# LAND OWNERSHIP 

Information on the Acreage, Management, and Use of Federal and Other Lands

United States
General Accounting Office
Washington, D.C. 20548

## Resources, Community, and <br> Economic Development Division

B-270582
March 13, 1996
The Honorable Don Young
Chairman, Committee on Resources
House of Representatives

The Honorable Richard Pombo House of Representatives

Over the years, the Congress has discussed the federal government's ownership, management, and use of lands in the United States, as well as the effects of federal (primarily environmental) regulations on the use of both public and nonfederal lands. In response to your request for information on these topics, we reported to you in January 1995 on changes in the amount of federally owned land and in the acreage managed for conservation. ${ }^{1}$

As you requested, this report updates our earlier work through September 1994 with the latest data available. Specifically, it provides information on changes in (1) the ownership of the lands managed by the four primary federal land management agencies-the U.S. Department of Agriculture's Forest Service and the Department of the Interior's Bureau of Land Management, Fish and Wildlife Service, and National Park Service-from June 1964 through September 1994 and (2) the number of acres managed for conservation. This report also includes information on the (1) nonfederal acreage that is subject to federal rights-of-use such as easements and leases, (2) acreage held in trust for Indians, (3) acreage owned by 13 selected western states, ${ }^{2}$ and (4) acreage involved in the land transactions of three nonprofit organizations-the Nature Conservancy, The Conservation Fund, and The Trust for Public Land. ${ }^{3}$ Appendix I contains, among other things, supplemental information on (1) the means by which the four federal agencies acquired acreage and their plans for acquiring additional acreage, (2) federal acreage where hunting is not allowed, and (3) nonfederal acreage affected by selected environmental regulations.

[^0]Data from the four major federal land management agencies show that the total acreage under their management decreased from about 700.8 million acres to about 622.8 million acres between June 1964 and September 1994. Of the 622.8 million acres, about 272 million acres ( 43.7 percent) were managed primarily for conservation and thus had some limitations on their use.

Information on the acreage subject to federal rights-of-use, held in trust for Indians, owned by states, and involved in the land transactions of selected nonprofit organizations showed the following:

- As of September 1994, the federal government had obtained rights-of-use for about 3 million acres of nonfederal land.
- The federal government held about 52.3 million acres in trust for individual Indians and Indian tribes in 1995.
- Thirteen western states collectively owned about 142 million acres.
- The three nonprofit organizations transferred (by selling, donating, or exchanging) about 3.2 million acres to other public and private entities between 1964 and September 1994.

The federal government owns about 30 percent of the nation's total surface area (about 650 million acres). Four major federal land management agencies-the Forest Service, Bureau of Land Management, Fish and Wildlife Service, and National Park Service-are responsible for managing about 95 percent of these lands. The Department of Defense manages most of the remainder.

Each of the four major federal land management agencies manages its lands and the resources they contain on the basis of its mission and responsibilities. The Forest Service and the Bureau of Land Management manage lands for a variety of uses, including recreation, timber harvesting, livestock grazing, oil and gas production, mining, and wilderness protection. The Fish and Wildlife Service manages lands primarily to conserve and protect fish and wildlife and their habitat, although other uses, such as hunting and fishing, are allowed when they are compatible with the primary purposes for which the lands are managed. The National Park Service manages lands to conserve, preserve, protect, and interpret the nation's natural, cultural, and historic resources.

## Federal Acreage and Acreage Managed for Conservation

The acreage managed by the four major federal land management agencies decreased by 78 million acres, from about 700.8 million acres to about 622.8 million acres, between June 30, 1964, and September 30, 1994. The change in the total number of acres managed by the four land management agencies during this 30 -year period is shown in figure 1 .

Figure 1: Acreage Managed by the Four Federal Agencies, Fiscal Years 1964 and 1994

$\square$
1964
1994

As we reported earlier, the overall decrease in the number of acres managed during this period occurred because a significant number of the acres managed by the Bureau of Land Management were transferred to other federal land management agencies, to Alaska, and to Native Alaskans. The number of acres managed by the Forest Service, Fish and Wildlife Service, and National Park Service increased, while the number of acres managed by the Bureau of Land Management decreased. In total, the
acreage managed by the four agencies as of September 30, 1994, represented about 26.6 percent of the nation's acreage.

The acreage managed by these agencies increased over the 30 -year period in 46 states and decreased in 4 states. Figure 2 shows the percentage change in the acreage managed by the four agencies, by state, between mid-1964 and September 30, 1994. Appendix I provides data on the acreage managed by each of the four agencies, by state, as of mid-1964 and September 30, 1994.

Figure 2: Change in the Percentage of Federal Acres Managed by the Four Federal Agencies Between June 1964 and September 1994

Over the period, the number of acres managed by the four agencies primarily for conservation increased from about 66 million acres to about 272 million acres. This total includes all of the lands managed by the Fish and Wildlife Service and National Park Service, as well as portions of the lands managed by the Forest Service and Bureau of Land Management. Table 1 provides information on the number of acres and the percentage of federal acreage managed for conservation as of June 30, 1964, and September 30, 1994. Tables I. 3 through I. 5 in appendix I provide more detailed information on the federal acreage managed for conservation.

Table 1: Number and Percentage of Acres Managed for Conservation by the Four Federal Agencies, Fiscal Years 1964 and 1994

|  | Forest Service | Bureau of Land Management | Fish and Wildlife Service | National Park Service | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |

> Acreage Included in Federal Rights-of-Use, Held in Trust for Indians, Owned by States, and Involved in Nonprofits' Land Transactions

As of September 30, 1994, the four federal agencies had obtained rights-of-use to over 3 million acres of nonfederal land through leases, agreements, permits, and easements. Generally, these rights-of-use are obtained from owners of nonfederal lands to support the management of adjacent federal lands. For example, easements can be obtained to provide members of the public with access to federal lands. Table 2 summarizes the acreage associated with the various rights-of-use obtained by these agencies. Tables I. 9 through I. 12 in appendix I provide details on the number of acres to which each agency has obtained rights-of-use in each state.

Table 2: Nonfederal Acres for Which the Four Federal Agencies Had Rights-of-Use as of September 30, 1994

|  | Type of right-of-use |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Acreage | Leases | Agreements | Permits | Easements | Total |  |
| Number of <br> acres | 171,244 | 642,200 | 66,965 | $2,120,291$ | $3,000,700$ |  |
| Percentage of <br> acres | 5.7 | 21.4 | 2.2 | 70.7 | 100.0 |  |

Source: GAO's analysis of data provided by the departments of Agriculture and the Interior.

In addition, other lands are held in trust for Indians, are owned by states, and have been acquired and subsequently transferred to others by nonprofit organizations, as the following data show:

- Lands held in trust by the federal government for individual Indians and Indian tribes totaled about 52.3 million acres in 1995. These lands were located in 33 states. Table II. 1 in appendix II provides data on the number of acres held in trust in each of the 33 states where Indian lands are located.
- Thirteen western states collectively owned about 141.9 million acres as of September 30, 1994. Table III. 1 in appendix III shows the acreage owned by each of the 13 states.

Collectively, from July 1964 through September 1994, three nonprofit organizations-the Nature Conservancy, The Conservation Fund, and The Trust for Public Land-transferred about 3.2 million acres to others from their holdings through sales, donations, and exchanges. Table 3 shows the acreage involved in each organization's land transactions. More detailed information on the land transactions of these organizations is contained in appendix IV.

Table 3: Acreage Involved in the Land Transactions of Three Major Nonprofit Organizations Between July 1, 1964, and September 30, 1994

| The Trust for Public Land |  | $606,883^{b}$ | 585,205 | 21,678 |  |  |

[^1]
# Agencies' Comments and Our Evaluation 

The Department of the Interior's Bureau of Land Management, Fish and Wildlife Service, National Park Service, and Bureau of Indian Affairs and the U.S. Department of Agriculture's Forest Service provided oral comments on a draft of this report. Generally, the agencies agreed that the information provided in the report was accurate. On the basis of their comments, we incorporated technical corrections and clarifying information into this report where appropriate.

Fish and Wildlife Service officials told us that the vast majority of the increase in that agency's acreage from 1964 to 1994 resulted from additions to the national wildlife refuge system in Alaska. These lands were transferred from the Bureau of Land Management upon enactment of the Alaska National Interest Lands Conservation Act. We refer in appendix I to two major land transfers from the Bureau of Land Management to the Fish and Wildlife Service that expanded the national wildlife refuge system in Alaska.

The Chief of the National Park Service's Land Resources Division commented that the Service does not increase the acreage of the National Park System; that is done by the Congress or by presidential proclamation. We have included this information in appendix I.

We performed our work from February 1995 through February 1996 in accordance with generally accepted government auditing standards. We did not independently verify the data provided by the various agencies, states, and organizations. A complete discussion of our objectives, scope, and methodology is contained in appendix V .

As requested, unless you publicly announce its contents earlier, we plan no further distribution of this report until 30 days after the date of this letter. At that time, we will make copies available to interested congressional committees and Members of Congress; the Secretaries of Agriculture and the Interior; Interior's Assistant Secretary, Indian Affairs; the Chief of the Forest Service; the Directors of the Bureau of Land Management, Fish and Wildlife Service, and National Park Service; the Director, Office of Management and Budget; and other interested parties. We will also provide copies to others upon request.

Please call me at (202) 512-3841 if you or your staff have any questions about this report. Major contributors to this report are listed in appendix VI.

## Changes in Acreage and Use of Lands Managed by Four Federal Agencies

#### Abstract

This appendix provides information on changes in federal land ownership and on the percentage of each state's acreage managed by the four major federal land management agencies. In addition, it provides information on the federal acreage managed for conservation, acreage acquired by the four agencies between June 30, 1964, and September 30, 1994, and acreage the agencies plan to acquire in future years. It also provides information on the federal acreage where hunting and other activities are not allowed, nonfederal acreage for which the agencies have obtained rights-of-use, and nonfederal acreage affected by selected environmental regulations.

The acreage managed by the four federal land management agencies decreased by 78 million acres during the 30 -year period. Table I. 1 shows the changes in the acreage managed by the four federal agencies.

Note:The information shown on the acreage managed by the four federal land management agencies is as of the following dates: for 1964, as of June 30, 1964; for 1994, as of September 30, 1994
${ }^{\text {a }}$ According to Bureau of Land Management officials, the Bureau's 1.1 million acre increase from 1964 to 1994 for 11 eastern states (Alabama, Arkansas, Florida, Illinois, Iowa, Louisiana, Michigan, Minnesota, Mississippi, Missouri, and Wisconsin) did not result from land acquisitions but reflected the addition in 1986 of withdrawn public lands that had not been previously inventoried and accounted for by the Bureau.

Source: GAO's analysis of data provided by the departments of Agriculture and the Interior.

As table I. 1 shows, during the 30 -year period, three of the agencies-the Forest Service, Fish and Wildlife Service, and National Park Service-increased the number of federal acres that they managed: the Forest Service by over 5 million acres, the Fish and Wildlife Service by about 65 million acres, and the National Park Service by about 49 million acres. According to Fish and Wildlife Service and Park Service officials, these increases occurred primarily as the result of congressional authorization or executive order. The Bureau of Land Management decreased its holdings by 197 million acres during the period, primarily because a significant portion of the over 113 million acres transferred to
the state of Alaska and to Native Alaskans was under its management. In addition, two major transfers of land to the Fish and Wildlife
Service-12 million acres in 1979 and about 37 million acres in 1980-expanded the national wildlife refuge system. In 1979, the Bureau of Land Management also transferred about 41 million acres of land to the National Park Service to expand existing, or create new, national parks, monuments, and preserves.

During the 30 -year period, the number of acres managed by the four federal agencies increased in 46 states and decreased in 4 states. As table I. 1 shows, for five states-Arizona, California, Florida, Nevada, and Wyoming - the amount of federally managed land increased by at least 1 million acres during the 30-year period. The amount of federally managed land decreased during this period in Alaska, Idaho, New Mexico, and Utah.

## Percentage of Each State's Acreage Managed by the Four Federal Agencies

As of September 30, 1994, the four federal agencies managed about 622.8 million acres, or 26.6 percent of the 2.3 billion-acre surface area of the United States. Table I. 2 shows the percentage and amount of each state's acreage managed by the four federal agencies.

Table I.2: Percentage of Each State's Acreage Managed by the Four Federal Agencies as of September 30, 1994

Over 75 percent

## Appendix I

Changes in Acreage and Use of Lands
Managed by Four Federal Agencies

As table I. 2 and figure I. 1 show, the percentage of each state's acreage managed by the four federal agencies varies widely. For example, the agencies manage less than 5 percent of the land in 26 states but over 50 percent in 5 states. Over 80 percent of Nevada's acreage is managed by the four agencies.

## Acreage Managed for Conservation

Of the 622.8 million acres managed by the four agencies as of September 30, 1994, over 272 million acres were managed primarily for conservation. Lands managed for conservation include, among other things, national parks, national wildlife refuges, wilderness and wilderness study areas, wild and scenic rivers, and areas of critical environmental concern. Table I. 3 shows the number of acres and the percentage of land managed by the four agencies for conservation, by state, as of September 30, 1994.

Table I.3: Number and Percentage of Acres Managed for Conservation by the Four Federal Agencies, by State, as of September 30, 1994

Note: Totals may not add because of rounding.
a"Other" includes acreage acquired through condemnation and takings.

As table I. 6 shows, the lands acquired by the four agencies through purchase accounted for nearly half of all the acres acquired during the 30 -year period.

As of September 30, 1994, the four agencies planned to acquire about 11.8 million acres in future years. Table I. 7 shows the acreage, by state, that the four agencies planned to acquire in subsequent years.

Table I.7: Acquisitions Planned by the Four Agencies, by State, in Subsequent Years

Source: The departments of Agriculture and the Interior.

According to agency officials, the planned acquisitions include land to be acquired by the agencies as new areas (such as refuges), additions to existing areas, or privately owned lands (inholdings) within areas that the agencies manage.

Data provided by the Forest Service and the National Park Service showed inholdings of approximately 40 million acres and about 4.3 million acres, respectively. According to Forest Service and National Park Service officials, their agencies do not plan to acquire all of the inholdings. For example, Forest Service officials told us that their plans are to acquire about 10 percent of the inholdings within the National Forest System. The Bureau of Land Management and Fish and Wildlife Service could not provide us with information on the total acreage of the inholdings within their areas in a useable format in the requested time frame. However, like the Forest Service and National Park Service, Bureau and Fish and Wildlife Service officials told us that their agencies do not plan to acquire all of the inholdings.

## Federal Acreage Where Hunting and Other Activities Are Not Allowed

The four federal agencies did not allow hunting on 57.5 million of the acres they managed as of September 30, 1994. Included in this total are over 50.6 million acres managed by the National Park Service, about 4.6 million acres managed by the Fish and Wildlife Service, and almost 2 million acres managed by the Forest Service. Table I. 8 shows, by state, the number of acres managed by the Forest Service, Bureau of Land Management, and National Park Service where hunting is not allowed. The Fish and Wildlife Service could not provide the number of acres, by state, where hunting is not allowed.

Note: Acreage totals may not add because of rounding.
Source: GAO's analysis of data provided by the departments of Agriculture and the Interior.

As part of our work, we also requested the four agencies to provide data on the number of acres that had various limitations on use, such as restrictions on oil and gas development, mineral development, livestock grazing, and timber harvesting. Fish and Wildlife Service and National Park Service officials told us that these activities are generally not allowed on the lands these agencies manage. However, officials from both agencies indicated that some or all of these activities may be allowed in specific locations if required by legislative mandates, if rights to conduct these activities existed before the lands were acquired by the federal agency, or if the activities are determined to be compatible with the primary purpose for which the lands are managed.

Forest Service and the Bureau of Land Management officials told us that restrictions on the use of the lands they manage are identified in specific land management plans. Such restrictions vary by area and are

## Appendix I

Changes in Acreage and Use of Lands
Managed by Four Federal Agencies
continuously changing as land management plans are revised and updated. Our review of the data provided by these agencies indicated that as of September 30, 1994,

- mineral development was not allowed on about 2.6 million acres managed by the Forest Service and
- oil and gas development was not allowed on 77.3 million acres, mineral development was not allowed on 90.5 million acres, and grazing was not allowed on 20.6 million acres of Bureau of Land Management lands that were not managed for conservation.

Agency officials pointed out that more than one of these activities may be prohibited on the same lands.

In addition to managing federal lands, the four federal agencies had rights-of-use for 3 million acres of nonfederal land as of September 30, 1994. These rights-of-use were obtained through easements, leases, agreements, and permits. Tables I. 9 through I. 12 show, for each of the four agencies, the number of acres included in the various rights-of-use, by state.

## Nonfederal Acreage Affected by Selected Environmental Regulations

Officials from the U.S. Army Corps of Engineers, Environmental Protection Agency, and Fish and Wildlife Service, the primary agencies responsible for implementing regulations under the Clean Water Act and the Endangered Species Act, told us that their respective agencies did not maintain information on the number of privately owned acres whose uses may be limited by the regulations implementing these acts. In general, however, privately owned land containing a wetland or habitat considered essential to the survival of a protected species could be subject, under these regulations, to prohibitions against certain actions that would modify the wetland or habitat. For example, designating critical habitat for a protected species under the Endangered Species Act would identify lands containing habitat that may require special management or protection. On the basis of the regulations establishing critical habitat, about 1.1 million acres of privately owned land had been included in the critical habitat designations for 31 species. Nearly all of this acreage had been designated as critical habitat for the desert tortoise.

## Acreage Held in Trust for Individual Indians and Indian Tribes

| The federal government holds 52.3 million acres in trust for individual |
| :--- | :--- |
| Indians and Indian tribes in 33 states. Table II.1 shows the number of acres |
| held in each state for this purpose. |

Table II.1: Acreage Held in Trust for Individual Indians and Indian Tribes, by State, in 1995

## Appendix II <br> Acreage Held in Trust for Individual Indians <br> and Indian Tribes

Note: This acreage includes federal trust, tribal/restricted fee, and/or government lands. Federal trust lands are those whose title is held by the United States in trust for individual Indians or Indian tribes. Tribal/restricted fee lands are those whose title is held by individual Indians or tribes. Government lands consist of a small amount of acreage owned by the United States for special uses such as federal schools and hospitals for Native Americans and for administrative offices.

The amount of acreage was provided as of November 7, 1995, for Alabama, Connecticut, Florida, Louisiana, Maine, Massachusetts, Mississippi, New York, North Carolina, Rhode Island, and South Carolina. The amount of acreage for the remaining states was as of September 15, 1995.

## Lands Acquired by Three Nonprofit Organizations

Generally, the three nonprofit organizations in our review acquire parcels of land for conservation and then sell, donate, or exchange the parcels to entities such as federal, state, and local governments. Tables IV. 1 to IV. 3 show the amount of acreage acquired, transferred, and owned by these organizations - the Nature Conservancy, The Conservation Fund, and The Trust for Public Land.

Table IV.1: Acreage Transactions for the Nature Conservancy, by State, From July 1, 1964, Through September 30,1994

Note: The Trust for Public Land was incorporated on May 5, 1972; it had no acres on hand as of that date.
${ }^{\text {a }}$ These acres were transferred to a regional water management district within Florida.
Source: The Trust for Public Land.

As tables IV. 1 to IV. 3 show, the three nonprofit organizations transferred about 3.2 million acres to federal, state, or local governments or to other conservation organizations or individuals through sales, donations, or exchanges during the 30 -year period.

# Objectives, Scope and Methodology 

The Chairman of the House Committee on Resources and Representative Richard Pombo asked us to obtain information on the

- changes in federal land ownership and the number of acres with limitations on their use;
- means by which the federal government acquires land, and the acreage it plans to acquire;
- federal acreage where hunting and other activities are not allowed;
- number of privately owned acres subject to federal regulatory control; and
- number of nonfederal acres to which the federal government has obtained rights-of-use, such as easements.

In addition, the Committee asked us to obtain information on the acreage

- held in trust for individual Indians and Indian tribes,
- owned by 13 western states, and
- involved in the land transactions of nonprofit organizations.

To fulfill these objectives, we interviewed officials and obtained and reviewed relevant documents and other data from five agencies-the U.S. Department of Agriculture's Forest Service and the Department of the Interior's Bureau of Land Management, Fish and Wildlife Service, National Park Service, and Bureau of Indian Affairs. We also obtained computerized data files from the agencies and agencies' reports on the lands they managed. As agreed with the requesters' offices, we did not verify the completeness, accuracy, and reliability of the data maintained in the agencies' databases. Such verification would require a significant investment of time and resources because the database contained an immense volume of data. We did, however, take steps to reconcile inconsistencies in the data contained in the agencies' computerized data files and printed reports. We interviewed senior-level land management officials at each of these agencies' headquarters as well as at selected field locations.

We were unable to identify credible sources of data on how much private property is subject to federal regulatory controls. Hence, we limited our review to information on the extent to which wetland determinations under the Clean Water Act and critical habitat designations under the Endangered Species Act have affected private lands. The results of this work are limited because data were unavailable.

To determine the number of acres owned by the states, we identified 12 western states-Alaska, Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming-where the federal government owns at least 25 percent of the state's acreage. In addition, we were asked to include Texas. We sent a survey to the official in each state who was responsible for managing the state's land. When the data were not centrally located, we contacted other state officials within these states for information on acreage. State officials in most of the states said that the number of acres was estimated or derived from the best available data.

We obtained information on the acreage that three nonprofit conservation organizations-the Nature Conservancy, The Conservation Fund, and The Trust for Public Lands-had acquired and transferred to federal, state, and/or local governments and others. We selected these organizations because they were the nonprofit organizations that had transferred the most acreage to one or more of the four federal land management agencies during the 1990s.

We attempted to use the statistics published by the General Services Administration on the acreage managed by each federal agency ${ }^{1}$ but found that these data were not current or reliable.

This report does not include information on U.S. territories, insular possessions, or the District of Columbia.

## Ordering Information

The first copy of each GAO report and testimony is free. Additional copies are $\$ 2$ each. Orders should be sent to the following address, accompanied by a check or money order made out to the Superintendent of Documents, when necessary. VISA and MasterCard credit cards are accepted, also. Orders for 100 or more copies to be mailed to a single address are discounted 25 percent.

Orders by mail:
U.S. General Accounting Office
P.O. Box 6015

Gaithersburg, MD 20884-6015
or visit:
Room 1100
700 4th St. NW (corner of 4th and G Sts. NW)
U.S. General Accounting Office

Washington, DC
Orders may also be placed by calling (202) 512-6000 or by using fax number (301) 258-4066, or TDD (301) 413-0006.

Each day, GAO issues a list of newly available reports and testimony. To receive facsimile copies of the daily list or any list from the past 30 days, please call (202) 512-6000 using a touchtone phone. A recorded menu will provide information on how to obtain these lists.

For information on how to access GAO reports on the INTERNET, send an e-mail message with "info" in the body to:
