000 were provided in each of fiscal years 1985 and 1986, and \$479,000 and \$50,000, respectively, in loans are estimated for fiscal years 1988 and 1989.

USDA's Farmers Home Administration supports rural housing through grants, payments, and loans. Rural share data, available on four of the programs, show that the programs provided relatively high shares to rural counties (30 to 63 percent). On the other hand, most HUD housing programs provided rural shares under 10 percent. (See apps. II and III.) Thus, housing programs are essentially split between USDA for rural housing and HUD for urban housing.

USDA's Very Low- and Low-Income Housing Loans Program, which had a rural share in fiscal year 1985 of about 52 percent, provided \$1.2 billion in fiscal year 1987. In the same year, the Rural Rental Housing Program provided about \$555 million for constructing, repairing, and improving rentals. Its rural share in fiscal year 1985 was about 45 percent. The Rural Rental Assistance Payments Program provided about \$275 million in fiscal year 1987 to

reduce the rental payments of low-income families. Information on rural share was not available for this program.

HUD's Property Improvement Loan Insurance Program provided insured loans of about \$497 million in fiscal year 1987; its fiscal year 1985 rural share was 18 percent. This program is intended to assist borrowers in financing alterations, repairs, and improvements of existing structures and the building of new nonresidential structures that substantially protect or improve the basic livability or utility of the properties.

SECTION 5

OBSERVATIONS

As discussed in this briefing report, relatively few federal programs pursue rural development as a primary objective. However, as discussed in section 4, a number of existing programs are important to rural America because they are aimed toward addressing some of the problems common to rural areas (such as dislocated workers or poverty). If increased attention to rural development is seen as a goal, existing programs could be restructured and/or supplemented to increase benefits directed toward rural America.

As shown in section 4, USDA has the most experience of all federal agencies in providing assistance to rural America. USDA has the greatest number of rural development-type programs; it is the only agency with programs in each of the four major development categories; and it provides the greatest amount of domestic funding directly to rural areas. In addition, USDA is responsible for administering statutory provisions in rural development legislation. Therefore, if a new rural development policy, such as that suggested by the proposed Rural Development Reorganization Act is desired, USDA appears to be the agency best qualified to implement such a policy.

U.S. COUNTIES, BY BEALE CODE

As discussed in section 2, Beale codes were developed by the Economic Research Service to depict population concentrations for all counties in the United States. Each county is assigned to 1 of 10 Beale codes shown below. This appendix lists the Beale codes of all 3,096 U.S. counties, which are arranged alphabetically by state and county.

Beale Definition code Nonrural counties 0 Central counties of metropolitan areas of 1 million population or more 1 Fringe counties of metropolitan areas of 1 million population or more 2 Counties in metropolitan areas of 250,000 to 1 million population 3 Counties in metropolitan areas of less than 250,000 population 4 Urban population of 20,000 or more, adjacent to a metropolitan area 5 Urban population of 20,000 or more, not adjacent to a metropolitan area Rural counties 6 Urban population of less than 20,000, adjacent to a metropolitan area 7 Urban population of less than 20,000, not adjacent to a metropolitan area 8 Completely rural, adjacent to a metropolitan area 9 Completely rural, not adjacent to a metropolitan area

Note: Metropolitan status is that announced by the Office of Management and Budget in June 1983, when the current population criteria were first applied to results of the 1980 Census. Adjacency was determined by physical boundary adjacency and a finding that at least 2 percent of the employed labor force in the nonmetropolitan county commuted to metropolitan central counties.

FEDERAL DOMESTIC ASSISTANCE PROGRAMS, BY AGENCY, FOR FISCAL YEARS 1985 AND 1987

This appendix provides information on all programs in our data base. The programs are grouped by agency and divided into two parts: (1) those providing grants, direct payments, and other expenditures and (2) those providing loans and insurance.

The first column shows the economic development code, which we developed, for each program. These codes are discussed in section 3 and listed in table 3.1 of the report.

Columns two and three provide the program number and object code, where available, as shown in the <u>Catalog of Federal Domestic Assistance</u>. Object codes are as follows: A--formula grants; B--project grants; C--direct payments for specified use; D--direct payments with unrestricted use; E--direct loans; F--guaranteed/insured loans; G--insurance.

Program titles, shown in column four, were obtained primarily from the fiscal year 1988 Catalog or, if not in that Catalog, from the fiscal year 1986 Catalog. The amounts in columns five and six, unless otherwise noted, were obtained from the Catalogs for fiscal years 1986 and 1988, respectively.

The rural share (column seven) was computed by multiplying the fiscal year 1985 rural percentage in the "Percent rural" column by the amount in the "Catalog FY87 total" column. Rural percentages (column eight) were obtained from information developed by the Economic Research Service from the Consolidated Federal Funds Report for fiscal year 1985. Column nine provides footnote references both for the entire appendix and for specific programs.

The subtotals were derived by adding the individual amounts shown for the respective agency's programs for fiscal years 1985 and 1987 and the rural share for 1987. "1987 total dollars for programs with rural shares" is the fiscal year 1987 sum for only those agency programs that had entries in the "Percent rural" column. "Percent of program funds to rural counties," a composite percentage for each agency, was derived by dividing the agency's rural share "Subtotal" by "1987 total dollars for programs with rural shares."

a. Each time the "Percent rural" column is empty, it signifies that the subject program was not included in the CFFR. Therefore, USDA could not develop Beale codes for the program, and we could not calculate the rural percentage to determine what part of program funds went to rural areas. The "Rural share" column will also be blank for such programs.

- b. This program did not appear in the 1986 Catalog, which was our source of program information for fiscal year 1985-
- c. According to the Catalog, this program was added in 1986. Funding is included in the total for program 14-156 and is not separately identified.
- d. The catalog does not provide financial data for this program.
- e. According to the Catalog, this figure includes obligations for programs 14.851 and 14.852-
- for According to the Catalog, obligations for this program are reported under program 14.850.
- g. This program does not appear in the 1988 Catalog, which was our source of program information for fiscal year 1987. The Catalog indicates that the program has been deleted.
- h. According to the Catalog, obligations for this program are reported under program \$1.300.
- -- According to the 1988 Catalog, this is the current name for this program. It also states that fiscal year 1987 obligations are not separately identifiable.
- J. The Catalog showed only "Salaries and Expenses," not grants, payments, or loans for this program.
- K. According to the Catalog, their program was part of program II.800 through 1985; therefore, the fiscal year 1985 obligations for this program are reported under program II.800.
- 1. This program does not appear in the Catalog. However, it is an important rural development-type program. We have, therefore, included information obtained from the U.S. Budget Appendix.
- The N/A means that an overall rural percentage could not be calculated for the agency.
- n. The 1988 Catalog indicates that fiscal year 1987 obligations for this program are reported (and not separately identifiable) under program 30-002.
- O. According to the 1988 Catalog, this program was incorporated in program 47.071 in 1987.
- p. This program primarily funds salaries and expenses for government workers. However, in both fiscal years 1985 and 1986, it made loans of \$10,000. No loans were made in fiscal year 1987, but the 1988 Catalog estimated loans of about \$479,000 for fiscal year 1989 and about \$50,000 for fiscal year 1989.
- q. According to the Catalog, obligations (loans) for this program are included under program 14.142.
- r. According to the Catalog, obligations (mortgages insured) for this program are reported under program 14-126
- 5. According to the Catalog, the obligations (mortgages insured) shown for this program include funding for programs 14.119 and 14.121.
- t. According to the Catalog, obligations (mortgages insured) for this program are reported under program 14-117.
- u. According to the Catalog, the obligations (mortgages insured) shown for this program include funding for programs 14-124 and 14-135. In fiscal year 1987, no mortgages were insured for programs 14-124 and 14-126 and no units were insured for program 14-132. Cumulative totals through September 50, 1987, were 512 projects with 70,401 units insured with a value of \$963.6 million for programs 14-124 and 14-126 and 33,918 home mortgages insured with a value of \$429.6 million for program 14-132.
- v. According to the Catalog, obligations (mortgages insured) for this program are reported under program 14-134-
- w- According to the Catalog, obligations (mortgages insured) for this program are include funding for program 14-127-
- x. According to the Catalog, obligations (mortgages insured) for this program are reported under program 14-137-
- y. According to the Catalog, the obligations (mortgages insured) shown for this program include funding for program 14-135. Because of this combination, a consolidated share percentage was computed using information from the CEFR.

z. According to the Catalog, the obligations (loans insured) shown for this program include funding for programs 14-110 and 14-162. Because of this combination, a consolidated share percentage was computed using information from the CEFR.

- at. The amounts shown for this program may include obligations for other than loans; the Catalog does not provide a preaxout to this program.
- ag. The Catalog states that for fiscal year 1987, obligations (loans) for this program are included in program 59,008.

FEDERAL DOMESTIC ASSISTANCE PROGRAMS, BY DEVELOPMENT CATEGORY, FOR FISCAL YEARS 1985 AND 1987

This appendix groups program data, for all programs in our data base, by development category; it was the source of programs discussed in section 4. The programs are divided into two parts: those providing grants, direct payments, and other expenditures and those providing loans and insurance.

The first column shows the economic development code for each program. These codes are discussed in section 3 and listed in table 3.1.

Columns two and three provide the program number and object code, where available, as shown in the <u>Catalog of Federal Domestic Assistance</u>. Object codes are as follows: A--formula grants; B--project grants; C--direct payments for specified use; D--direct payments with unrestricted use; E--direct loans; F--guaranteed/insured loans; G--insurance. Program titles, shown in column four, were obtained primarily from the fiscal year 1988 Catalog or, if not in that Catalog, from the fiscal year 1986 Catalog.

Column five shows the agency administering the program. The abbreviations are explained in the table of contents. The amounts in columns six and seven, unless otherwise noted, were obtained from the Catalogs for fiscal years 1986 and 1988, respectively.

The rural share (column eight) was computed by multiplying the fiscal year 1985 rural percentage in the "Percent rural" column by the amount in the "Catalog FY87 total" column. Rural percentages (column nine) were obtained from information developed by the Economic Research Service from the Consolidated Federal Funds Report for fiscal year 1985. Column ten provides footnote references both for the entire appendix and for specific programs.

The subtotals for each of the six development categories were derived by adding the individual amounts shown for the respective development category's programs for fiscal years 1985 and 1987 and the rural share for 1987. "1987 total dollars for programs with rural shares" is the fiscal year 1987 sum for only those programs that had entries in the "Percent rural" column. "Percent of program funds to rural counties," a composite percentage for each development category, was derived by dividing the category's rural share "Subtotal" by "1987 total dollars for programs with rural shares."
