United States General Accounting Office Washington, D.C. 20548

National Security and International Affairs Division B-218976

April 16, 1987

The Honorable William V. Roth, Jr. Ranking Minority Member Committee on Governmental Affairs United States Senate

The Honorable Gerry Sikorski Chairman, Subcommittee on Human Resources Committee on Post Office and Civil Service United States House of Representatives

This report responds to your request that we determine how often former Department of Defense (DOD) personnel work for defense contractors on the same projects they worked on while with DOD. This report expands on our July 1986 interim report, <u>DOD Revolving Door:</u> Relationships Between Work at <u>DOD</u> and Post-DOD Employment (GAO/NSIAD-86-180BR), which was a brief look at selected data obtained from our questionnaire survey.

We asked a sample of former DOD personnel who were working for defense contractors about (1) the extent to which their post-DOD work involved the same project or program they had worked on while at DOD, (2) their working relationships with, or responsibilities for, contractors while they were with DOD, (3) their business contacts with DOD personnel, (4) their initial salary with a defense contractor compared with their final DOD salary, and (5) their opinion about a proposed post-DOD employment restriction.

We guaranteed anonymity to respondents to encourage valid responses. However, since the respondents were self-reporting on a sensitive issue dealing with potential post-employment conflicts of interest, any bias in the data is likely to be the result of their reporting less post-DOD employment on the same project than actually existed.

None of the information we developed was designed to identify specific statutory or administrative improprieties. However, we believe that this information shows that some individuals leaving DOD and going to work for defense contractors may give the appearance of (1) not having acted in the best interests of the government because they viewed a defense contractor as a potential employer; (2) taking advantage of insider contacts to the detriment of the government; or (3) influencing contract decisions to obtain later employment. We estimate that about 26 percent

of approximately 5,100 former high- and mid-level DOD personnel had responsibilities while at DOD for defense contractors for whom they later worked. Further, we estimate that about 21 percent subsequently worked on the same system, project, or program for a defense contractor that they had worked on while with DOD. In addition, we estimate that about 7 percent were responsible for DOD contracts that later supported their post-DOD employment. We estimate that about 32 percent of the 5,100 have been in one or more of these three situations.

Appendixes I and II include generally the same information presented in our interim report—a description of our objective, scope, and methodology and a demographic description of the study universe. Appendix III provides details on our projections, and appendix IV contains a copy of the survey questionnaire.

We requested and received official DOD comments on a draft of this report. DOD agreed with our findings and their final comments are included in appendix V.

As agreed with your office, unless you publicly announce its contents earlier, we do not plan further distribution until 15 days from the date of this report. At that time, we will send copies to the Chairmen of the House and Senate Armed Services Committees, the House Committee on Government Operations, and other interested congressional committees; the Secretaries of Defense, the Army, the Navy, and the Air Force; the Directors of the Office of Management and Budget and the Office of Government Ethics; and other interested parties.

Frank C. Conahan

Objective, Scope, and Methodology

Our objective was to determine how often former DOD personnel were employed by defense contractors on the same project or program that they had worked on while with DOD. In addition, we obtained information on

- the extent that the DOD responsibilities of former DOD personnel could have affected defense contractors,
- the extent of work-related communication between former DOD personnel and DOD,
- the salary former DOD personnel received from defense contractors compared with their final DOD salary, and
- the opinions of former DOD personnel on potential employment prohibitions.

We limited our study to high- and mid-level personnel who left DOD during fiscal years 1983 and 1984. High-level personnel include civilians in the Senior Executive Service (SES) or executive-level appointees and military general grade officers (O-7 and above). Mid-level personnel include civilians from grade GS-13 through grade GS-15 and military personnel from major (O-4) through colonel (O-6). We also limited our study to former DOD personnel who were thought to be working for defense contractors because each held an industrial security clearance.

By examining Defense Manpower Data Center computer records on separations and retirements, we identified 30,126 high- and mid-level personnel who left dod during fiscal years 1983 and 1984. Of this group, 6,058 held industrial security clearances and could be classified in the following four subgroups:

- 226 high-level military and civilian personnel,
- 4,268 mid-level military personnel,
- · 723 mid-level civilian retired personnel, and
- 841 mid-level civilian separated personnel.

We sent questionnaires to a stratified random sample of each of the subgroups:

- 226 (all) of the high-level personnel,
- 222 of the mid-level military personnel.
- 200 of the mid-level civilian retired personnel, and
- 148 of the mid-level civilian separated personnel.

Of the total 796 people in our sample, we found that 39 were not eligible for our study. Consequently, the maximum number of eligible responses was 757. We received 658 completed questionnaires, a response rate of 87 percent. We had planned to analyze the non-respondents and project how they might have answered the questionnaire. However, our information about non-respondents was insufficient to make valid projections. We believe that the high response rate (87 percent overall and at least 75 percent for each sample stratum) provides adequate projections for the largest part of our study universe.

The following limitations on the data must be recognized:

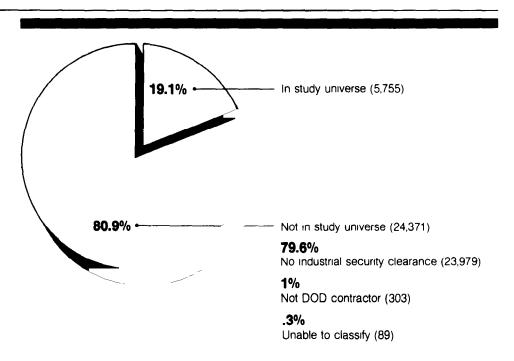

- The data on defense-contractor relationships are the respondents' own, unverifiable, self-reported perceptions. An independent, objective observer might describe the relationships differently. Some pretest respondents told us that they would expect at least some underreporting of the extent of DOD-contractor relationships.
- Projections are based only on the answers of the people who responded.
 No projections are made for the 13 percent of the sample who did not return a questionnaire. In addition, up to 3 percent who did respond failed to answer some questions. As a result, the projections for each question are made to slightly different subgroups.
- The estimated percentages and numbers of personnel provided in the tables in this report are approximate. Where estimates are based on the entire sample, we are 95-percent confident that they are within ±6 percent of the actual values for our universe. Estimates for the entire midlevel sample are also within ±6 percent of the actual values. For the smaller subgroups of the sample, estimates are less precise. For example, estimates for the mid-level civilian separations subgroup are accurate within ±10 percent. For the other sample strata, estimates are accurate within ±8 percent. Estimates which compare the answers of subgroups are also less precise. For example, comparisons of high-level with mid-level personnel are accurate within ±10 percent. For very small or very large estimated percentages, the confidence intervals are smaller. For example, for the entire sample we are 95-percent confident that an estimate of 10 percent would be accurate to ±4 percent. A projection of 5 percent would be accurate to ±3 percent.
- This report provides no information about the propriety of the relationships or the impact of any relationship on DOD's procurement process.

Our work was done in accordance with generally accepted government auditing standards.

Definition of the Study Universe

Based on responses to our questionnaire, we estimate that 5,755 former DOD high- and mid-level personnel (19.1 percent of the 30,126 who left DOD in fiscal years 1983 and 1984) had actually worked for a defense contractor. These 5,755 constitute our study universe. However, we could project to only about 5,100 because of those who did not respond.

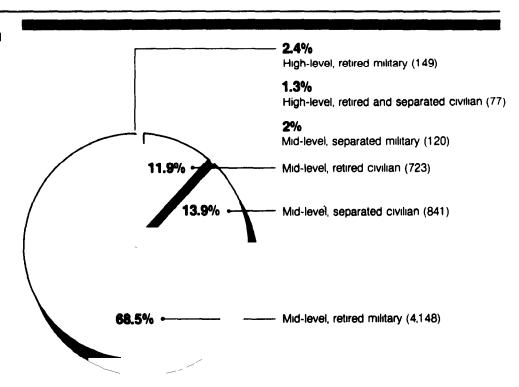

Figure II.1: Former Mid-Level and Above Personnel Who Left DOD in Fiscal Years 1983 and 1984

As figure II.1 shows, of the 24,371 (80.9 percent) not in the study universe,

- 23,979 (79.6 percent) had no industrial security clearance;
- 89 (0.3 percent) had a clearance but—because of their pay plan (for example, "expert," "advisory committee," or "canal zone employee") could not be readily identified as high- or mid-level; and
- 303 (1 percent) had clearances and could be classified by level but, based on the results of the eligibility questions (questions 1 and 2), we estimated that they did not work for a defense contractor.

Figure II.2: DOD Personnel Who Left DOD in Fiscal Years 1983 and 1984 and Subsequently Heid an Industrial Security Clearance

Note This figure includes the 5,755 personnel in the study universe that could be readily classified as high-level or mid-level, as well as 303 personnel holding security clearances identified in fig. If 1 as not working for defense contractors

As figure II.2 shows, of the 5,755 former DOD personnel included in our study group and the 303 personnel we project were not working for defense contractors, 4,417 were military and 1,641 were civilian. Of the military group,

- 149 were high-level retired (O-7 through O-10),
- 4,148 were mid-level retired (0-4 through 0-6), and
- 120 were mid-level separated (O-4 through O-6).

Of the civilian group,

- 77 were high-level retired and separated (SES and executive schedule),
- 723 were mid-level retired (GS-13 through GS-15), and
- 841 were mid-level separated (GS-13 through GS-15).

Post-DOD Employment Activities

The Congress has been concerned about the movement of government employees into the private sector and the movement of private-sector employees into government—the so-called "revolving door" phenomenon. The Congress has been especially concerned about DOD officers and high-level civilian employees taking jobs with defense contractors, fearing that this situation could lead to conflicts of interest. Also, the movement of DOD employees into jobs with defense contractors can affect public confidence in the government by creating the following perceptions:

- DOD personnel who anticipate future employment with a defense contractor might be perceived as using their position to gain favor with the contractor at the expense of the government.
- Former DOD personnel who work for a defense contractor might be perceived as using their contacts with former colleagues at DOD to the benefit of the defense contractor and to the detriment of the public.

Conflict-Of-Interest Laws

Section 207 of Title 18 United States Code—the post-employment conflict-of-interest statute—does not prevent government personnel from accepting employment with firms with whom they dealt on behalf of the government but restricts certain representational activity in the following way:

- Former government personnel may never make any oral or written communication as another person's representative to the government on a case, contractual matter, or other particular matter involving specific parties in which they participated "personally and substantially" while in government.
- For 2 years after leaving government service, former personnel may not
 make any oral or written communication as another person's representative to the government on any particular matter involving specific
 parties which was actually pending under their "official responsibility"
 in their last year of service.
- For 2 years after leaving government employment, some senior level
 officers and employees may not assist in the representation of another
 person by personal presence at an appearance before the government on
 any particular matter involving specific parties in which they personally and substantially participated while in government.
- For 1 year after leaving federal service, some senior level officers and employees may not represent anyone other than the United States by making any oral or written communication before their former agency

Appendix III
Post-DOD Employment Activities

on any particular matter pending before, or of substantial interest to, the agency.

Section 208(a) of Title 18 United States Code requires government personnel to refrain from personal and substantial participation as government personnel through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise in any particular matter affecting their financial interests or those of their spouses, minor children, partners, or certain organizations including those with which they are negotiating for or have an arrangement concerning prospective employment.

In the fiscal year 1986 Defense Authorization Act, the Congress required DOD personnel to report contacts with a contractor with whom they dealt regarding employment and to disqualify themselves from any procurement action until any future employment opportunities had been rejected. In the fiscal year 1987 Defense Authorization Act, the Congress precluded certain DOD procurement officials from accepting compensation for a 2-year period from certain defense contractors they had dealt with.

Results of Survey Questionnaire

Our work focused on post-employment activities of some former DOD personnel and on relating that activity to situations that could give the appearance that former personnel allowed private interests to affect the performance of government responsibilities before leaving government or took advantage of government connections after leaving government service. We are unable to identify what effect the fiscal year 1986 and 1987 acts referred to above might have had on our study universe.

Characteristics of Former DOD Personnel Employed by Defense Contractors

Of the former DOD personnel who went to work for a defense contractor, we estimate that

- 85 percent were retirees;
- 70 percent were retired mid-level military personnel;
- 75 percent were military and about half of the civilians had prior military service;
- 70 percent of the reported employment situations were with contractors whose business was primarily with DOD;
- 89 percent were employees, 6 percent were consultants, and 5 percent had both types of work experience;

- at least 89 percent worked for a company having more than 100 employees, and 62 percent with companies employing 1,000 or more employees;
- 94 percent used their technical military knowledge to some extent while working for a defense contractor; and
- 55 percent worked on the same general types of matters for a defense contractor that they worked on during their last 2 years at DOD.

Personnel in the study universe were generally working in positions that linked DOD and its contractors. We estimate that, while at DOD, about 73 percent of the study universe could have affected a defense contractor's work or the evaluation of that work. For example, these persons performed procurement policy, program management, contract administration, cost and technical analysis, and source selection functions. Further, we estimate that about 82 percent had business communications with DOD officials after leaving DOD.

Determination of the "Potentially at Risk" Group

The questionnaire used in this study was designed to identify relationships between work at DOD and subsequent work for defense contractors. In the questionnaire we asked

- about the extent to which the responsibilities of former DOD personnel could have affected the defense contractors for whom they later worked,
- whether former DOD personnel worked on the same weapons system, project, or program that they had worked on while at DOD, and
- whether former DOD personnel had responsibility for contracts which supported their subsequent work for a defense contractor.

We considered the individuals that reported being in any one of the three situations as "potentially at risk." The public could perceive that individuals employed by DOD may not have acted in the best interest of the government because they viewed a defense contractor as a potential employer Further, the public may perceive that former DOD personnel are taking advantage of inside contacts to the detriment of the government or that they influenced contract decisions to obtain subsequent employment.

Based on our analysis of responses of those who answered at least one of these questions affirmatively, we estimate that about 32 percent (1,661 persons) of the approximately 5,100 were "potentially at risk." We are 95-percent confident that the estimate is accurate within ± 6 percent (1,397 to 1,925 persons).

Effect of DOD Responsibilities on Subsequent Emp oyers To determine what responsibilities former DOD personnel had which could have affected their new employer, we asked respondents to categorize their prior DOD responsibilities as "procurement policy," "program management," "procurement or contract administration," "cost and technical analysis or other advisory services," "source selection," and "other responsibilities." The most frequently reported responsibilities were "cost and technical analysis" and "program management."

The respondents also assessed if their DOD responsibility had a "minimal," "moderate," "substantial," or "determining" effect on contractors. We defined "determining" responsibility as having the power to determine whether a contractor received a contract or whether the overall evaluation of the contractor's work was favorable or unfavorable. We classified each respondent according to the highest degree of responsibility reported for any of the categories. Responses were tabulated according to the highest degree of reported responsibility with up to two contractors—that is, the first defense contractor they worked for, their current defense contractor, or both.

Table III.1 summarizes respondents' answers to questions 29 and 38 on how their activities, decisions, or evaluations during their last 2 years at DOD had potentially affected the work of their future employers. About three quarters thought that they had had no effect. On the other hand, 9 percent had a "substantial" or "determining" effect, and 17 percent had a "moderate" or "minimal" effect, for a total of 26 percent.

Table III.1: Respondents' Perceptions of the Extent That Their Former DOD Responsibilities Affected Their Subsequent Employers

The estimates in this table are subject to sampling errors and incomplete responses as noted in app. I

Post-DOD Work on the Same Project

In questions 24 and 33, we asked the people in our sample if they had worked on the same weapons system, project, or program after leaving DOD and, if so, about how much of their time was spent on that project during their last 2 years with DOD. In questions 24b and 33b, we asked the people in our sample about the extent of time they spent on the same project while working for defense contractors. The respondents could report working on the same project during employment with up to two contractors. To project the responses, we tabulated the highest response for either work experience to classify individuals by how much time they spent on the same project.

We estimate that about 79 percent did not work on the same project that they worked on at DOD and that about 21 percent did. Table III.2 shows that about 10 percent—about half of the 21 percent—worked 60 percent or more of their time on the same project while at DOD. Similarly, table III.3 shows that about 13 percent worked 60 percent or more of their time on the same project for a defense contractor.

Responsibility for a Contract Supporting Future Work Based on respondents' answers to questions 27 and 36 as to whether, during their last 2 years at DOD, they had any responsibility for a contract that supported their subsequent work with a defense contractor, we estimate that 7 percent had such responsibility, while 93 percent did not. (See table III.4.)

Business Communication With DOD Officials After Leaving DOD To determine the degree of interaction between former DOD personnel working for defense contractors and DOD officials, we asked our sample how frequently they have had work-related communications with any DOD officials at any level. They could respond within a range from "daily" to "less often than once a month." They could report such communication during employment with up to two contractors. Our projections are based on the highest response reported for either work experience

We project that 46 percent had daily or weekly work-related communication, and 36 percent had less frequent contact with DOD officials—for a total of 82 percent. (See table III.5.)

Table III.5: Respondents' Frequency of Work-Related Communication With Any DOD Officials While Employed by a Defense Contractor

Frequency of work-related	High-level		Mid-level		Total	
communication	Number	Percent	Number	Percent	Number	Percent

Notes This table is based on responses to questions 25, 26, 34, and 35

The estimates in this table are subject to sampling errors and incomplete responses as noted in app. I

Fewer persons are projected to have had work-related communications with former DOD colleagues. Table III.6 shows that about 15 percent are estimated to have had daily or weekly communication with former colleagues, while 30 percent had such contact less frequently.

Relationship of "Potentially at Risk" Group to the Criminal Conflict-Of-Interest Statutes To determine the relationship of the activities of the "potentially at risk" group to the conflict-of-interest statutes, we analyzed information on business communication and length of time between leaving DOD and starting employment with a defense contractor.

The primary focus of both 18 U.S.C. 207 and 208 is on individuals who participate in a matter while employed by the government. Under 18 U.S.C. 207, those individuals are subject to restrictions on representing another party back to the government on that same particular matter involving specific parties. Under 18 U.S.C. 208, persons who seek outside employment in anticipation of leaving the government must disqualify themselves from participating in particular matters that affect an organization with whom they are seeking employment.

Our information was not sufficient to support a determination that a violation of either statute had occurred. However, these analyses further refine the "potentially at risk" group by isolating those individuals more likely to have crossed the boundaries set by these laws.

Potential for Representing Defense Contractors

To assess the potential for representational activities prohibited by 18 U.S.C. 207, we isolated those persons within the "potentially at risk" group who had business communication with DOD officials. We assumed business communication to be a requisite for representational activity. Persons in the "potentially at risk" category who communicate with DOD officials represent a group that should have the greatest potential for having crossed the boundary set by this law. We estimate that about 88 percent of the "potentially at risk" group—or 1,465 people—had business communications with DOD officials. (We are 95-percent confident that the number is between 1,207 and 1,723.) However, we do not know whether those individuals actually represented their employer in such communications or whether those communications were in connection with the same particular matter involving the same specific parties that they dealt with as government officials

Potential for Seeking Employment With Defense Contractors While Still at DOD

If they seek new employment before leaving federal service, government employees must exercise particular caution. Section 208 of Title 18 United States Code imposes criminal sanctions on federal officers and employees if they take an official action affecting an organization with whom they are negotiating for employment unless their responsibilities do not affect the potential employer or unless they disqualify themselves from activities affecting the potential employer. About 72 percent

of our "potentially at risk" group began employment before or during the month after leaving DOD. In addition, about 69 percent of the "potentially at risk" group had contact with their future employer as a result of their official government responsibilities during their last 2 years at DOD. (Only 15 percent of the "not at risk" group had such contact.)

This data raises a question as to whether some of the "potentially at risk" individuals might have taken actions affecting the organization with whom they were negotiating for employment before leaving government service. However, we do not know how many in this group actually negotiated for employment before leaving DOD or how many took appropriate steps to disqualify themselves from any responsibilities affecting their subsequent employer.

DOD Salary Compared With Defense-Contractor Salary

To determine if people leave DOD for higher-paying jobs with defense contractors, we asked our sample to compare their final DOD salaries (base pay plus allowances) with their initial salaries as defense-contractor employees (question 39). Based on respondents' answers, we estimate that 65 percent of former DOD personnel earned less when they went to work for a defense contractor. Further, 73 percent thought that, even when all benefits were included (question 40), they received less or about equal financial compensation when they went to work for a defense contractor.

Table I I.7: Comparison of Final DOD Salary With initial Post-DOD Salary

\$50,000+ more	18	10	0	0	18	>1	
Total	175	100	4,954	100	5,129	100	

Notes This table is based on responses to question 39

The estimates in this table are subject to sampling errors and incomplete responses as noted in app. I

Only 18 people—all high-level—reported earning \$50,000 or more with a defense contractor above their DOD earnings. One respondent expressed concern about this comparison, noting that comparing executive-level pre-DOD pay with post-DOD pay would be more appropriate

because most non-career appointees take a pay cut to work for DOD. (This respondent also indicated that he took a \$50,000 cut in pay to go to work for DOD.) Consequently, a \$50,000 increase over DOD pay may only reinstate past earning power and may not necessarily indicate that "non-career appointees" are lured into defense industries for lucrative pay. We know that 6 of the 18 people were civilians, but because the questionnaire was anonymous we could not determine how many of them were non-career appointees.

It is important to note that a reduced salary does not necessarily mean reduced income for retirees (about 85 percent of our study group). One respondent commented,

"Even though I receive less pay from my employer than I did from DOD, the net gain of my civil service annuity and my civilian salary is 20,000 a year more than I got in the Pentagon. Most of us who retire from DOD. .accept less pay, but earn more when our civil service annuity is added to our salary "

Opinions on Prohibiting Certain Post-DOD Emp oyment

We asked several questions about the effect of former DOD personnel's working for defense contractors and about proposed legislation prohibiting certain post-DOD employment. The majority of respondents (about 96 percent) considered the movement of DOD personnel into the defense industry as advantageous for defense contractors, and about 90 percent saw it as advantageous for DOD. (See table III.8.)

Table III.8: Respondents' Opinions About the Movement of Former DOD Personnel into the Defense Industry

Opinions about personnel	For DC)D	For defense co	ontractors
movement	Number	Percent	Number	Percent
Advantageous	4,616	90	4,921	96
Disadvantageous	121	3	7	>1
About equally advantageous and disadvantageous	374	7	183	4
Total	5,111	100	5,111	100

Notes This table is based on responses to question 3 (DOD) and question 4 (defense contractors)

The estimates in this table are subject to sampling errors and incomplete responses as noted in app 1

About 68 percent of our study group responded that banning certain post-DOD employment was disadvantageous to defense contractors. About 43 percent thought that it would be disadvantageous for DOD, while 36 percent thought that it would be advantageous for DOD. An estimated 63 percent indicated that they were opposed to legislation banning certain types of post-DOD employment. Though some respondents supported such legislation (about 35 percent), most respondents

Appendix III
Post-DOD Employment Activities

strongly opposed it. About 46 percent were "strongly opposed," while only about 13 percent "strongly favored" such legislation. We estimate that about 66 percent viewed employment restrictions as being unfair to former DOD personnel. Of these, 87 percent thought that restrictions would prevent people from using valuable skills, and 78 percent thought that the restrictions would reduce employment opportunities.

Questionnaire "Post DOD-Employment Survey"

U.S. GENERAL ACCOUNTING OFFICE

POST-DOD EMPLOYMENT SURVEY

INTRODUCTION

The U.S. General Accounting Office (GAO), an agency of the Congress, has been asked by the Senate Committee on Governmental Affairs and the Investigations Subcommittee of the House Committee on Post Office and Civil Service to collect information about the employment of former DOD (Department of Defense) personnel. You have been selected as part of a sample of middle and high level former DOD employees who left the Department in the 1982 to 1984 period and who subsequently may have done defense-related work or worked with defense contractors

Congress is considering legislation which could affect the employment of former DOD employees in defense related industries. The proposed legislation would not be retroactive and would thus not directly affect you. At the present time Congress needs to consider the opinions of former DOD employees and needs to obtain facts about post-DOD employment. Filling in this questionnaire will help to make Congress aware of the post-DOD employment situation faced by people such as yourself.

This questionnaire is anonymous. There is nothing on this form to identify you. Please mail back your completed survey in the enclosed addressed envelope as soon as possible. Return the post card separately after completing the questionnaire. We need the cards returned so that we can remind those who do not answer. There is no way to link the number on the post card with your returned survey.

Please return this questionnaire within one week. This rapid response is needed in order to make the survey results available to Congress as it considers legislation in the 1986 session. A prompt response will also save the expense of costly follow-up mailings.

Please disregard the numbers printed in parentheses. They are only used to assist in data processing. If you have any questions, please make a collect call to Jack Perrigo or Tom Denomme (202) 275-3980 at the GAO office in Washington. In the event the return envelope is misplaced, the return address is.

Attention: Jack Perrigo U.S. General Accounting Office Room 4102 441 G. Street, N.W. Washington, D.C. 20548

If you answered "No" please stop here and return the questionnaire. Thank you for your assistance.

POST-DOD EMPLOYMENT ISSUES There has been considerable discussion about the possible benefits and the possible problems which may occur because some DOD employees later go to work with defense contractors. Consider the advantages and disadvantages for DOD.	Proposed legislation would prohibit former DOD personnel from accepting any compensation from a government contractor with which the individual had "significant responsibilities for a procurement function" during the last two years of DOD service. This prohibition would be in effect for two years after leaving DOD. Two key definitions are:
 In your opinion how advantageous or disadvantageous for DOD is the movement of former DOD employees into the defense industry? (Check only one) 	Contractor: any parent, subsidiary, or affiliate of the contractor.
 Extremely advantageous Moderately advantageous 	Procurement function, negotiating, awarding, ad- ministering, approving contract changes, costs analysis, quality assurance, operation and development testing, technical advise or recommendation, approval
 Slightly advantageous About equally advantageous and disadvan- 	of payment, contractor selection, budgeting, auditing under the contract, or management of the procurement program
tageous 5 Slightly disadvantageous	 In your opinion how advantageous or disadvantageous would such legislation be for DOD? (Check only one) (10)
Moderately disadvantageous Extremely disadvantageous	1 Extremely advantageous
Now consider the advantages and disadvantages for	 2 Moderately advantageous 3 Slightly advantageous
4 In your opinion how advantageous or disadvantageous for defense contractors is the movement of former DOD employees into the defense industry? (Check only one)	About equally advantageous and disadvantageous Slightly disadvantageous
1 Extremely advantageous	6. Moderately disadvantageous
2. Moderately advantageous	7 Extremely disadvantageous
 3 Slightly advantageous 4 About equally advantageous and disadvantageous 	6 How advantageous or disadvantageous would such legislation be for defense contractors? (Check only one)
5 Slightly disadvantageous	Extremely advantageous
6 Moderately disadvantageous	Moderately advantageous Slightly advantageous
7 Extremely disadvantageous	4 About equally advantageous and disadvan-
POST-DOD EMPLOYMENT REGULATIONS	tageous 5 Slightly disadvantageous
Legislation is being considered which would change the regulations applying to post-DOD employment. Some new legislation would prohibit any employment with specified contractors. This differs from the present legislation which does not prohibit employment but only prohibits representing a contractor at DOD in certain circumstances.	6 Moderately disadvantageous 7 Extremely disadvantageous

f	Other types of responsibilities. If your activities could have affected any contractor in any other way, please rate and then describe the type of responsibility Type of responsibility	1	2	3	4	5	(51)

POST-DOD WORK WITH DOD CONTRACTORS AND SUBCONTRACTORS

20 In the table below describe your work since leaving DOD with organizations with DOD contracts (or subcontracts) In Column II indicate whether you are/were an employee or have had some other work relationship with each organization. (Full-time, salaried employees of consulting firms should check "employee") In Column IV estimate the proportion of the organization's total business which consists of DOD contracts or subcontracts

Note. Private Consultants and Owners or Part-Owners of Firms

If you have been an independent consultant, owner or part-owner of a firm, answer on a separate line for each of your clients which has a DOD contract/subcontract. Do not describe the firm which you own That is, if you have provided products or services for three organizations with DOD contracts (or subcontracts) report three separate lines of information. In Column II check "Other" for type of relationship. If you consult directly with DOD, consider the organization to be DOD and check the last column.

Comments From the Assistant Secretary of Defense for Force Management and Personnel

ASSISTANT SECRETARY OF DEFENSE

WASHINGTON, D.C. 20301-4000

FORCE MANAGEMENT AND PERSONNEL 23 March 1987

Mr. Frank C. Conahan
Assistant Comptroller General
National Security and International
Affairs Division
U.S. General Accounting Office
Washington, D.C. 20548

Dear Mr. Conanan:

This is the Department of Defense (DoD) response to the General Accounting Office (GAO) draft report entitled, "DoD Revolving Door: Post-DoD Employment May Raise Concerns," (GAO Code 391045, OSD Case No. 7126-A), dated February 13, 1987.

The DoD concurs with the findings of the draft report. We note, however, that no conclusions can be drawn regarding possible improprieties or violations of the laws. Specific comments on each finding are enclosed.

Section 922 of Public Law 99-145 significantly amended 10 USC 2397 concerning reports on employees or former employees of defense contractors; as amended, more stringent standards and enforcement authority are provided. The Department is implementing the amended reporting requirement to include revision of the Departmental directive, disclosure forms, information collection processes, complaint and review procedures, compliance guidance, and enforcement standards. With the expanded statutory authority and the revised management controls, possible violators of the law can be better identified and perceived improprieties reduced.

The Department of Defense appreciates the opportunity to review the draft report and provide comments.

Sincerely,

Chapman B. Co

Enclosure: As stated

Appendix V
Comments From the Assistant Secretary of
Defense for Force Management
and Personnel

DEPARTMENT OF DEFENSE COMMENTS
ON GAO DRAFT REPORT - DATED FEBRUARY 13, 1987
(GAO CODE 391U45) OSD CASE 7126-A

"DOD REVOLVING DOOR: POST-DOD EMPLOYMENT MAY RAISE CONCERNS"

FINDING A: Former Defense Personnel Working For Detense 0 Contractors. In seeking to answer the question of how often former Department of Derense (DoD) personnel work for defense contractors on the same project they worked on at the DoD, the GAO looked at high- and mid-level personnel who left the DoD during FY 1983 and FY 1984. The GAO limited its study to rormer DoD personnel who were thought to be working for defense contractors because each held an industrial security clearance. As a result of questionnaires sent to a stratified random sample of such personnel, the GAO estimated that of 30,126 high- and mid-level personnel who left DoD in FY 1983 and FY 1984, 5,755 (19.1 percent) worked for a defense contractor. Of these personnel, 4,417 were military and 1,641 were civilian. (p. 2, pp. 6-11/GAO Draft Report)

<u>DoD Response</u>: Concur. We note, however, that the survey <u>sample size</u> is not the universe population.

- Finding B: Concern Over Post-DoD Employment Activities.

 The GAO reported that the Congress has been concerned about the movement or Government employees into the private sector and or private-sector employees into Government--i.e., the so-called "revolving door" phenomenon. The GAO noted that the Congress is especially concerned about DoD military officers and high-level civilian employees taking jobs with defense contractors, fearing that this situation could lead to conflicts of interest. The GAO also observed that the movement of DoD employees into jobs with defense contractors can affect public confidence in the Government by creating certain perceptions; for example:
 - -- DoD personnel who anticipate future employment with a defense contractor might be perceived as using their position to gain favor with the contractor at the expense of the Government; and/or
 - -- Former DoD personnel who work for a defense contractor might be perceived as using their contacts with former colleagues at the DoD to the benefit of the defense contractor and to the detriment of the public. (p. 12/GAO Draft Report)

DoD Response: Concur. The DoD agrees that instances of improprieties among Federal employees do affect public confidence in the Government and should, to the extent possible, be eliminated.

Now on pp 6 to 7

Now on p 10

- 1

FINDING C: Conflict of Interest Laws. The GAO observed that Section 207 of Title 18, United States Code, restricts certain representational activity on the part of former Government personnel on matters in which they participated while in Government. The GAO further observed that Section 208(a) or Title 18, United States Code, requires Government personnel to retrain from personal and substantial participation as Government personnel through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise in any particular matter affecting organizations with which they are negotiating for, or have an arrangement concerning, prospective employment. (pp. 12-13/GAO Dratt Report)

DoD Response: Concur. The DoD agrees with the interpretation. The GAO Draft Report correctly interprets 18 USC 207 and 18 USC 208(a). We note, however, other statutory restrictions continue to apply, including those on selling (18 USC 281 and 37 USC 801(b)).

FINDING D: Appearance of Post-Employment Activities. The GAO focused on post-employment activities and situations that could give the appearance that former DoD personnel allowed private interests to affect the performance of Government responsibilities or took advantage of Government connections after leaving Government service. The GAO estimated from its survey responses that, while at the DoD, about 73 percent of the personnel it studied could have affected a defense contractor's work or evaluation or that work, while about 82 percent had business communications with DoD officials since leaving the DoD. (p. 15/GAO Draft Report)

DOD Response: Concur. The GAO statistics presented are results or the survey conducted by the GAO.

FINDING E: "Potentially At Risk" Group. The GAO reported that it considered individuals who reported (1) having had DoD responsibilities that could have affected the defense contractors for whom they later worked, (2) having worked on the same weapons system, project, or program that they had contracts on while at DoD, or (3) having had responsibility tor contracts which supported their subsequent work for a defense contractor as being "potentially at risk." The GAO estimated that about 26 percent of approximately 5,100 former high- and mid-level DoD personnel had responsibilities while at the DoD for defense contractors for whom they subsequently worked. Also, the GAO estimated that about 21 percent subsequently worked on the same system, project, or program for a defense contractor that they had worked on while with the DoD. In addition, the GAO estimated about 7 percent were responsible for DoD contracts that subsequently supported their post-DoD employment. Finally, the GAO

Now on pp 10 to 11

Now on pp 11 to 12

3

estimated that about 32 percent of the 5,100 have been in one or more of these three situations. The GAO concluded that the public could perceive that individuals employed by the DoD may not have acted in the best interest of the Government because they viewed a defense contractor as a potential employer. In addition, the GAO concluded the public may perceive that former DoD personnel are taking advantage of "inside contacts," to the detriment of the Government, or influenced contract decisions to obtain subsequent employment. (p. 2, pp. 15-16/GAO Draft Report)

DoD Response: Concur. Based on the GAO survey responses, these data are correct; however, no evidence exists to confirm instances of impropriety, if any.

FINDING F: Errect of DoD Responsibilities on Subsequent Employers. The GAO reported that 74 percent of survey respondents said their DoD responsibilities had no effect on their new employer, while 9 percent had a "substantial" or "determining" effect and 17 percent had a "moderate" (8 percent) or "minimal" (9 percent) effect. The GAO concluded, therefore, that a total of 26 percent had responsibilities while at the DoD for defense contractors for whom they subsequently worked. (p. 2, pp. 17-19/GAO Draft Report)

DoD Response: Concur.

FINDING G: Post-DoD Work on the Same Project. The GAO reported that 21 percent of respondents said they had worked on the same weapon system, project or program after leaving the DoD. The GAO noted that 10 percent worked 60 percent or more of their time on the same project while at the DoD. Also, the GAO noted that 13 percent worked 60 percent or more or their time on the same project for a defense contractor. (pp. 19-21/GAO Draft Report)

DoD Response: Concur.

FINDING H: Responsibilities for a Contract Supporting
Future Work. Based on responses to questions as to whether,
during their last two years at the DoD, they had any responsibility for a contract that supported their subsequent work
with a defense contractor, the GAO estimated that 7 percent
had some responsibility for a contract that supported their
subsequent work with a defense contractor. (pp. 21-22/GAO
Draft Report)

DoD Response: Concur.

FINDING I: Business Communication with DoD Orficials. The GAO projected that 46 percent of the respondents to the survey had "daily" or "weekly" work-related communication with DoD officials and 36 percent had less frequent contact--for a total of 82 percent. The GAO estimated that about 15 per-

Now on pp 15 to 16

cent had "daily" or "weekly" work-related communication with former colleagues, while 30 percent had contact less frequently. (pp. 22-24/GAO Draft Report)

DoD Response: Concur.

FINDING J: Relationship of "Potentially At Risk" to the Criminal Conflict-of-Interest Statutes. The GAO observed 0 Criminal Conflict-of-Interest Statutes. The GAO observed that its information was not sufficient to support a determination that a violation of applicable statutes had occurred. The GAO rurther observed, however, that its analyses further refined the "potentially at risk" group by isolating those individuals more likely to have crossed the boundaries set by these laws. The GAO found that 88 percent of the "potentially at risk" group had business communications with DoD officials. The GAO also found that about 72 percent of the "potentially at risk" group began employment within a month after leaving the DoD and 69 percent had contact with their future employer as a result of their official Government responsibilities during their last two years at the DoD. The GAO concluded that this data raises a question as to whether some of the "potentially at risk" individuals might have taken actions affecting the organization with whom they were negotiating for employment prior to leaving Government service. The GAO did not, however, know how many in this group actually negotiated for employment before leaving DoD or how many took appropriate steps to disqualify themselves from any responsibilities affecting their subsequent employer. (pp. 24-27/GAO Draft Report)

DOD Response: Concur. The DOD agrees that the collected survey information is insufficient to support a determination of statutory violation.

FINDING K: DoD Salary Compared with Defense-Contractor Salary. Based on the survey information, the GAO estimated that 65 percent of rormer DoD personnel earned less when they went to work for a defense contractor than they did when they left the DoD. The GAO observed that 73 percent relt that, even when all benefits were included, they received less or about equal financial compensation.

(p. 27-28/GAO Draft Report)

DoD Response: Concur. The results of this finding confirm other post-service income information on former and retired military members.

FINDING L: Opinions on Prohibiting Certain Post-DoD Employment. The GAO reported that about 96 percent of respondents considered the movement of DoD personnel to industry as advantageous for defense contractors and about 90 percent saw it as advantageous to the DoD. The GAO also noted that about 68 percent of the study group responded that banning certain post-DoD employment was disadvantageous

Defense for Force Management
and Personnel

4

to defense contractors. In addition, the GAO reported that about 43 percent thought it would be disadvantageous for the DoD, while 36 percent thought it would be advantageous for DoD. The GAO also reported that an estimated 63 percent indicated they were opposed to specific proposed legislation banning certain types of post-DoD employment. (About 46 percent were "strongly opposed," while only about 13 percent "strongly ravored" such legislation). The GAO estimated that about 66 percent viewed employment restrictions as being unfair to former DoD personnel. (Of these, 87 percent thought that restrictions would prevent people from using valuable skills, while 78 percent thought the restrictions would reduce employment opportunities.) (pp. 29-31/GAO Draft Report)

Now on pp. 19 to 20.

DoD Response: Concur.
