DIGITAL TELEVISION TRANSITION

Preliminary Information on Initial Consumer Education Efforts

What GAO Found

A number of federal and private stakeholders have begun consumer education campaigns, with both independent and coordinated efforts underway. FCC has taken several steps to promote consumer awareness, such as launching a Web site, participating in events intended to educate the public, and requiring sellers of televisions to include consumer alerts on non-digital televisions. NTIA has created brochures in English and Spanish to provide the public information about its converter box subsidy program and is partnering with organizations to perform outreach to disadvantaged groups. Earlier this year, the DTV Transition Coalition was launched to help ensure that no consumer is left without broadcast television due to a lack of information. Over 160 private, public, and non-profit groups have joined the Coalition to coordinate consumer education efforts.

While widespread and comprehensive consumer education efforts have yet to be implemented, various efforts are currently being planned. FCC, NTIA, and private sector stakeholders have plans to further educate consumers as the DTV transition nears. For example, voluntary public service announcements to raise awareness of the transition are planned by industry groups and FCC is considering requiring broadcasters, manufacturers and cable and satellite providers to insert various messages and alerts in their products and programming. In addition, the converter box subsidy program will have a consumer education component. Because many education efforts are in the planning or early stages of implementation, it is too early to tell how effective these efforts will be.

Various factors make consumer education difficult. While private sector stakeholders are participating in outreach efforts, these actions are voluntary and therefore the government cannot be assured of the extent of private sector efforts. Strategic communications experts from industry, government, and academia identified potential challenges to a consumer education campaign, including (1) prioritizing limited resources to target the right audience, (2) educating consumers to help protect them from making unnecessary purchases, (3) reaching underserved populations, and (4) aligning stakeholders to form a consistent, coordinated effort.

GAO has work planned to assess the progress of consumer awareness. In particular, GAO plans to conduct a series of surveys to determine the population affected by the DTV transition, levels of awareness about the transition, and demographic information about the affected population. Throughout the transition, GAO will continue to monitor government and industry education efforts and analyze these efforts relative to best practices for consumer education campaigns. GAO plans to review the government’s responsibility for consumer education, monitor the outcome of FCC’s rulemaking related to consumer education, and collect details of the consumer education component of the converter box subsidy program.
