Testimony
Before the Subcommittee on Oversight and Investigations, Committee on Financial Services, House of Representatives

FINANCIAL SERVICES INDUSTRY

Overall Trends in Management-Level Diversity and Diversity Initiatives, 1993-2006

Statement of Orice M. Williams, Director
Financial Markets and Community Investment
FINANCIAL SERVICES INDUSTRY

Overall Trends in Management-Level Diversity and Diversity Initiatives, 1993-2006

What GAO Found

GAO’s June 2006 report found that, from 1993 through 2004, overall diversity at the management level in the financial services industry did not change substantially, but some racial/ethnic minority groups experienced more change in representation than others. EEOC data show that management-level representation by minority women and men increased overall from 11.1 percent to 15.5 percent during the period (see fig. below). Specifically, African-Americans increased their representation from 5.6 percent to 6.6 percent, Asians from 2.5 percent to 4.5 percent, Hispanics from 2.8 percent to 4.0 percent, and American Indians from 0.2 percent to 0.3 percent. In preparation for this testimony, GAO collected EEOC data for 2006, which shows that diversity at the management level in the financial services industry remained about the same as it had in previous years.

Financial services firms and trade groups have initiated programs to increase workforce diversity, but these initiatives face challenges. The programs include developing scholarships and internships, partnering with groups that represent minority professionals, and linking managers’ compensation with their performance in promoting a diverse workforce. Some firms have developed indicators to measure progress in achieving workforce diversity. Industry officials stated that among the challenges these initiatives face are recruiting and retaining minority candidates, as well as gaining the “buy-in” of key employees, such as the middle managers who are often responsible for implementing such programs. Without a sustained commitment to overcoming these challenges, diversity at the management level may continue to remain generally unchanged over time.

Mr. Chairman and Members of the Subcommittee:

I am pleased to be here today to discuss the results of our June 2006 study on diversity in the management level in the financial services industry, as well as more recent information that we have gathered on this important topic. As you know, the U.S. workforce has become increasingly diverse over the last several decades. As the composition of the workforce has changed, many private and public sector organizations have recognized the importance of recruiting and retaining minority and women candidates for key positions. In a 2005 report on diversity management, we stated that workforce diversity can benefit organizations in a variety of ways, such as by allowing them to better meet the needs of a diverse customer base, reducing the costs associated with employee turnover, and increasing staff morale. However, this subcommittee and others have raised concerns about workforce diversity in the financial services industry, which provides key services necessary to help ensure the continued growth and economic prosperity of the country. In hearings held by this subcommittee in 2004 and 2006, some witnesses stated that financial services firms—banks and securities firms, for example—have not made sufficient progress in recruiting and retaining minorities and women at the management level.

In my testimony, I will summarize the key findings from our work, which has sought to collect, analyze, and report data and information that provide insights into diversity in the financial services industry. Specifically, I will discuss (1) what the available data show about diversity at the management level in the financial services industry from 1993 through 2006 and (2) the types of initiatives that the financial services

1GAO, Financial Services Industry: Overall Trends in Management-Level Diversity and Diversity Initiatives, 1993-2004, GAO-06-617 (Washington, D.C.: June 1, 2006). For purposes of this testimony, we focused the diversity discussion on changes in management-level representation over time by gender and racial/ethnic minority groups, including African-Americans, Asians, Hispanics, and American Indians.

industry and related organizations have taken to promote workforce
diversity and the challenges involved.

To prepare our June 2006 report, we used the Equal Employment
Opportunity Commission’s (EEOC) Employer Information Report (EEO-1)
data on financial services firms with 100 or more employees for the period
from 1993 through 2004. The EEO-1 data provide information on
racial/gender representation for various occupations, including “officials
and managers,” for a broad range of industries, including financial
services. In updating our work in preparation for this testimony, we
collected and analyzed EEO-1 data for financial services firms with 100 or
more employees for 2006. We cannot conduct a direct and continuous
trend analysis of changes in the representation of minorities and women at
the management level in the financial services industry between 2004 and
2006 because the 2006 data is based on an updated system for classifying
industries. However, the 2006 EEO-1 representation data for the financial
services industry can generally be compared with the EEO-1 data for 2004
and prior years. Our work has also involved reviewing reports on the state
of workforce diversity and initiatives to increase the representation of
minority and women in financial services firms. We have also interviewed
academics and officials from a variety of financial services firms and trade
and professional groups.

We performed this performance audit in Washington, D.C., in January
2008, in accordance with generally accepted government auditing
standards. Those standards require that we plan and perform the audit to
obtain sufficient, appropriate evidence to provide a reasonable basis for
our findings and conclusions based on our audit objectives. We believe
that the evidence obtained provides a reasonable basis for our findings
and conclusions based on our audit objectives.

4We used the EEO-1 “officials and managers” job category as the basis for our discussion of
management-level diversity within the financial services industry. EEOC defines the job
category of “officials and managers” as occupations requiring administrative and
managerial personnel who set broad policies, exercise overall responsibility for execution
of these policies, and direct individual departments or special phases of a firm’s operation.

5Our June 2006 report describes our approach to reporting the 1993 through 2004 EEO-1
data, which used the Standard Industry Classification System (SIC). In preparing for this
testimony, EEOC said that the previous approach would not be reliable for the 2006 EEO-1
data because the SIC has become increasingly unreliable over time and has been replaced
by the North American Industrial Classification System.
In brief:

From 1993 through 2006, overall workforce diversity at the management level in the financial services industry did not change substantially, but some racial/ethnic minority groups experienced more change in representation than others. As described in our June 2006 report, EEO-1 data show that overall management-level representation by minority women and men increased from 11.1 percent to 15.5 percent from 1993 through 2004. Specifically, African-Americans increased their representation from 5.6 percent to 6.6 percent, Asians from 2.5 percent to 4.5 percent, Hispanics from 2.8 percent to 4.0 percent, and American Indians from 0.2 percent to 0.3 percent. Representation by white women remained constant at slightly more than one-third during this period, while representation by white men declined from 52.2 percent to 47.2 percent.

EEO-1 data also show that representation by minorities and women at the management level was about the same in 2006 as it had been in previous years. For example, African-Americans and Asians represented about 6.4 percent and 5.0 percent, respectively, of all financial services managers in 2006. Moreover, the EEO-1 data show that depository institutions, such as commercial banks and insurance companies, have generally been more diverse at the management level over the years than securities firms.

Although financial services firms and trade groups have initiated programs to increase workforce diversity, these initiatives face challenges that may help explain why overall diversity at the management level has not changed substantially. Officials at financial services firms said that diversity was an important goal and that top leadership was committed to recruiting and retaining minority and women candidates. Some financial services firms have established scholarship and internship programs or partnered with groups that represent minority professionals. Officials from a few firms told us that they had begun linking managers’ compensation and performance in promoting workforce diversity, and some firms had developed indicators (e.g., representation by minorities and women in key positions) to measure progress in achieving workforce diversity. Industry officials said that, among the challenges these initiatives faced were recruiting and retaining minority candidates, as well as gaining the “buy-in” of key employees, such as the middle managers who were often

---

As mentioned previously, it is not possible to directly conduct a trend analysis due to changes in collecting and reporting EEO-1 data from the 2004 to 2006 period. However, the 2006 EEO-1 data can generally be compared with the EEO-1 data from 2004 and earlier years.
responsible for implementing such programs. Without a sustained commitment to overcoming these challenges, diversity at the management level in the financial services industry may continue to remain generally unchanged over time.

Background

We defined the financial services industry to include the following sectors:

- depository credit institutions, which include commercial banks, thrifts (savings and loan associations and savings banks), and credit unions;

- holdings and trusts, which include investment trusts, investment companies, and holding companies;

- nondepository credit institutions, which extend credit in the form of loans, and which include federally sponsored credit agencies, personal credit institutions, and mortgage bankers and brokers;

- the securities sector, which is made up of a variety of firms and organizations (e.g., broker-dealers) that bring together buyers and sellers of securities and commodities, manage investments, and offer financial advice; and

- the insurance sector, including carriers and insurance agents that provide protection against financial risks to policyholders in exchange for the payment of premiums.

The financial services industry is a major source of employment in the United States. EEO-1 data showed that the financial services firms we reviewed for this work, which have 100 or more staff, employed nearly 3 million people in 2004. Moreover, according to the U.S. Bureau of Labor Statistics, employment in the financial services industry was expected to grow at a rate of 1.4 percent annually from 2006 through 2016.
Diversity in the Financial Services Industry at the Management Level Did Not Change Substantially

EEO-1 data for 1993 through 2006 generally do not show substantial changes in representation by minorities and women at the management level in the financial services industry, but some racial/ethnic minority groups experienced more change in representation than others. Figure 1, which is based on information that we obtained in preparation for our June 2006 report, shows that overall management-level representation by minorities increased from 11.1 percent to 15.5 percent from 1993 through 2004. Specifically, African-Americans increased their representation from 5.6 percent to 6.6 percent, Asians from 2.5 percent to 4.5 percent, Hispanics from 2.8 percent to 4.0 percent, and American Indians from 0.2 to 0.3 percent. Management-level representation by white women was largely unchanged at slightly more than one-third during the period, while representation by white men declined from 52.2 percent to 47.2 percent.

GAO-06-617.
As shown in figure 2, EEO-1 data also show that the depository and nondepository credit sectors, as well as the insurance sector, were somewhat more diverse at the management level than the securities and holdings and trust sectors. In 2004, minorities held 19.9 percent of management-level positions in nondepository credit institutions, such as mortgage banks and brokerages, but 12.4 percent in holdings and trusts, such as investment companies.
In preparation for this testimony, we contacted EEOC to obtain and analyze EEO-1 for 2006 and found that diversity remained about the same at the management level in the financial services industry (see fig. 3) as it had in previous years. For example, the 2006 EEO-1 data show that African-Americans and Asians represented about 6.4 percent and 5.0 percent, respectively, of all financial services managers in 2006. In addition, the 2006 EEO-1 data show that commercial banks and insurance

---

*As mentioned previously, it is not possible to directly conduct a trend analysis due to changes in collecting and reporting EEO-1 data from the 2004 to 2006 period. However, the 2006 data can generally be compared with the financial services industry as a whole from 2004 and previous years.*
companies continued to have higher representation by minorities and women at the management level than securities firms.

Figure 3: EEO-1 Data in Workforce Diversity in the Financial Services Industry at the Management Level by Racial/Ethnic Group and Gender (2006)

Note: Percentages may not always add up to 100 due to rounding.

However, it is important to keep in mind that EEO-1 data may actually overstate representation levels for minorities and white women in the most senior-level positions, such as Chief Executive Officers of large investment firms or commercial banks, because the category that captures these positions—“officials and managers”—covers all management positions. Thus, this category includes lower-level positions (e.g., Assistant Manager of a small bank branch) that may have a higher representation of minorities and women. Recognizing this limitation, starting in 2007, EEOC revised its data collection form for employers to divide the “officials and managers” category into two subcategories: “executive/senior-level officers and managers” and “first/midlevel officials.” We hope that the increased level of detail will provide a more accurate picture of diversity among senior managers in the financial services industry over time.
However, it is too soon to assess the impact of this change on diversity measures at the senior management level.

Initiatives to Promote Workforce Diversity in the Financial Services Industry Face Challenges

Officials from the firms that we contacted said that their top leadership was committed to implementing workforce diversity initiatives, but they noted that making such initiatives work was challenging. In particular, the officials cited ongoing difficulties in recruiting and retaining minority candidates and in gaining employees’ “buy-in” for diversity initiatives, especially at the middle management level.

Financial Services Firms Have Implemented a Variety of Diversity Initiatives

Minorities’ rapid growth as a percentage of the overall U.S. population, as well as increased global competition, have convinced some financial services firms that workforce diversity is a critical business strategy. Since the mid-1990s, some financial services firms have implemented a variety of initiatives designed to recruit and retain minority and women candidates to fill key positions. Officials from several banks said that they had developed scholarship and internship programs to encourage minority students to consider careers in banking. Some firms and trade organizations have also developed partnerships with groups that represent minority professionals and with local communities to recruit candidates through events such as conferences and career fairs. To help retain minorities and women, firms have established employee networks, mentoring programs, diversity training, and leadership and career development programs.

Industry studies have noted, and officials from some financial services firms we contacted confirmed, that senior managers were involved in diversity initiatives. Some of these officials also said that this level of involvement was critical to success of a program. For example, according to an official from an investment bank, the head of the firm meets with all minority and female senior executives to discuss their career development. Officials from a few commercial banks said that the banks had established diversity “councils” of senior leaders to set the vision, strategy, and direction of diversity initiatives. A 2005 industry trade group study and some officials also noted that some companies were linking
managers’ compensation with their progress in hiring, promoting, and retaining minority and women employees.\(^9\)

A few firms have also developed performance indicators to measure progress in achieving diversity goals. These indicators include workforce representation, turnover, promotion of minority and women employees, and employee satisfaction survey responses. Officials from several financial services firms stated that measuring the results of diversity efforts over time was critical to the credibility of the initiatives and to justifying the investment in the resources such initiatives demanded.

Several Challenges May Have Affected the Success of Workforce Diversity Initiatives in the Financial Services Industry

While financial services firms and trade groups we contacted had launched diversity initiatives, officials from these organizations, as well as other information, suggest that several challenges may have limited the success of their efforts. These challenges include the following:

- **Recruiting minority and women candidates for management development programs.** Available data on minority students enrolled in Master of Business Administration (MBA) programs suggest that the pool of minorities, a source that may feed the “pipeline” for management-level positions within the financial services industry and other industries, is relatively small.\(^10\) In 2000, minorities accounted for 19 percent of all students enrolled in MBA programs in accredited U.S. schools; in 2006, that student population had risen to 25 percent. Financial services firms compete for this relatively small pool not only with one another but also with firms from other industries.

- **Fully leveraging the “internal” pipeline of minority and women employees for management-level positions.** As shown in figure 4, there are job categories within the financial services industry that generally have more overall workforce diversity than the “official and managers” category, particularly among minorities. For example, minorities held 22 percent of “professional” positions in the industry in 2004 as compared

\(^10\)Association to Advance Collegiate Schools of Business, the world’s largest accreditation association for business schools, conducts an annual survey called “Business School Questionnaire” of all its accredited schools. Participation in this survey is voluntary. For the year 2006, the most recent year, 94.3 percent of the accredited schools responded to the survey.
with 15 percent of “officials and managers” positions. According to a 2006 EEOC report, the professional category represented a possible pipeline of available management-level candidates.\textsuperscript{11} The EEOC report states that the chances of minorities and women (white and minority combined) advancing from the professional category into management-level positions is lower when compared with white males.

\end{table}

Source: GAO analysis of EEOC data.

Note: Percentages may not always add to 100 due to rounding.

- \textit{Retaining minority and women candidates that are hired for key management positions.} Many industry officials said that financial services firms lack a critical mass of minority men and women, particularly in

senior-level positions, to serve as role models. Without a critical mass, the
officials said that minority or women employees may lack the personal
connections and access to informal networks that are often necessary to
navigate an organization’s culture and advance their careers. For example,
an official from a commercial bank we contacted said he learned from
staff interviews that African-Americans believed that they were not
considered for promotion as often as others partly because they were
excluded from informal employee networks needed for promotion or to
promote advancement.

- Achieving the “buy-in” of key employees, such as middle managers.
  Middle managers are particularly important to the success of diversity
  initiatives because they are often responsible for implementing key
  aspects of such initiatives and for explaining them to other employees.
  However, some financial services industry officials said that middle
  managers may be focused on other aspects of their responsibilities, such
  as meeting financial performance targets, rather than the importance of
  implementing the organization’s diversity initiatives. Additionally, the
  officials said that implementing diversity initiatives represents a
  considerable cultural and organizational change for many middle
  managers and employees at all levels. An official from an investment bank
told us that the bank has been reaching out to middle managers who
oversaw minority and women employees by, for example, instituting an
“inclusive manager program.”

In closing, despite the implementation of a variety of diversity initiatives
over the past 15 years, diversity at the management level in the financial
services industry has not changed substantially. Further, diversity at the
most senior management positions within the financial services industry
may be lower than the overall industry management diversity statistics I
have discussed today. While EEOC has taken steps to revise the EEO-1
data to better assess diversity within senior positions, this data may not be
available for some period of time. Initiatives to promote management
diversity at all levels within financial services firms appear to face several
key challenges, such as recruiting and retaining candidates and achieving
the “buy-in” of middle managers. Without a sustained commitment to
overcome these challenges, management diversity in the financial services
industry may continue to remain generally unchanged over time.

Mr. Chairman, this concludes my prepared statement. I would be pleased
to respond to any questions you or other Members of the Subcommittee
may have.

GAO’s Mission
The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO’s commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony
The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO’s Web site (www.gao.gov). Each weekday, GAO posts newly released reports, testimony, and correspondence on its Web site. To have GAO e-mail you a list of newly posted products every afternoon, go to www.gao.gov and select “E-mail Updates.”

Order by Mail or Phone
The first copy of each printed report is free. Additional copies are $2 each. A check or money order should be made out to the Superintendent of Documents. GAO also accepts VISA and Mastercard. Orders for 100 or more copies mailed to a single address are discounted 25 percent. Orders should be sent to:

U.S. Government Accountability Office
441 G Street NW, Room LM
Washington, DC 20548

To order by Phone: Voice: (202) 512-6000
