

Highlights of [GAO-12-801T](#), a testimony before the Subcommittee on Oversight and Investigations, Committee on Energy and Commerce, House of Representatives

Why GAO Did This Study

GAO has designated Medicare as a high-risk program. Since 1990, every two years GAO has provided Congress with an update on this program, which highlights government operations that are at high risk for waste, fraud, abuse mismanagement or in need of broad reform. Medicare has been included in this program in part because its complexity makes it particularly vulnerable to fraud. Fraud involves an intentional act or representation to deceive with the knowledge that the action or representation could result in gain. The deceptive nature of fraud makes its extent in the Medicare program difficult to measure in a reliable way, but it is clear that fraud contributes to Medicare's fiscal problems. Reducing fraud could help rein in the escalating costs of the program.

This statement focuses on the progress made and important steps to be taken by CMS and its program integrity contractors to reduce fraud in Medicare. These contractors perform functions such as screening and enrolling providers, detecting and investigating potential fraud, and identifying improper payments and vulnerabilities that could lead to payment errors. This statement is based on relevant GAO products and recommendations issued from 2004 through 2012 using a variety of methodologies, such as analyses of Medicare claims, review of relevant policies and procedures, and interviews with officials.

Progress Made to Deter Fraud, but More Could Be Done

What GAO Found

The Centers for Medicare & Medicaid Services (CMS)—the agency that administers Medicare—has made progress in implementing several key strategies GAO identified in prior work as helpful in protecting Medicare from fraud; however, important actions that could help CMS and its program integrity contractors combat fraud remain incomplete.

Provider Enrollment: GAO's previous work found persistent weaknesses in Medicare's enrollment standards and procedures that increased the risk of enrolling entities intent on defrauding the program. CMS has strengthened provider enrollment—for example, in February 2011, CMS designated three levels of risk—high, moderate, and limited—with different screening procedures for categories of providers at each level. However, CMS has not completed other actions, including implementation of some relevant provisions of the Patient Protection and Affordable Care Act (PPACA). Specifically, CMS has not (1) determined which providers will be required to post surety bonds to help ensure that payments made for fraudulent billing can be recovered, (2) contracted for fingerprint-based criminal background checks, (3) issued a final regulation to require additional provider disclosures of information, and (4) established core elements for provider compliance programs.

Pre- and Post-payment Claims Review: GAO had previously found that increased efforts to review claims on a prepayment basis can prevent payments from being made for potentially fraudulent claims, while improving systems used by CMS and its contractors to review claims on a post-payment basis could better identify patterns of potentially fraudulent billing for further investigation. CMS has controls in Medicare's claims-processing systems to determine if claims should be paid, denied, or reviewed further. These controls require timely and accurate information about providers that GAO has previously recommended that CMS strengthen. GAO is currently examining CMS's new Fraud Prevention System, which uses analytic methods to examine claims before payment to develop investigative leads for Zone Program Integrity Contractors (ZPIC), the contractors responsible for detecting and investigating potential fraud. Additionally, CMS could improve its post-payment claims review to identify patterns of fraud by incorporating prior GAO recommendations to develop plans and timelines for fully implementing and expanding two information technology systems it developed.

Robust Process to Address Identified Vulnerabilities: Having mechanisms in place to resolve vulnerabilities that lead to erroneous payments is critical to effective program management and could help address fraud. Such vulnerabilities are service- or system-specific weaknesses that can lead to payment errors—for example, providers receiving multiple payments as a result of incorrect coding. GAO has previously identified weaknesses in CMS's process for addressing identified vulnerabilities and the Department of Health and Human Services' Office of Inspector General recently reported on CMS's inaction in addressing vulnerabilities identified by its contractors, including ZPICs. GAO is evaluating the current status of the process for assessing and developing corrective actions to address vulnerabilities.
