**MEDICARE**

**Increasing Hospital-Physician Consolidation**

**Highlights Need for Payment Reform**

**Why GAO Did This Study**

Medicare expenditures for hospital outpatient department (HOPD) services have grown rapidly in recent years. Some policymakers have raised questions about whether this growth may be attributed to services that were typically performed in physician offices shifting to HOPDs. GAO was asked to examine trends in vertical consolidation and its effects on Medicare.

This report examines, for years 2007 through 2013, (1) trends in vertical consolidation between hospitals and physicians and (2) the extent to which higher levels of vertical consolidation were associated with more E/M office visits being performed in HOPDs. GAO analyzed, using various methods including regression analyses, the most recent available claims data from CMS and survey data from the American Hospital Association, in which hospitals report the types of financial arrangements they have with physicians.

**What GAO Recommends**

In order to prevent the shift of services from lower paid settings to the higher paid HOPD setting from increasing costs for the Medicare program and beneficiaries, Congress should consider directing the Secretary of the Department of Health and Human Services (HHS) to equalize payment rates between settings for E/M office visits—and other services that the Secretary deems appropriate—and to return the associated savings to the Medicare program. HHS provided technical comments on a draft of this report, which GAO incorporated as appropriate.

**What GAO Found**

Vertical consolidation is a financial arrangement that occurs when a hospital acquires a physician practice and/or hires physicians to work as salaried employees. The number of vertically consolidated hospitals and physicians increased from 2007 through 2013. Specifically, the number of vertically consolidated hospitals increased from about 1,400 to 1,700, while the number of vertically consolidated physicians nearly doubled from about 96,000 to 182,000. This growth occurred across all regions and hospital sizes, but was more rapid in recent years. After hospitals and physicians vertically consolidate, services performed in physician offices, such as evaluation & management (E/M) office visits, can be classified as being performed in hospital outpatient departments (HOPD). Medicare often pays providers at a higher rate when the same service is performed in an HOPD rather than in a physician office. For example, in 2013, the total Medicare payment rate for a mid-level E/M office visit for an established patient was $51 higher when the service was performed in an HOPD instead of a physician office.
