FEDERAL REAL PROPERTY

Preliminary Results Show Federal Buildings Remain Underutilized Due to Longstanding Challenges and Increased Telework

Statement of David Marroni, Acting Director, Physical Infrastructure Team
FEDERAL REAL PROPERTY

Preliminary Results Show Federal Buildings Remain Underutilized Due to Longstanding Challenges and Increased Telework

What GAO Found

Federal agencies have long struggled to determine how much office space they needed to fulfill their missions efficiently. Retaining excess and underutilized space is one of the main reasons that federal real property management has remained on GAO’s High-Risk List since 2003. Seventeen of the 24 federal agencies in GAO’s review used an estimated average 25 percent or less of their headquarters buildings’ capacity in a three-week sample period across January, February, and March of 2023. On the higher range, agencies used an estimated 39 to 49 percent of the capacity of their headquarters on average.

Underutilized office space has financial and environmental costs. Federal agencies spend about $2 billion a year to operate and maintain federal office buildings regardless of the buildings' utilization. In addition, agencies spend about $5 billion annually to lease office buildings. Any reduction in office space could reduce these costs. Office buildings also have environmental costs that could be lowered with better utilization. For example, GSA renovated and reduced its current agency real estate footprint, which helped reduce energy consumption and costs.

Agency real property officials identified challenges to increasing the utilization of their headquarters buildings.

- **Funding.** Additional budget resources are needed to reconfigure existing space to increase utilization and support a hybrid work environment.
- **Potential policy changes.** Concerns about the future of in-office attendance policies and habits have caused a reluctance to reduce headquarters space.
- **Standards.** There are no standards for how federal agencies should measure utilization to guide agency efforts.
- **Culture.** Agency leaders can be reluctant to share headquarters space among inner-agency components or other agencies.

Chairman Perry, Ranking Member Titus, and Members of the Subcommittee:

I am pleased to be here today to discuss our ongoing work on federal agencies’ office space utilization in headquarters buildings. The federal government owns 511 million square feet of office space, costing billions annually to operate and maintain. During the pandemic, federal agencies operated under a maximum telework posture, with many employees working away from the office. As the country emerges from the pandemic and agencies continue to offer telework as an option, the federal government has a unique opportunity to reconsider how much and what type of office space it needs.

Even before the pandemic, federal agencies struggled to determine how much office space they needed to fulfill their missions efficiently. Retaining excess and underutilized space is one of the main reasons that federal real property management has remained on GAO’s High-Risk List since 2003. In 2015, OMB issued its National Strategy for the Efficient Use of Real Property, which included the Reduce the Footprint policy. This policy required a number of agencies to set annual targets for reducing domestic office and warehouse space. The Federal Property Management Reform Act of 2016 established the Federal Real Property Council (FRPC)—a collection of 24 federal agencies that occupy 98

---

1GAO. High-Risk Series: Efforts Made to Achieve Progress Need to Be Maintained and Expanded to Fully Address All Areas. (Washington D.C.: Apr. 20, 2023). Excess property is any property the agency determines it no longer needs to carry out its responsibilities. Underutilized property is property that an agency uses irregularly or infrequently, or property where agency purposes can be accomplished with only a portion of the property.

percent of all federal real property. The FRPC is chaired by the Office of Management and Budget (OMB), and aims to reduce the costs of managing property. Although these efforts have improved the focus on real property management, federal agencies continue to have unneeded space.

My testimony today provides preliminary observations on our review of office space utilization in the headquarters buildings of the 24 FRPC member agencies. My statement:

1. assesses the extent to which FRPC-member agencies utilized their headquarters buildings in selected weeks of early 2023;
2. describes the different types of costs of underutilized federal office space; and
3. discusses challenges that agency officials identified to increasing the utilization of their headquarters buildings.

We collected information from all 24 FRPC member agencies related to the utilization of their headquarters buildings (see Appendix I for a listing of the buildings). Utilization is a ratio of a building’s capacity and the extent to which an agency uses that capacity. Utilization differs from attendance because a building’s capacity is based on the size of the building, not the number of people assigned to it. All assigned staff could go to a building, and it could still be underutilized if the building has more space than it needs.

To determine the capacity of each building, we collected data from each agency on the number of useable square feet in each building—the
portion of a building that is available for occupants, which includes offices, team rooms, and conference rooms. We verified that information by comparing it with data from GSA, which has ultimate control and custody for some of the buildings. We then calculated the capacity of each building by dividing the number of usable square feet by the GSA benchmark of 180 usable square feet per staff person.

To determine the extent to which agencies are using the buildings, we collected daily attendance data at the headquarters buildings of all 24 FRPC-member agencies for three nonconsecutive weeks in January, February, and March 2023. Agency officials said these represented normal weeks at that time, without any obvious reason why there would be a significantly higher or lower number of staff in the headquarters building than any other week. We chose to measure attendance in one-week intervals because all 24 agencies said that their in-office presence had stabilized week-to-week. We focused on federal agency office space in headquarters buildings because of the availability of attendance data and because they represent office buildings with relatively consistent types of uses. We calculated the utilization of a building by comparing its

---

5Dividing the number of usable square feet by the alternative GSA benchmark of 150 usable square feet per staff person will yield a greater estimated capacity of each building, and thus yield a lower weekly utilization average. We used the 180 usable square feet benchmark suggested by GSA and OMB. We used a single benchmark consistently across agencies for our analysis. However, agencies may use a different benchmark in occupancy agreements.

6We did not collect data on the number of staff assigned to each headquarters building or calculate the percentage of those assigned staff who came into the office during our sample period because the focus of our review was on building utilization, not attendance.

7We requested data from January 23-27, 2023; however, the Department of Homeland Security provided us data from January 30 to February 3 because of a network issue affecting computer login data. Also, Department of Housing and Urban Development officials noted they had ongoing renovation projects, which increased telework during the time we requested data.

8We previously found that few agencies track in-office attendance at non-headquarters facilities. GAO, Federal Real Property: GSA Could Further Support Agencies’ Post-Pandemic Planning for Office Space Use, GAO-22-105105, (Washington, D.C.: Sept. 7, 2022); DOD provided us data on attendance at the Mark Center in Alexandria, Virginia, not the Pentagon because it has administrative functions similar to those at civilian agency headquarters buildings.
capacity in usable square feet to the actual in-office attendance for the sample period.

The 24 agencies varied in the type and quality of the attendance data they collected and were able to provide to us. Agencies provided us aggregate summaries or raw data files of badging or computer network login data. We asked data reliability questions to each agency to ensure the data could be used for reporting purposes. The percentages we provide in this testimony are preliminary estimates of building utilization based on ongoing work and are subject to change. Based on our discussions with agency officials, responses to our data reliability questions, and where possible, a review of the data for omissions and errors, we determined that the data were sufficiently reliable for the purposes of examining occupancy data and the buildings’ space utilization.

We conducted site visits to six agency headquarters buildings to observe current building utilization, conditions, and agency efforts to adapt their office space. We selected these headquarters buildings to obtain a variety in size and age of the buildings. We interviewed federal and private sector officials to understand the costs of underutilized space and the challenges to increasing the utilization of agency headquarters buildings. We also gathered information at FRPC meetings in January and April 2023.

The ongoing work on which this statement is based is being conducted in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

The federal government owns about 511 million square feet of office space, according to the Federal Real Property Profile—the government wide real property database maintained by the General Services Administration (GSA). GSA manages approximately 1,500 federally-owned buildings, which are used by various federal agencies (see figure 1). GSA also leases space for tenant agencies from private-sector

---

9Agencies are not required to collect attendance data or in any specific format.
owners. As of April 2023, GSA managed 7,685 leases, totaling nearly 180 million square feet of space.

Figure 1: The Headquarters Buildings for the Departments of Energy, Labor, Treasury (first row), Commerce, Housing and Urban Development, and Agriculture (second row)

GSA provides guidance and tools to assist agencies with office space planning. In particular, GSA established a benchmark of 150 to 180 useable square feet per employee. Use of the benchmark is not

Useable square footage represents the portion of a building that is available for occupants, which includes offices, team rooms, and conference rooms. Gross square footage is a more inclusive measure of all areas on all floors of a building, which includes additional spaces like bathrooms, lobbies, and mechanical rooms. See GAO, Federal Real Property: Measuring Actual Office Space Costs Would Provide More Accurate Information, GAO-20-130 (Washington, D.C.: Dec. 10, 2019).
required. These benchmarks and agency efforts generally assume that assigned employees would work at the office most days during the week.

Maximum Telework During the Pandemic

The use of federal real property was greatly impacted by the March 13, 2020, national emergency declaration related to COVID-19 and the release of subsequent guidance aimed at slowing the transmission of COVID-19. Federal agencies responded by adopting a maximum telework posture, allowing many employees to work remotely off-site for necessary agency operations. As a result, many federal employees shifted to remote work and telework, including employees who had not historically done so. In June 2021, OMB issued a memo directing agencies to create plans for bringing staff back to their agency offices to perform their work. All of the 24 FRPC member agencies said they completed their initial return to the office transitions at some point during 2022. The national emergency declaration related to the pandemic was terminated on April 10, 2023.

OMB Guidance on Space Planning and Telework

In July 2022, OMB asked the FRPC agencies to collect evidence-based data to estimate their space needs. The OMB memo stated that when determining future physical space requirements, agencies should consider the agency’s mission and customer needs, its current and future workforce, and how any decisions might impact local communities. In April 2023, the Administration released additional guidance directing agencies to describe their telework plans, monitor organizational health

---

12Off. of Mgm’t and Budget, OMB Memo No. 21-25, “Integrating Planning for A Safe Increased Return of Federal Employees and Contractors to Physical Workplaces with Post-Reentry Personnel Policies and Work Environment” (June 10, 2021).

Most of the Federal Agencies Used An Estimated 25 Percent or Less of Their Headquarters’ Capacity during Selected Weeks in 2023

Our review of three selected weeks during January, February, and March 2023 found that 17 of the 24 federal agencies used on average an estimated 25 percent or less of the capacity of their headquarters buildings. On the higher range, agencies used an estimated 39 to 49 percent of the capacity of their headquarters on average. Utilization is a ratio of a building’s capacity and the extent to which an agency uses that capacity. We calculated utilization based on the size of a building in terms of usable square feet compared to how many people entered the building per day. Figure 2 divides the 24 agencies into four distinct groups (quartiles) based on the agencies’ average utilization of their headquarters buildings.

---

14Off. of Mgm’t and Budget, OMB Memo No 23-15, “Measuring, Monitoring, and Improving Organizational Health and Organizational Performance in the Context of Evolving Agency Work Environments” (April 13, 2023). The memo indicated that there was an expectation that agencies would increase meaningful in-person work at federal offices, while still using flexible operational policies.

15Utilization differs from attendance because a building’s capacity is based on the size of the building, not the number of people assigned to it.
Figure 2: Quartile Weekly Utilization Estimated Averages of Federal Headquarters Buildings across Three-Week Sample (One Week in Each of January, February, and March 2023)

Building utilization percentage

We identified three primary causes for the low space utilization in federal headquarters buildings.

- **Excess space is a longstanding challenge.** Federal real property management has been on GAO’s High Risk List since 2003 in large part because the federal government retains more space than it
We also found in 2023 that recent efforts to reduce unneeded federal space have faced challenges. At a meeting of the FRPC in January 2023, more than half of the agency officials in attendance acknowledged that their headquarters buildings had excess space prior to the pandemic. For example, we calculated for one of the headquarters in the lowest use quartile that if all assigned staff entered the building on a single day, it would still only use 67 percent of the building’s capacity based on its usable square feet.

- **Building configurations do not support a modern workplace.** The headquarters buildings we visited were built decades ago. They were configured to support a workplace model that included numerous areas no longer needed in the modern workplace, such as some administrative and storage spaces. In some cases, agencies also configured their spaces with larger office spaces than are currently needed. Department of Treasury officials also said that the historic nature of its headquarters complicated its ability to reconfigure to support higher utilization. Officials from several agencies thought portions of their building could not be easily configured to office space. Consequently, officials voiced concerns about including these areas in an office space capacity analysis. For example, VA officials said the agency’s basement (89,000 usable square feet) housed its cafeteria, mail, and other operations with little availability for office space.

- **Agencies have embraced hybrid work.** All 24 agencies said that their in-office workforce has not returned to pre-pandemic levels due to increased use of telework and remote work. Some agencies said that workplace flexibilities, such as episodic telework and remote work, existed before the pandemic but are used much more frequently now. The amount of hybrid work varies by agency because mission needs vary, which can determine whether work can be done remotely. For instance, agency officials noted that classified work requires staff to work in the office.

---

16 GAO-23-106203.

## Underutilized Federal Office Space has Various Costs

### Financial Costs

Office buildings are expensive to operate, maintain, and lease, and any reductions in space would reduce these costs. The Federal Real Property Profile data for 2021 indicates that the 24 FRPC agencies spend about $2 billion a year to operate and maintain owned federal office buildings. In addition, agencies may postpone maintenance and repairs to assets in their portfolios for various reasons, which over time can create a backlog of costly deferred maintenance and repairs.\(^{18}\) Disposing of underutilized buildings in need of repair would reduce these costs.

In addition, allowing unneeded leases to expire would directly reduce costs. Federal agencies spend about $5 billion annually to lease office space from the private and government sector. As of April 2023, more than half of GSA’s leases (4,108 out of 7,685), which account for more than 83 million square feet of space, have expiration dates scheduled for calendar years 2023 to 2027.

### Environmental Costs

Office buildings also have environmental costs, and any reduction in office space could reduce those costs. Emissions—and their associated monetary costs—are still generated with underutilized space because agencies continue to operate buildings even when staff are not in the office. While it is difficult to estimate the environmental impact of any individual building, commercial buildings in the country overall consume 35 percent of the electricity consumed in the U.S. and generate 16 percent of all U.S. carbon dioxide emissions, according to the Department of Energy.\(^ {19}\) For example, GSA renovated and reduced its current real estate footprint. According to a GSA presentation, these efforts reduced its energy consumption by 50 percent, saving $6.5 million annually.

---

\(^{18}\)GAO and others have reported on issues with managing repairs and maintenance in federally owned facilities, which are costly to the federal government. Federal agency financial reports have reported $76 billion in deferred maintenance and repair costs in 2021, an increase of about 50 percent since 2017. See GAO. *Federal Real Property: Agencies Attribute Substantial Increases in Reported Deferred Maintenance to Multiple Factors GAO-23-106124* (Washington, D.C.: Oct. 28, 2022).

Underutilized federal office space involves opportunity costs—the loss of potential gain from alternative uses of the resources involved—to both the federal government and the local economy. The federal government could apply resources for an unneeded building to other priorities, such as reducing the deferred maintenance on remaining buildings. In the local economy, unneeded federal properties and land could be put to productive use. For example, the private sector successfully converted an unneeded post office in Washington, D.C., into a hotel. Selling a federal building to the private sector increases the local tax base, as federal buildings are generally exempt from local taxes.

During our interviews and site visits, agency officials described some challenges to increasing the utilization of their headquarters buildings. During the April 2023 Federal Real Property Council meeting, federal agency officials that were in attendance ranked those challenges. Most federal agency officials placed the budget resources needed to reconfigure space and concerns about future in-office attendance policies as the top challenges (see figure 3).

</tr>
</tbody>
</table>

Source: GAO analysis of agency comments. | GAO-23-106200

Agency officials ranked the need for additional budget resources to reconfigure their spaces to support a hybrid office as the top challenge to increasing utilization of their headquarters building. Specifically, they said they would need to transform traditional office configurations into hybrid offices, allowing for more efficient use and better support of office sharing. For example, USDA officials said that updating their two-building
headquarters to support higher density and office sharing would require millions of dollars of investments. In addition, some headquarters buildings are only partially updated. For example, Department of Housing and Urban Development officials said the agency made capital investments to update one wing to support modern, hybrid work (figure 4). However, the rest of the building has an outdated hallway-office configuration that does not support collaboration and shared spaces.

Figure 4: Office Space at the U.S. Housing and Urban Development Headquarters — Un-Renovated (left), and Updated (right)

The second top challenge, as ranked by agency officials, involved concerns about the future of in-office attendance policies. Although agency officials said their in-office attendance remained stable, many worried that policies or habits could change. If they consolidate to meet current demand, the agency may no longer be able to provide space for all headquarters personnel if policies change or more staff decide to return to the office. Agency officials said media reports about back-to-the-office mandates could make such consolidations seem premature. Recent congressional bills and an OMB memo have indicated that there may be additional policy changes. Our September 2022 report reflected similar concerns. In the report, agencies reported that they were uncertain
of the number of people who would regularly need access to permanent office space.  

**Challenges to Sharing Headquarters Space with Other Agencies or Internally**

While only two agency officials ranked a reluctance to share headquarters space with other agencies as the top challenge to increasing utilization, most listed it as a challenge. GSA officials said that maximizing utilization could require some agencies to either share their headquarters with other agencies or move their headquarters functions into another shared space. One official said their leadership is reluctant to share headquarters space with other agencies because it could lower their perceived standing as a cabinet-level agency.

Eight agency officials also ranked inner-agency silos as the first or second biggest challenge to increasing headquarters utilization. For example, the Department of Energy noted that groups of seats in its headquarters are assigned to departmental elements based on their funding, customers, and workspace needs. Some agency officials said that individual bureau leadership protected spaces assigned to them, including offices, conference rooms, and specialized spaces like secure rooms. They said no current mechanism exists to share those spaces more broadly throughout their agencies. During our site visits, we observed building spaces subdivided into smaller bureau-level divisions that can lead to inefficient utilization. For example, USDA showed us a segment of their headquarters used for agency-wide workspace sharing, while the workspaces in the rest of the two buildings were assigned to individual bureaus (see fig. 5).
Agency officials also indicated that the lack of consistent standards for how agencies should measure utilization or what is considered full utilization for federal office space made maximizing space challenging. For example, one agency official said the biggest challenge to improving utilization was uncertainty about measuring utilization in a high telework environment. Currently, each agency establishes its own measures and standards for office space utilization. We found that agencies use a mix of badge swipes, network logins, self-reporting, or guard tracking to measure attendance at their headquarters. These differences feed into additional differences in how agencies measure building capacity. Not all agencies agreed with our approach to measuring utilization because they use different metrics for office space planning. For example, some agencies attribute a certain square footage per staff person, while others count physical workspaces. Agency officials questioned if pursuing 100 percent utilization based on attendance made sense due to likely fluctuations in daily attendance. Agency officials also said that they have not yet developed new utilization metrics to respond to the rise of hybrid office arrangements.
work. One agency official said that a lack of standard methods and measurements can allow agencies to remain in a wait-and-see mode until there was consensus on how to proceed.

In conclusion, the pandemic has lowered the utilization of headquarters office space and may have added to the amount of unneeded space that existed prior to the pandemic. While all agencies have resumed in-person operations, it is clear that the federal workplace has evolved as agencies have embraced hybrid and remote office environments. This moment presents a unique opportunity to reconsider various aspects of the federal government’s real property portfolio and how best to align the portfolio with future needs.

We shared a draft of our written testimony with all 24 federal agencies and OMB. The General Services Administration and the Department of Veterans Affairs provided comments, which are reprinted in appendixes II and III. Several agencies provided technical comments, which we incorporated as appropriate.

Chairman Perry, Ranking Member Titus, and Members of the Subcommittee, this completes my prepared statement. I would be pleased to respond to any questions that you may have at this time.

Source: GAO summary and analysis of information from 24 federal agencies.  GAO-23-106200
Appendix II: Comments from the General Services Administration

July 5, 2023

The Honorable Gene L. Dodaro
Comptroller General of the United States
U.S. Government Accountability Office
Washington, DC 20548

Dear Comptroller General Dodaro:

The U.S. General Services Administration (GSA) appreciates the opportunity to review and comment on the U.S. Government Accountability Office’s (GAO) draft report, Federal Buildings Remain Underutilized Due to Longstanding Challenges and Increased Telework (GAO-23-106200). In particular, the report underscores that in order for GSA to better optimize the Federal real estate footprint, agencies need access to resources to modernize and reconfigure space. For GSA, that means having full and on-going access to the Federal Buildings Fund (FBF) to make critical improvements in federally owned buildings and consolidate out of leased space.

Ways of working in offices have changed following the pandemic and will continue to change—particularly as organizations continue to leverage new technology and appropriate hybrid working arrangements. As a result, calculating appropriate building utilization rates will be an ongoing challenge as standards and methodologies for measuring utilization (both at GSA and in industry) remain unsettled.

That said, GSA recognizes the unique opportunity that these emerging working arrangements and technologies present to right size office space requirements and reduce long-term real estate costs. The GSA team stands ready to help agencies optimize their real estate portfolios. However, to do this effectively and expeditiously, GSA needs full access to annual collections in the FBF and streamlined authorities to reconfigure space and dispose of unneeded real estate assets. Those tools will help GSA to catalyze opportunities for consolidation and co-location and accelerate optimization of the Federal real estate portfolio. As the draft report points out, funding is needed to reconfigure existing facilities to better support new ways of working and support consolidations out of leased space into the owned inventory. Since fiscal year 2011, the FBF has been underfunded by almost $13 billion, and the primary impact of that underfunding has been on the New Construction and Repairs and Alterations accounts, which are both integral to supporting consolidation activities. The lack of full access to the FBF has resulted in missed opportunities for consolidations and co-locations and continues to delay efforts to reduce the Federal Government’s real estate footprint and save money.

Thank you again for your work on this matter and for giving GSA the opportunity to provide feedback. If you have any questions or concerns, please contact me at (202)
929-7277 or Gianelle Rivera, Associate Administrator, Office of Congressional and Intergovernmental Affairs, at (202) 501-0563.

Sincerely,

Robin Carnahan
Administrator

cc: David Marroni, Acting Director, Physical Infrastructure Issues, GAO
July 3, 2023

Mr. David Marroni  
Acting Director  
Physical Infrastructure  
U.S. Government Accountability Office  
441 G Street, NW  
Washington, DC 20548

Dear Mr. Marroni:

The Department of Veterans Affairs (VA) has reviewed the Government Accountability Office (GAO) draft report: *Federal Real Property: Federal Buildings Remain Underutilized Due to Longstanding Challenges and Increased Telework* (GAO-23-106200).

The enclosure contains general comments to the draft report. VA appreciates the opportunity to comment on your draft report.

Sincerely,

Tanya J. Bradsher  
Chief of Staff

Enclosure
Appendix III: Comments from the Department of Veterans Affairs

Enclosure

Department of Veterans Affairs (VA)

Comments to Government Accountability Office (GAO) Draft Report,
FEDERAL REAL PROPERTY: Federal Buildings Remain Underutilized
Due to Longstanding Challenges and Increased Telework
(GAO-23-106200)

General Comments:

While the report cites low utilization rates, it does not identify what the ideal utilization should be, how it should be measured or whether there is a recommendation for a more consistent government-wide methodology for measuring.

It is longstanding Department of Veterans Affairs (VA) policy to use 200 usable square feet (USF) per person, rather than the 180 USF per person stated in this GAO report. The GAO’s methodology lowers VA’s utilization rate.

VA also recommends the below grade spaces and spaces under renovation at 810 Vermont Avenue headquarters be excluded from office utilization calculations. The below grade spaces house close to 89,000 USF of primarily storage and support spaces like the cafeteria, mail and IT operations (with very little office space). The spaces under renovation are unoccupied and not available as office space. When one excludes the below grades and space under renovation and uses the utilization rate of 200 USF per person, VA’s average daily occupancy increases to 22% from GAO’s estimate of 14%. Even using the GAO’s 180 USF per person, VA’s occupancy rate would be approximately 20%.

The report should recognize efforts made since the start of the COVID-19 pandemic to reduce office space in the National Capital Region (NCR). For VA, that includes a reduction of 242,000 USF/282,000 RSF (Rentable Square Feet) of leased office space in the NCR since quarter 4 of fiscal years 2020. The reduction represents a 16% reduction in the VA Central Office portfolio and an annual lease cost avoidance of $15.5 million. The GAO report contains no recognition of the substantial progress that the VA has achieved in addressing the problem being analyzed.

Department of Veterans Affairs
July 2023
If you or your staff members have any questions about this testimony, please contact David Marroni, Acting Director, Physical Infrastructure, at (202) 512-2834 or marronid@gao.gov. <th>GAO’s Mission</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO’s commitment to good government is reflected in its core values of accountability, integrity, and reliability.</td>
