NUCLEAR WASTE

Congressional Action Needed to Clarify a Disposal Option at West Valley Site in New York

What GAO Found

The Department of Energy (DOE) has made progress in cleaning up radioactive waste at the site of the West Valley Demonstration Project in New York State. In the 1960s and 1970s, a commercial facility at the site reprocessed spent (used) nuclear fuel into reusable nuclear material—creating various wastes that remained on-site after the facility closed in 1976. Since 2011, DOE has demolished 51 of 55 structures there and disposed of about 1.3 million cubic feet of low-level waste to off-site locations. It has also placed solidified high-level waste into interim on-site storage (see fig.). In addition, DOE has processed for interim on-site storage about 30,000 cubic feet of transuranic waste (which is contaminated with elements that have an atomic number greater than uranium). As of February 2020, DOE reported spending about $3.1 billion on contracted cleanup activities, but it cannot estimate the cleanup’s final cost until it decides how it will address the remaining waste.

DOE has been unable to dispose of the high-level and transuranic wastes stored at West Valley because there are no facilities authorized to accept these wastes. DOE has identified two potential options for disposal of the transuranic waste: the federal Waste Isolation Pilot Plant in New Mexico and a commercial facility in Texas. However, the New Mexico facility is authorized to accept only waste from atomic energy defense activities, and DOE does not consider West Valley waste to be from atomic energy defense activities. Regarding the Texas facility, state regulations preclude disposal of the waste there. In 2017, DOE submitted to Congress a report on all disposal options, as required by the Energy Policy Act of 2005. Pursuant to this act, DOE must await action by Congress before making a final decision, and Congress has not yet acted.

What GAO Recommends

Congress should consider taking action to provide a legal option for the disposal of West Valley's transuranic waste.
