U.S. POSTAL SERVICE

Projected Capital Spending and Processes for Addressing Uncertainties and Risks

What GAO Found

The United States Postal Service (USPS) projects increased capital spending over the next 10 years. According to USPS, this spending will support its mission and improve its financial position. USPS projects average annual capital cash outlays of $2.4 billion from fiscal years 2018–2028—about 70 percent more than the $1.4 billion average from fiscal years 2007–2017 (see figure). For example, USPS plans to acquire a new fleet of delivery vehicles starting in 2019 to replace its aging existing fleet and plans to purchase new mail-processing equipment to increase efficiency. However, USPS faces a serious financial situation with insufficient revenues to cover expenses. This uncertainty may result in USPS’s making capital-spending prioritization decisions that can lead to tradeoffs across planned capital projects and potentially between capital spending and other organizational needs such as operational expenses. Such prioritization could lead to USPS’s undertaking less capital spending than currently projected in the absence of increased revenues or decreased expenses.

USPS has processes that help it identify the uncertainties and risks that may affect its capital spending and adjusts its capital spending accordingly, in line with internal control standards adopted by USPS. For example, USPS identifies organizational uncertainties, such as mail volumes and revenues, as part of its strategic planning process and considers them when creating its capital spending budget. It also identifies individual project risks through a project review process, and considers tradeoffs inherent in different project scenarios. USPS’s processes also allow it to respond to these uncertainties and risks. Specifically, USPS sets a capital-spending budget in its overall financial plan, to help ensure that spending is in line with expected resources. USPS’s process also allows it to shift funds if needed, such as to repair a facility damaged during a natural disaster. USPS also reviews individual capital projects during implementation and can change specifications or time frames based on changing circumstances.
