INDIAN HEALTH SERVICE

Actions Needed to Improve Oversight of Quality of Care

What GAO Found

The Indian Health Service’s (IHS) oversight of the quality of care provided in its federally operated facilities has been limited and inconsistent. While some oversight functions are performed at the headquarters level, the agency has delegated primary responsibility for the oversight of care to nine area offices. Area officials stated that the oversight they provide has included, for example, holding periodic meetings with facility staff, reviewing available quality performance data and reviewing adverse events. However, GAO found that this oversight was limited and inconsistent across IHS facilities, due in part to a lack of agency-wide quality of care standards. Specifically, GAO found:

- variation in the frequency of governing board meetings and the extent to which quality was a standing agenda item at these meetings;
- limited and inconsistent reporting of quality data across IHS areas and facilities; and
- inconsistent reporting of adverse events at federally operated facilities.

These inconsistencies are also exacerbated by significant turnover in area leadership. Officials from four of the nine area offices in our review reported that they each had at least three area directors in the past five years. According to IHS officials, the agency has not defined contingency or succession plans for the replacement of key personnel, including area directors. IHS’s lack of agency-wide quality of care standards and lack of contingency and succession plans for key personnel are inconsistent with federal internal control standards. These standards suggest that agencies should establish and review performance standards and then monitor data to assess the quality of performance over time, and define contingency and succession plans for the replacement of key personnel to help IHS continue achieving its objectives. As a result, IHS officials cannot ensure that facilities are providing quality health care.

Recognizing the challenges it faces with overseeing and providing quality health care in its facilities, IHS finalized the development of a quality framework in November 2016 that outlines, at a high level, IHS’s plan to develop, implement, and sustain a quality program intended to improve patient experience and ensure the delivery of reliably high quality health care. For example, the framework directs IHS to develop a quality office that will be responsible for identifying resource needs, structures, processes, and supports for an effective and sustainable quality assessment and performance improvement system. More specifically, the framework directs IHS to develop a process for monitoring select performance measures, such as measures of clinical care, patient access, and financial performance, for periodic review by leadership. The framework also explains that IHS will enhance its current patient safety reporting systems to encourage consistent use by staff. If effectively implemented, the quality framework could address the limited and inconsistent oversight of the quality of care provided in federally operated IHS facilities. As of November 2016, IHS officials stated that the agency has not yet selected quality performance measures but has plans to do so.
