Intergovernmental Transfers Have Facilitated State Financing Schemes

What GAO Found

For many years states have used varied financing schemes, sometimes involving IGTs, to inappropriately increase federal Medicaid matching payments. Some states, for example, receive federal matching funds on the basis of large Medicaid payments to certain providers, such as nursing homes operated by local governments, which greatly exceed established Medicaid rates. In reality, the large payments are often temporary, since states can require the local-government providers to return all or most of the money to the states. States can use these funds—which essentially make a round-trip from the states to providers and back to the states—at their own discretion.

States’ financing schemes undermine the federal-state Medicaid partnership, as well as the program’s fiscal integrity, in at least three ways.

- The schemes effectively increase the federal matching rate established under federal law by increasing federal expenditures while state contributions remain unchanged or even decrease. GAO estimated that one state effectively increased the federal matching share of its total Medicaid expenditures from 59 percent to 68 percent in state fiscal year 2001, by obtaining excessive federal funds and using these as the state’s share of other Medicaid expenditures.

- There is no assurance that these increased federal matching payments are used for Medicaid services, since states use funds returned to them via these schemes at their own discretion. In examining how six states with large schemes used the federal funds they generated, GAO found that one state used the funds to help finance its education programs, and others deposited the funds into state general funds or other special state accounts that could be used for non-Medicaid purposes or to supplant the states’ share of other Medicaid expenditures.

- The schemes enable states to pay a few public providers amounts that well exceed the costs of services provided, which is inconsistent with the statutory requirement that states ensure economical and efficient Medicaid payments. In one state, GAO found that the state’s proposed scheme increased the daily federal payment per Medicaid resident from $53 to $670 in six local-government-operated nursing homes.

Although Congress and the Centers for Medicare & Medicaid Services have acted to curtail financing schemes when detected, problems persist. States can still claim excessive federal matching funds for payments exceeding public facilities’ actual costs. GAO suggests that Congress consider a recommendation open from prior work, that is, to prohibit Medicaid payments that exceed actual costs for any government-owned facility.
