ELECTRONIC HEALTH RECORDS

VA and DOD Need to Support Cost and Schedule Claims, Develop Interoperability Plans, and Improve Collaboration

What GAO Found

The Departments of Veterans Affairs (VA) and Defense (DOD) abandoned their plans to develop an integrated electronic health record (iEHR) system and are instead pursuing separate efforts to modernize or replace their existing systems in an attempt to create an interoperable electronic health record. Specifically, in February 2013, the secretaries cited challenges in the cost and schedule for developing the single, integrated system and announced that each department would focus instead on either building or acquiring similar core sets of electronic health record capabilities, then ensuring interoperability between them. However, VA and DOD have not substantiated their claims that the current approach will be less expensive and more timely than the single-system approach. Major investment decisions—including terminating or significantly restructuring an ongoing program—should be justified using analyses that compare the costs and schedules of alternative proposals. Yet, the departments have not developed revised cost and schedule estimates for their new modernization efforts and any additional efforts needed to achieve interoperability between the new systems, and compared them with the relevant estimates for their former approach. In the absence of such a comparison, VA and DOD lack assurance that they are pursuing the most cost-effective and timely course of action for delivering the fully interoperable electronic health record the departments have long pursued to provide the best possible care for service members and veterans.

The departments have initiated their separate system efforts. VA intends to deploy clinical capabilities of its new system at two locations by September 2014, and DOD has set a goal of beginning deployment of its new system by the end of fiscal year 2016. However, the departments have yet to update their joint strategic plan to reflect the new approach or to disclose what the interoperable electronic health record will consist of, as well as how, when, and at what cost it will be achieved. Without plans that include the scope, lines of responsibility, resource requirements, and an estimated schedule for achieving an interoperable health record, VA, DOD, and their stakeholders may not have a shared understanding of how the departments intend to address their common health care business needs.

What GAO Recommends

GAO recommends that VA and DOD develop and compare the estimated cost and schedule of their current and previous approaches to creating an interoperable electronic health record and, if applicable, provide a rationale for pursuing a more costly or time-consuming approach. GAO also recommends that the departments develop plans for interoperability and ensure the IPO has control over needed resources and clearer lines of authority. VA and DOD concurred with GAO’s recommendations.
