CRITICAL INFRASTRUCTURE PROTECTION

Key Pipeline Security Documents Need to Reflect Current Operating Environment

What GAO Found

The memorandum of understanding (MOU) Annex signed by the Transportation Security Administration (TSA) and Pipeline and Hazardous Materials Safety Administration (PHMSA) in 2006 delineates their mutually agreed-upon roles and responsibilities for pipeline security, but has not been reviewed to consider pipeline security developments since its inception. As a result, the annex may not fully reflect the agencies’ pipeline security and safety-related activities. Efforts to update the annex were delayed by other priorities. As of June 2019, there are no timeframes for completion. By developing and implementing timeframes for reviewing the MOU Annex and updating it, as appropriate, TSA and PHMSA could better ensure any future changes to their respective roles and responsibilities are clearly delineated and updated on a regular basis.

TSA’s Pipeline Security and Incident Recovery Protocol Plan, issued in March 2010, defines the roles and responsibilities of federal agencies and the private sector, among others, related to pipeline security incidents. For example, in response to a pipeline incident, TSA coordinates information sharing between federal and pipeline stakeholders and PHMSA coordinates federal activities with an affected pipeline operator to restore service. However, TSA has not revised the plan to reflect changes in at least three key areas: pipeline security threats, such as those related to cybersecurity, incident management policies, and DHS’s terrorism alert system. By periodically reviewing and, as appropriate, updating its plan, TSA could better ensure it addresses changes in pipeline security threats and federal law and policy related to cybersecurity, incident management and DHS’s terrorism alert system, among other things. TSA could also provide greater assurance that pipeline stakeholders understand federal roles and responsibilities related to pipeline incidents, including cyber incidents, and that response efforts to such incidents are well-coordinated.

What GAO Recommends

GAO is making five recommendations, including that: (1) TSA and PHMSA develop and implement a timeline for reviewing and, as appropriate, updating the 2006 MOU Annex; and (2) TSA periodically review, and as appropriate, update its 2010 pipeline incident recovery plan. DHS and DOT concurred with these recommendations.
