THE BIG PICTURE

Russia's invasion of Ukraine in February 2022 sparked the largest European war since World War II. The response of the United States and its partners in providing military and humanitarian assistance to Ukraine and its neighboring countries has been swift and continuing. The Ukraine Supplemental Appropriations Act, 2022 (Division N of Public Law 117-103) and the Additional Ukraine Supplemental Appropriations Act, 2022 (Public Law 117-128) were enacted in March and May of 2022, respectively. They provided billions of dollars in emergency supplemental appropriations in response to the war in Ukraine. Russia has invested heavily in efforts to check U.S. strengths and impede the United States' ability to defend its interests and allies around the world, according to the March 2021 Interim National Security Strategic Guidance.

KEY GAO FINDINGS

GAO has a large body of work assessing areas relevant to the war in Ukraine. This includes the U.S. military posture in Europe, development assistance, the information environment, military readiness, and intelligence issues. Among other things, we found that:

- The Department of Defense (DOD) could better plan and prioritize European posture and deterrence through the European Deterrence Initiative, including estimating long-term costs to sustain prepositioned equipment and other infrastructure projects. GAO-18-128

- The State Department has not effectively shared information on democracy assistance projects in Ukraine as well as in other countries. GAO-20-173

- DOD could improve leadership and integration of information operations across the department. GAO-21-525T

- DOD does not have effective metrics to measure readiness in each of the five warfighting domains. GAO-21-279

- DOD’s open source intelligence mission area could benefit from metrics, standardized terminology, and clarification of roles and responsibilities. GAO-21-295
NATIONAL SECURITY CONSIDERATIONS AND KEY GAO RECOMMENDATIONS

The war in Ukraine underscores the importance of five national security considerations and key relevant GAO recommendations, as listed below.

Figure 2: Selected National Security Considerations and Relevant GAO Recommendations, September 2022

SECURITY ASSISTANCE, EUROPEAN POSTURE, AND DETERRENCE
Department of Defense (DOD) efforts over several years sought to deter Russian aggression in Europe through the presence and engagement of U.S. forces with NATO and partner nations. To achieve its goals, DOD should:
- develop cost estimates for sustaining posture initiatives under the European Deterrence Initiative in the long term; and
- develop guidance for preparing impact assessments associated with the effect of providing defense articles and services.

HUMANITARIAN AND DEVELOPMENT ASSISTANCE
The humanitarian crisis in Ukraine has highlighted the need for effective humanitarian and development assistance, including support for refugees and democracy-building assistance. The Department of State and the U.S. Agency for International Development (USAID) have made progress in these areas, but improvements can be made by:
- State Department actively sharing information on its democracy assistance projects internally; and
- State Department and USAID monitoring refugee programs in countries where security conditions limit in-person visits.

INFORMATION ENVIRONMENT
Cyber attacks and disinformation campaigns by the Russian government underscore the need for DOD to continue strengthening its plans and training in the information environment. DOD can address operations against near-peer competitors and further strengthen its efforts by:
- identifying steps needed to provide for defense-wide strategy, planning, and budgeting for electromagnetic spectrum operations.

TRAINING AND READINESS
The war in Ukraine prompted deployments of U.S. military forces to Europe to bolster allied defenses in the region. Success of these deployments depends on the training and readiness of forces in each of the five warfighting domains—ground, sea, air, space, and cyber. Success also depends on:
- DOD establishing metrics for assessing readiness to conduct missions in contested environments in all five domains; and
- the Army dedicating resources that enable its logistics system to operate when disconnected from the Army’s network.

INTELLIGENCE
The war in Ukraine has emphasized the need for DOD and the intelligence community to take action to improve advance-warning capabilities. Efforts can be strengthened by:
- the Defense Intelligence Agency developing a plan to involve stakeholders in the development of a foundational military intelligence system; and
- DOD developing and using tools that enhance accountability for specific mission areas, including open source intelligence.

ABOUT GAO
The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people.
