K-12 EDUCATION

Student Population Has Significantly Diversified, But Many Schools Remain Divided Along Racial, Ethnic, and Economic Lines

What GAO Found

As the K-12 public school student population grows significantly more diverse, schools remain divided along racial, ethnic, and economic lines throughout the U.S. These divisions span school types, regions, and community types (urban, suburban, and rural). More than a third of students (about 18.5 million) attended a predominantly same-race/ethnicity school—where 75 percent or more of the student population is of a single race/ethnicity—according to GAO’s analysis of Department of Education data for school year 2020-21. GAO also found that 14 percent of students attended schools where 90 percent or more of the students were of a single race/ethnicity.

Percent of Public K-12 Students Attending School Where 75 Percent or More of the Students Are of Their Own Race/Ethnicity

Because diversity within a school is generally linked to the racial/ethnic composition of the district, school district boundaries can contribute to continued divisions along racial/ethnic lines. For example, about 13,500 predominately same-race/ethnicity schools (about 14 percent of all public K-12 schools) are located within 10 miles of a predominately same-race/ethnicity school of a different race/ethnicity; of these schools, 90 percent have a different same-race/ethnicity pair in a different school district.

GAO’s analysis of 10 years of Education data shows that district secession—a process by which schools sever governance ties from an existing district to form a new district—generally resulted in shifts in racial/ethnic composition and wealth. Compared to remaining districts, new districts had, on average, roughly triple the share of White students, double the share of Asian students, two-thirds the share of Hispanic students, and one-fifth the share of Black students (see figure below). New districts were also generally wealthier than remaining districts. Specifically, the percentage of students eligible for free or reduced price lunch—a proxy for poverty—was half that of the remaining districts.

Racial/Ethnic Composition of New and Remaining Districts One Year after District Secession

GAO incorporated technical comments from Education, as appropriate.
