The Nation’s Fiscal Health
Action Is Needed to Address the Federal Government’s Fiscal Future

In addition to near-term financing decisions, a broader plan is needed to put the federal government on a more sustainable long-term path. This report illuminates this need by describing the fiscal condition of the U.S. government as of the end of fiscal year 2017 and its future fiscal path absent policy changes. It draws on the Fiscal Year 2017 Financial Report of the United States Government (2017 Financial Report) and GAO’s audit of the government’s consolidated financial statements.

According to the 2017 Financial Report, the federal deficit in fiscal year 2017 increased to $666 billion—up from $587 billion in fiscal year 2016 and $439 billion in fiscal year 2015. Federal receipts increased by $48 billion, but that was outweighed by a $127 billion increase in spending, driven by Social Security, Medicare, and Medicaid, and interest on debt held by the public (net interest). Debt held by the public increased from $14.2 trillion at the end of fiscal year 2016 to $14.7 trillion at the end of fiscal year 2017. Due to an increase in gross domestic product (GDP), it fell slightly as a share of GDP, from 77 percent at the end of fiscal year 2016 to 76 percent at the end of fiscal year 2017. This compares to an average of 45 percent of GDP over the period since 1946.

The 2017 Financial Report, the Congressional Budget Office (CBO), and GAO projections all show that, absent policy changes, the federal government’s fiscal path is unsustainable and that the debt-to-GDP ratio would surpass its historical high of 106 percent within 14 to 22 years (see figure below).

Sources: GAO, Congressional Budget Office, and 2017 Financial Report. | GAO-18-299SP

Note: Only GAO’s simulations include the effects of legislation enacted after September 30, 2017. At the time of this report, CBO has not yet released its 2018 long-term budget outlook report, which includes its 30-year extended baseline projection.
Importance of Early Action: The 2017 Financial Report, CBO, and GAO all make the point that the longer action is delayed, the greater and more drastic the changes will have to be. As shown in the timeline below, Medicare's Hospital Insurance Trust Fund, Social Security's Disability Insurance Trust Fund and Old-Age and Survivors Insurance Trust Fund are projected to face financial challenges. It is important to develop and begin to implement a long-term fiscal plan for returning to a sustainable path.

Fiscal Risks Place Additional Pressure on the Federal Budget
Fiscal risks are responsibilities, programs, and activities that may legally commit or create expectations for future spending based on current policy, past practices, or other factors.

Executive Agencies Have Opportunities to Contribute Toward Fiscal Health
Executive actions alone cannot put the U.S. government on a sustainable fiscal path, but it is important for agencies to act as stewards of federal resources. In prior work, GAO has identified numerous actions for executive agencies to contribute toward a more sustainable fiscal future.

| Actions needed to address improper payments | Reducing payments that should not have been made or that were made in an incorrect amount could yield significant savings. Reported improper payment estimates totaled about $141 billion for fiscal year 2017. Since fiscal year 2003, cumulative estimates have totaled about $1.4 trillion. |
| Multiple strategies needed to address the persistent tax gap | Reducing the gap between taxes owed and those paid could increase tax collections by billions. The annual net tax gap is estimated to be $406 billion (for tax years 2008-2010). |
| Continue to address duplication, overlap, and fragmentation | GAO has identified numerous areas to reduce, eliminate, or better manage fragmentation, overlap, or duplication; achieve cost savings; or enhance revenue. Actions taken so far by Congress and the executive branch have resulted in roughly $125 billion in financial benefits from fiscal years 2010 through 2017, with at least an additional $53 billion in estimated benefits projected to be accrued in 2018 or later. |
| Action needed to improve information on programs and fiscal operations | Decision making could be improved by ensuring the government’s financial statements are fully auditable, increasing attention to tax expenditures, and effectively implementing the Digital Accountability and Transparency Act of 2014 (DATA Act). |
