FEDERAL ACQUISITIONS

Congress and the Executive Branch Have Taken Steps to Address Key Issues, but Challenges Endure

Why GAO Did This Study

In fiscal year 2017, federal agencies obligated more than $500 billion to acquire products and services. These products and services included military aircraft, information technology software, and maintenance services. Amid this large spending, the federal government has taken steps to reform federal acquisitions, increase efficiencies, and improve results. For example, in the Services Acquisition Reform Act of 2003, Congress established the Acquisition Advisory Panel to review federal acquisition laws, regulations, and policies; and identify opportunities for improvement. The Panel issued its final report in 2007, addressing topics that span all three phases of the contracting life cycle identified by GAO: pre-contract award, contract award, and post-contract award.

GAO was asked to follow up on the Panel’s report and identify progress made since 2007. This report identifies the actions the federal government has taken to address key issues raised in the Panel’s report, and the challenges that remain. GAO reviewed documentation and interviewed personnel from federal agencies and the private sector. These personnel included staff from OMB that are responsible for federal procurement policy, as well as staff supporting a panel addressing DOD’s acquisition regulations and processes, known as the Section 809 Panel. GAO also leveraged its large body of work on federal acquisitions.

What GAO Found

Congress and the executive branch have taken numerous actions to address key issues the Acquisition Advisory Panel (Panel) identified in its 2007 report, but these actions have not eliminated some enduring challenges. The figure below presents the key issues the Panel addressed in relation to the life cycle of a typical contract as identified by GAO.

Figure: Key Issues the Acquisition Advisory Panel Raised, by Contracting Life Cycle Phase

Three of the key issues, and the corresponding challenges, align with specific phases in the contracting life cycle:

- **Requirements Definition:** The Panel found that fully identifying requirements before a contract is awarded is key to achieving the benefits of competition. GAO has found that unrealistic requirements have contributed to poor program outcomes at the Department of Defense (DOD), and that the Army’s requirements development workforce decreased by 22 percent from 2008 to 2017.

- **Competition and Pricing:** The Panel said that competition can help reduce prices. GAO’s work shows that competition rates have remained steady government-wide, and declined at DOD. See figure below.
GAO has also found that agencies are sometimes using bridge contracts—which GAO has generally defined as either extensions to existing contracts or new short-term, sole-source contracts—to avoid a lapse in service caused by delay of a follow-on contract award. In some instances, bridge contract awards delay opportunities for competition and can place the government at risk of paying higher prices for multiple years. The figure below depicts how an Army bridge contract for computer support services planned for 12 months was extended to 42 months.

Further, GAO’s work shows that agencies have not fully embraced initiatives and techniques intended to reduce the prices they pay, including consolidated purchasing approaches and robust market research.

- **Contractor Oversight:** The Panel raised questions about the capacity of federal agencies to oversee contractors. GAO has found that agencies continue to award contracts warranting increased management attention at a steady rate, such as contracts for management support services. With contracts like those for management support services, there is an increased risk that contractors may perform tasks reserved for the government. Additionally, GAO found that heavy workloads at the Department of Veterans Affairs have made it difficult for officials who oversee contractors to ensure contractors adhere to contract terms.

Three of the key issues, and the corresponding challenges, cut across all the phases of the contracting life cycle:

- **Acquisition Workforce:** The Panel found that the federal acquisition workforce faces workload and training challenges. GAO’s work has shown that DOD has enhanced its workforce, but some workforce gaps endure at DOD and across agencies.

- **Federal Procurement Data:** The Panel found that the government’s primary repository for acquisition data contained some unreliable data. Also, GAO has found that the system has demonstrated limitations. For example, guidance from the Office of Management Budget (OMB) required that agencies collect specific contract award data, but the system did not have the capability to do so.

- **Small Business Participation:** The Panel found a number of challenges hindering agencies’ efforts to meet small business goals. GAO has found small business participation has increased, but many agencies are not in full compliance with requirements governing Offices of Small and Disadvantaged Business Utilization (OSDBUs). For example, the directors of these offices should report directly to agency heads or their deputies, but not all agencies have established this type of direct reporting relationship.
