NO CHILD LEFT BEHIND ACT

EDUCATION'S DATA IMPROVEMENT EFFORTS COULD STRENGTHEN THE BASIS FOR DISTRIBUTING TITLE III FUNDS

What GAO Found

Education used ACS data to distribute Title III funds, but measurement issues with both ACS and state data could result in funding differences. Education used ACS data primarily because state data were incomplete. In September, Education officials told us they were developing plans to clarify instructions for state data submissions to address identified inconsistencies. While Education officials expected their efforts to improve the quality of the data, they told us that they had not established criteria or a methodology to determine the relative accuracy of the two data sources. State data represent the number of students with limited English proficiency assessed annually for English proficiency, and ACS data are based in part on responses to subjective English ability questions from a sample of the population. ACS data showed large increases and decreases in numbers of these students from 2003 to 2004 in part due to sample size. ACS data and state counts of students with limited English proficiency for the 12 study states differed (see graph). GAO’s simulation of the distribution of Title III funds for fiscal years 2005 and 2006 based on these numbers showed that there would be differences in how much funding states would receive.

Percentage Differences between State-Reported Data (2004-05) and 2004 ACS Data in 12 Study States

In fiscal year 2006, Congress authorized over $650 million in Title III funding for students with limited English proficiency—an increase of over $200 million since fiscal year 2001 under NCLBA. This increase in funding as well as the change in how funds are distributed—from a primarily discretionary grant program to a formula grant program—contributed to more districts receiving federal funding to support students with limited English proficiency since the enactment of NCLBA. States and school districts used Title III funds to support programs and activities including language instruction and professional development. Education provided oversight and support to states. Officials from 5 of the 12 study states reported overall satisfaction with the support from Education. However, some officials indicated that they needed more guidance in certain areas, such as developing English language proficiency assessments that meet NCLBA's requirements. Education is taking steps to address issues states identified.
