U.S. POSTAL SERVICE

Expanding Nonpostal Products and Services at Retail Facilities Could Result in Benefits but May Have Limited Viability

What GAO Found

In 2018, U.S. Postal Service’s (USPS) retail facilities, such as post offices, generated about $10.5 billion in revenue and cost approximately $5 billion to operate, making them profitable overall. While such facilities accounted for about 15 percent of USPS’s total fiscal year 2018 revenues, and about 7 percent of its total costs, stakeholders identified other benefits that retail facilities provide for communities—particularly in rural areas—such as local access to government information and services.

Example of a U.S. Postal Service Retail Facility Lobby

Since 2008, USPS has offered a variety of nonpostal products and services at its retail facilities that have generated some revenue and other benefits. USPS data show that the nonpostal products and services for which USPS captures revenue data, such as money orders, generated about $431 million in total revenue in fiscal year 2018 and were profitable overall. Stakeholders said many of these nonpostal products and services also provided other benefits, such as enhanced convenience for customers, and postmasters GAO surveyed said some offerings, such as passport services, were highly valued in their communities.

Offering additional nonpostal products and services at USPS retail facilities could provide consumer, government, or community benefits, but viability may be limited. Stakeholders said new offerings, such as expanded financial products or government services could, for example, enhance consumers’ access and government efficiencies. In particular, some noted that USPS could provide a viable banking alternative for those lacking banking services. However, USPS officials, postmasters GAO surveyed, and stakeholders GAO interviewed said that additional offerings may generate minimal revenue and that USPS may face factors limiting the viability of these offerings. For example, groups representing states’ licensing agencies said offering state hunting and fishing licenses could be problematic given different state requirements. Also, stakeholders said USPS may not have the expertise nor the required capital to enter the market of some of these new offerings. Given such concerns, USPS and policy makers need to carefully weigh costs, benefits, and limitations of any new offerings.
