EMERGENCY RESPONDER SAFETY

States and DOT Are Implementing Actions to Reduce Roadside Crashes

What GAO Found

Move Over laws vary by state but generally require motorists to move over a lane or slow down, or both, when approaching emergency response vehicles with flashing lights stopped on the roadside. U.S. Department of Transportation’s (DOT) National Highway Traffic Safety Administration (NHTSA) data provide limited information on whether crashes involved violations of these state laws, but the agency is taking steps to collect additional data. For instance, NHTSA’s 2018 data show 112 fatalities from crashes involving emergency vehicles, representing 0.3 percent of all traffic fatalities that year, but these data cannot be used to definitively identify which crashes involved a violation of Move Over laws. NHTSA is proposing updates to the data that it encourages states to include on crash report forms to better identify crashes involving violations of Move Over laws, and plans to convene an expert panel and initiate a pilot project to study further data improvements.

Selected state officials reported that they have taken actions to improve public education and enforcement of Move Over laws but still face challenges in both areas. Such actions include education through various forms of media and regional coordination among states to conduct targeted enforcement of Move Over laws within their respective borders during the same time period. State officials cited raising public awareness as the most prevalent challenge, as motorists may not know the law exists or its specific requirements. Variation in the requirements of some Move Over laws—such as for which emergency vehicles motorists are required to move over—may contribute to challenges in educating the public about these laws, according to state officials.

DOT has taken actions and is planning others to help improve emergency responder roadside safety. NHTSA helps states promote public awareness of Move Over laws by developing and disseminating marketing materials states can use to develop their own traffic safety campaigns. NHTSA also administers funding that states can use for public awareness activities or enforcement initiatives related to emergency responder safety. FHWA has coordinated with a network of stakeholders across the country to train emergency responders on traffic incident management best practices. Finally, in response to congressional direction, NHTSA officials are planning several research efforts intended to enhance emergency responder safety, including studies on motorist behaviors that contribute to roadside incidents and technologies that protect law enforcement officials, first responders, roadside crews and other responders.

General Requirements of Move Over Laws for Motorists on a Multiple Lane Roadway
