What GAO Found

GAO’s June 2006 report found that, from 1993 through 2004, overall diversity at the management level in the financial services industry did not change substantially, but some racial/ethnic minority groups experienced more change in representation than others. EEOC data show that management-level representation by minority women and men increased overall from 11.1 percent to 15.5 percent during the period (see fig. below). Specifically, African-Americans increased their representation from 5.6 percent to 6.6 percent, Asians from 2.5 percent to 4.5 percent, Hispanics from 2.8 percent to 4.0 percent, and American Indians from 0.2 percent to 0.3 percent. In preparation for this testimony, GAO collected EEOC data for 2006, which shows that diversity at the management level in the financial services industry remained about the same as it had in previous years.

Financial services firms and trade groups have initiated programs to increase workforce diversity, but these initiatives face challenges. The programs include developing scholarships and internships, partnering with groups that represent minority professionals, and linking managers’ compensation with their performance in promoting a diverse workforce. Some firms have developed indicators to measure progress in achieving workforce diversity. Industry officials said that among the challenges these initiatives face are recruiting and retaining minority candidates, as well as gaining the “buy-in” of key employees, such as the middle managers who are often responsible for implementing such programs. Without a sustained commitment to overcoming these challenges, diversity at the management level may continue to remain generally unchanged over time.
