FUTURE YEARS DEFENSE PROGRAM

Actions Needed to Improve Transparency of DOD's Projected Resource Needs

Why GAO Did This Study
Congress needs the best available data about DOD's resource trade-offs between the dual priorities of transformation and fighting the global war on terrorism. To help shape its priorities, in 2001 DOD developed a capabilities-based approach focused on how future adversaries might fight, and a risk management framework to ensure that current defense needs are balanced against future requirements. Because the Future Years Defense Program (FYDP) is DOD's centralized report providing DOD and Congress data on current and planned resource allocations, GAO assessed the extent to which the FYDP provides Congress visibility over (1) projected defense spending and (2) implementation of DOD's capabilities-based defense strategy and risk management framework.

What GAO Found
The FYDP provides Congress with mixed visibility over DOD's projected spending for the current budget year and at least four succeeding years. On the one hand, it provides visibility over many programs that can be aggregated so decision makers can see DOD's broad funding priorities by showing shifts in appropriation categories. On the other hand, in some areas DOD likely understates the future costs of programs in the FYDP because it has historically employed overly optimistic planning assumptions in its budget formulations. As such, DOD has too many programs for the available dollars, which often leads to program instability, costly program stretch-outs, and delayed program termination decisions. Also, the FYDP does not reflect costs of ongoing operations funded through supplemental appropriations. Since September 2001, DOD has received $158 billion in supplemental appropriations to support the global war on terrorism, and DOD expects to request another supplemental in January 2005 to cover operations in Iraq and Afghanistan. While DOD officials stated they are uncertain of the amount of the request, some requirements they intend to fund with the supplemental appropriation have already been identified, such as temporaril increasing the Army's force structure. Defining costs during ongoing operations is challenging and supplemental appropriations are sometimes necessary; however, not considering the known or likely costs of ongoing operations expected to continue into the new fiscal year as part of larger budget deliberations will preclude DOD and congressional decision makers from fully examining the budget implications of the global war on terrorism.

What GAO Recommends
GAO makes recommendations to provide Congress more data in fiscal year 2005 and beyond on known or likely costs of operations, and to enhance the FYDP as a tool in the new strategic environment. In comments on a draft report, DOD stated it already provides reliable information on known costs of ongoing operations to Congress as soon as it is available, and did not concur with the proposal to enhance the FYDP. GAO believes its recommendations offer practical solutions that would provide better information for congressional decision-makers to use during budget deliberations.
