CBP Collaborates with Stakeholders to Facilitate the Arrivals Process, but Could Strengthen Reporting of Airport Wait Times

What GAO Found

U.S. Customs and Border Protection (CBP), within the Department of Homeland Security, and airport and airline stakeholders jointly implement travel and tourism initiatives at U.S. international airports to facilitate the arrival of travelers. These initiatives include Automated Passport Control self-service kiosks that allow eligible travelers to complete a portion of the CBP inspection process before seeing a CBP officer, and Mobile Passport Control that allows eligible travelers to submit their passport and other information to CBP via an application on a mobile device. Various airport-specific factors can affect whether and how CBP and stakeholders implement travel and tourism facilitation initiatives at each airport. These factors include the size and layout of the airport facility, the infrastructure needed to support initiatives, the willingness and ability of the airport stakeholders to pay for initiatives or infrastructure to support them, as applicable, and stakeholder discretion in how to implement initiatives. CBP has two airport travel facilitation goals: (1) improving customer service levels for international arrivals and (2) maintaining or reducing wait times—and has implemented mechanisms to assess and obtain feedback on the traveler experience.

CBP allocates and manages staff using various tools, and stakeholders provide resources to help facilitate the traveler entry process. For example, CBP uses its Workload Staffing Model to determine the staffing requirements and help make allocation decisions for CBP officers at ports of entry, including airports. CBP also uses its Enterprise Management Information System to monitor and make immediate staffing changes to meet any traveler volume and wait time concerns at airports. Airport and airline stakeholders can also enter into agreements to pay for CBP officers to work overtime during peak travel hours or outside regular operational hours.

CBP monitors airport wait times and reports data on its public website to help travelers plan flights, including scheduling connecting flights, but the reported data have limited usefulness to travelers. Currently, CBP does not report wait times by traveler type, such as U.S. citizen or foreign visitor. Rather, CBP reports average hourly wait times for all travelers on arriving international flights. By reporting wait times for all categories of travelers combined, CBP is reporting wait times that are lower than those generally experienced by visitors. According to GAO’s analysis of CBP wait time data for the 17 busiest airports from May 2013 through August 2016, the average wait time was 13 minutes for U.S. citizens and 28 minutes for visitors, while the combined reported average wait time was 21 minutes. Reporting wait times by traveler type could improve the usefulness of CBP’s wait time data to travelers by providing them with more complete and accurate data on their wait times. This could help inform their flight plans and could provide additional transparency to allow CBP to work with stakeholders to determine what, if any, changes are needed, to improve the traveler experience and better manage wait times.

What GAO Recommends

GAO recommends that CBP report airport wait time data for different categories of travelers. CBP concurred with the recommendation and identified planned actions to address the recommendation.
