What GAO Found

Agencies involved in the FMS program have made some changes in the program but have not corrected the weaknesses GAO previously identified in the FMS program’s shipment verification process, and the expanded monitoring program lacks written guidance to select countries to visit to ensure compliance with requirements. State—which is responsible for the program and approving FMS sales—has not finalized proposed regulatory revisions to establish DOD’s role in the FMS shipment verification process, although the FMS agencies reached agreement on the proposed revisions about a year ago. DHS port officials, responsible for export enforcement, also continue to lack information needed to verify that FMS shipments are properly authorized. GAO found six FMS agreements that had unauthorized shipments, including missile components. In one case, 21 shipments were made after the agreement was closed. At the same time, DOD, which administers the FMS program and FMS agreements, lacks mechanisms to fully ensure that foreign governments receive their correct FMS shipments—in part because DOD does not track most FMS shipments once they leave its supply centers and continues to rely on FMS customers to notify the department when a shipment has not been received. With regard to monitoring defense articles once in country, DOD does not have written guidance to prioritize selecting countries for compliance visits using a risk management approach and has not yet visited several countries with a high number of uninventoried defense articles.

DOD lacks information needed to effectively administer and oversee the FMS program. For example, within the last 10 years DOD has twice adjusted the surcharge rate—the rate charged to FMS customers to cover program administration costs—but it does not have information on program costs to determine the balance necessary to support the program in the future. Also, while DOD has a goal to release 80 percent of FMS agreements to a foreign government within 120 days of receiving its request to purchase defense articles, DOD officials stated they do not have the information needed to determine if the goal is reasonable. In addition, DOD lacks information to oversee the program, in large part due to the fact that FMS data reside in 13 different accounting, financial, and case implementation systems. DOD is in the process of defining its requirements for FMS program information before it moves forward with improving its data systems. In the meantime, DOD is relying on systems that do not provide it with sufficient, comparable data to oversee the program’s performance.

What GAO Recommends

GAO is making recommendations to State, DOD, and DHS to improve the procedures, processes and information critical for shipment verification, monitoring, and administering the FMS program. State and DHS concurred; DOD concurred with two recommendations and partially concurred with three. GAO believes all recommendations remain valid.
