DISASTER RESPONSE

FEMA and the American Red Cross Need to Ensure Key Mass Care Organizations are Included in Coordination and Planning

What GAO Found

Following the three major U.S. hurricanes in 2017, disaster relief efforts of the Federal Emergency Management Agency (FEMA) and the American Red Cross (Red Cross) benefitted from locating key partners in the same place. In-person coordination was critical to maintaining communication in Puerto Rico and the U.S. Virgin Islands given the prolonged power outages and damage to public structures (see photo). However, some needs related to mass care—such as shelter, food, and supply distribution—were unmet. For example, local officials in Texas said flooded roads prevented trucks from delivering supplies. Providers encountered challenges in part because state and local agreements with voluntary organizations did not always clearly detail what mass care services could be provided. Additionally, FEMA guidance and training materials do not explicitly encourage states and localities to include in their written agreements the specific assistance each agency or organization can provide. This limits the benefits of mass care coordination and may put disaster victims at risk.

State, territorial, and local grantees of federal disaster preparedness grants are required to regularly submit information on their capabilities to FEMA, and FEMA has provided related guidance and technical assistance. However, the information some grantees provided to FEMA was not specific enough to aid its response in 2017. Moreover, FEMA does not require grantees to specify the organizations providing mass care services in their capabilities assessments. Also, FEMA does not have systematic protocols for providing feedback to grantees to improve their assessments. These limitations hinder FEMA’s efforts to strengthen emergency preparedness.
