July 12, 2002

The Honorable John Conyers, Jr.
Ranking Member
Committee on the Judiciary
House of Representatives

Dear Mr. Conyers:

This report responds to your request for information on states' firearms-related laws and procedures involving restoration of gun ownership rights, permits for concealed carry of firearms, and convictions for domestic violence. The National Instant Criminal Background Check System (NICS)—used by the Federal Bureau of Investigation (FBI) and states to perform presale firearms background checks—relies largely on searching state criminal history records to prevent the sale of firearms to prohibited persons.¹ The states' firearms-related laws and procedures—such as those mentioned above—may affect how such records are used by NICS in preventing the sale of firearms to persons who are ineligible under applicable federal and state law.

As agreed with your office, this report presents information on the following topics:

- **Restoration of gun ownership rights**, including any differences among the states in how such rights may be restored to persons with criminal convictions and the extent to which persons who had their gun ownership rights restored subsequently committed new crimes.
- **Handgun concealed carry permits**, including the extent to which concealed carry permits exempt permit holders from a NICS background check when purchasing firearms, any differences among

¹Federal law prohibits persons from receiving or possessing a firearm if they (1) have been convicted of, or are under indictment for, a felony; (2) are fugitives from justice; (3) are unlawful drug users or are addicted to a controlled substance; (4) have been judged mentally incompetent or have been involuntarily committed to a mental institution; (5) are aliens illegally or unlawfully in the United States, or certain other aliens admitted under a nonimmigrant visa; (6) have been dishonorably discharged from the military; (7) have renounced their U.S. citizenship; (8) are under a domestic violence restraining order; or (9) have been convicted of a domestic violence misdemeanor. See 18 U.S.C. § 922(g) and 922(n).

the states in how they issue permits and monitor permit holders, and what actions the states take to revoke permits if the permit holders subsequently commit new crimes.

- **Domestic violence misdemeanor convictions**, including any differences among the states in how they ensure that domestic violence convictions in state criminal history repositories are accessible to NICS, and the extent to which persons convicted of domestic violence purchased firearms without being identified by NICS.

To address these issues, we obtained overview information from federal agencies with firearms-related research experience and/or law enforcement responsibilities—the Bureau of Justice Statistics (BJS); the Bureau of Alcohol, Tobacco and Firearms (ATF); and the FBI. For more detailed or specific analyses, as agreed with your office, we focused our work on six states—California, Florida, Massachusetts, Michigan, Texas, and Utah—which we judgmentally selected to illustrate a variety of applicable state laws and procedures. In visiting these states, we discussed applicable laws and procedures with responsible state and local officials and reviewed relevant statistics and other firearms-related information. We performed our work between June 2001 and May 2002, in accordance with generally accepted government auditing standards. Appendix I presents more information about our objectives, scope, and methodology.

Results in Brief

Each of the six states we visited offered at least one mechanism by which individuals who were ineligible to possess firearms because of a criminal conviction could have those rights restored. Of the four types of restoration mechanisms recognized under federal law—executive pardon, record expungement, conviction set-aside, and restoration of civil rights—pardons were universally available in all of the six states, while expungements were available only in Utah. The six states' criteria for restoration typically require a certain waiting period before application for relief, and persons convicted of some prior offenses are not eligible for restoration. Typically, individuals must petition the state or a county agency for relief (as in Florida and Michigan, for example), but some states—such as California and Massachusetts—automatically restore certain firearms rights lost after completion of sentence. On the basis of a review of limited data that were available from the selected states, we found that few persons who had their gun ownership rights restored were convicted of subsequent crimes.

In 26 states, ATF has determined that a concealed carry permit may exempt the permit holder from a NICS background check when

purchasing a firearm. As such, it is important that permit applicants be carefully screened and permit holders monitored to ensure they are eligible to possess firearms. The six states we visited screened permit applicants using federal and state criminal databases, monitored permit holders to ensure continued eligibility using automated and manual processes, and revoked permits when permit holders became ineligible to carry a concealed firearm. Based on a review of limited data that were available from the six states, the number of permits revoked ranged from 0.02 percent of permits issued (in Michigan) to 2.3 percent of permits issued (in Massachusetts). However, only two states—California and Massachusetts—took steps to recover revoked permits, and only one state—Massachusetts—had penalties available against persons who failed to voluntarily surrender their permits. In Florida and Texas—two states with NICS-exempt permit holders—state data show that over 3,200 permits were revoked after permit holders committed criminal offenses or became otherwise ineligible to carry a concealed firearm. However, state officials acknowledged they did not recover all revoked permits and, moreover, had no authority to enforce recovery of revoked permits. In these states, permit holders who became ineligible to possess firearms could have used their revoked permits to purchase firearms without a NICS background check. In contrast to Florida and Texas, Utah—a third state with NICS-exempt permit holders—requires gun dealers to verify the validity of all such permits before approving an NICS-exempt gun purchase, thereby preventing ineligible persons from using a revoked concealed carry permit to purchase firearms.

The six states we visited used various approaches to help make domestic violence misdemeanor convictions easier to identify in criminal history records—for example, by enacting domestic violence criminal statutes and flagging domestic violence offenses in their criminal history records. Despite these efforts, in the first 3 years of NICS operations, over 2,800 domestic violence offenders were able to purchase firearms without being identified by NICS. Moreover, almost 26 percent of NICS firearm-retrieval actions initiated by the FBI involved domestic violence offenders, even though overall this prohibiting category made up only about 14 percent of all NICS denials.² Various factors make it difficult to identify domestic violence misdemeanor offenses in a timely manner. For example, while

²Firearm-retrieval actions occur when a NICS background check is not completed within 3 business days, the firearms transfer legally proceeds, but the purchaser is later found to be ineligible to purchase firearms. In these cases, steps must then be taken to retrieve the firearm. Firearm-retrieval actions are also referred to as “delayed denials.”

states continue to work to automate and improve the overall quality and accessibility of criminal history records, this process has been ongoing since the early 1990s and is still incomplete. Also, domestic violence offenses may not be clearly identified in criminal databases, and the complex federal definition of domestic violence misdemeanor requires obtaining information that may not be immediately available in the state criminal history record. Moreover, allowing firearms sales to proceed after 3 business days when the outcome of the NICS check is unresolved contributes to the difficulty in preventing domestic violence offenders from purchasing firearms. If federal law allowed more than 3 days—up to 30 days, for example—to research these types of delayed NICS background checks, the number of firearm-retrieval actions during the first 3 years of NICS operations could have been reduced by over 50 percent. And, allowing more time to research these delayed transactions would have affected a relatively small percentage of all NICS background checks.

This report includes a recommendation (with respect to concealed carry permits) and a matter for congressional consideration (with respect to domestic violence convictions) to help minimize the number of ineligible persons who purchase firearms under NICS. In commenting on a draft of this report, Justice did not specifically address the recommendation or the matter for congressional consideration. Rather, Justice provided information about its efforts to help states improve the completeness and accuracy of criminal history records, including those relating to domestic violence. In commenting on behalf of Treasury, ATF generally agreed with our recommendation on concealed carry permits, but noted it would first need to examine the extent to which there is a problem and then consider options for how best to address the issue.

Background

Effective November 30, 1998, under the Brady Handgun Violence Prevention Act (Brady Act),³ licensed gun dealers are required to obtain background checks on purchasers before transferring (i.e., selling) a firearm. These background checks generally are to be conducted using NICS, a computerized system which is managed by the FBI. Under NICS, firearms are not to be transferred until a background check determines that the transfer will not violate applicable federal and state laws.

³Public Law 103-159 (1993).

However, if the background check is not completed within 3 business days, the transfer is allowed to proceed by default.

A NICS background check provides an automated search of criminal and noncriminal records—including records in both state and national databases—to determine a person’s eligibility to purchase a firearm. Specifically, a NICS check queries the following three information sources: (1) the National Crime Information Center, which provides access to fugitive arrest warrants and protective orders and information about deported felons; (2) the Interstate Identification Index, an index-pointer system that provides access to state criminal history records and FBI criminal history databases;⁴ and (3) the NICS Index, which maintains records about other persons’ ineligible to possess firearms, including mental defectives, illegal and unlawful aliens, and persons dishonorably discharged from the military. In practice, however, most NICS decisions about eligibility to purchase firearms are based on state criminal history records. During the first 3 years of NICS operations, over 90 percent of all firearms purchase denials were due to a disqualifying criminal history—primarily felony convictions (64 percent) and domestic violence misdemeanor convictions (14 percent). Because the vast majority—about 95 percent—of all criminal history records are state records, the capability of NICS to effectively screen firearms purchasers depends largely on the ability to access and interpret these state records.

As part of interpreting state criminal history records, NICS background check examiners consider post-conviction actions that may affect gun ownership rights.⁵ For example, persons prohibited from possessing firearms due to state criminal convictions may subsequently apply to the states for relief from these disabilities, and state actions to provide such relief may be recognized under federal law as restoring gun ownership rights.⁶ This avenue of relief arises out of the meaning of the term “conviction,” which is found within the federal definitions of felony and

⁴The Interstate Identification Index currently contains about 90 percent of the records checked by NICS.

⁵Federal firearms law prohibits certain persons from possessing or receiving firearms. For the purposes of this report, we use the terms “gun ownership rights” and “firearms rights” interchangeably to refer to the possession or receipt of a firearm.

⁶In order to relieve federal firearms disabilities, a state restoration action must restore a person’s civil rights—that is, the right to vote, the right to hold public office, and the right to serve on a jury.

domestic violence misdemeanor.⁷ Federal firearms law generally provides that a conviction will not be considered for purposes of determining firearms eligibility if the conviction “has been expunged, or set aside or [is an offense] for which a person has been pardoned or has had civil rights restored ... unless such pardon, expungement, or restoration of civil rights expressly provides that the person may not ... possess, or receive firearms.” Prior to October 1992, relief from firearms disabilities imposed by federal laws could be granted, based on a petition to the Treasury Department, under provisions enacted at 18 U.S.C. § 925(c). However, beginning with the fiscal year 1993 Treasury appropriations act,⁸ Congress has prohibited Treasury from expending any appropriated funds to act upon such applications for relief.

The Brady Act, in general, provides that any transaction in which a person presents to a licensed gun dealer a valid state permit that allows the purchaser to possess or acquire a firearm is exempt from a NICS check when purchasing firearms. Specifically, a firearms purchase is exempt from NICS if the purchaser presents a state permit that (1) allows the permit holder to possess or acquire a firearm and (2) was issued not more than 5 years earlier by the state in which the transfer is to take place. NICS regulations specify further that the purchaser must present a valid permit that was issued only after verifying that the permit holder was not ineligible to possess firearms under federal, state, and local law. In addition, after November 30, 1998, permits would qualify as exempt only if the information available to the state authority that issued the permit included NICS.⁹ In developing the NICS regulations, ATF concluded that a “permit to possess” a firearm would include a permit to carry concealed weapons. Thus, if a concealed carry permit meets the criteria described above, the permit holder would be exempt from a NICS background check when purchasing firearms, unless state law otherwise required such a check.

As noted previously, NICS denials are based largely on criminal history records—not only felonies but certain misdemeanors as well. Most notably, in the so-called Lautenberg amendment, Congress banned the

⁷18 U.S.C. § 921(a)(20) applies the meaning of conviction to crimes punishable for a term exceeding 1 year (i.e., felonies). Similarly, subsection (a)(33) applies this meaning to misdemeanor crimes of domestic violence.

⁸Public Law 102-393 (1992).

⁹27 C.F.R. 178.102(d).

possession of firearms by individuals convicted of a misdemeanor crime of domestic violence.¹⁰ As defined in the law, a domestic violence misdemeanor involves the use or attempted use of physical force or the threatened use of a deadly weapon by any of the following: a current or former spouse, parent, or guardian of the victim; a person with whom the victim shares a child in common; a person who is cohabiting with or has cohabited with the victim as a spouse, parent, or guardian; or a person similarly situated to a spouse, parent, or guardian of the victim. Implementing regulations provide that such definition includes any federal, state, or local misdemeanor that meets the criteria, irrespective of whether it is defined or labeled as “domestic violence.” Federal law further provides that a person generally is not considered convicted of a domestic violence misdemeanor under the following circumstances: (1) if the person was not represented at trial by counsel (unless he or she waived the right to counsel); (2) if the person was entitled to a jury trial, but the case was not tried by jury (unless he or she waived the right to a jury trial); or (3) if the conviction was expunged or set-aside, or the person was pardoned or had civil rights restored; and the person is not otherwise prohibited from possessing firearms.

Appendix II presents more information about the categories of persons ineligible to purchase firearms and the extent to which criminal history records are used to determine an individual’s eligibility to purchase firearms. Also, more details on NICS implementation and operation may be found in our February and April 2000 reports.¹¹

Restoration of Gun Ownership Rights

As mentioned previously, while federal restoration of firearms rights is no longer readily available, persons who are ineligible to possess firearms because of state criminal convictions may be able to have their gun ownership rights restored by the state.¹² Following a state restoration

¹⁰Section 658 of Public Law 104-208 (1996), commonly known as the Lautenberg amendment.

¹¹U.S. General Accounting Office, *Gun Control: Implementation of the National Instant Criminal Background Check System*, [GAO/GGD/AIMD-00-64](#) (Washington, D.C.: Feb. 29, 2000) and *Gun Control: Options for Improving the National Instant Criminal Background Check System*, [GAO/GGD-00-56](#) (Washington, D.C.: Apr. 12, 2000).

¹²However, federal criminal offenders can have their gun ownership rights restored only by a federal—not a state—procedure (*Beecham v. United States*, 511 U.S. 368 (1994)).

action, such persons would generally be recognized by the states and the federal government as once again being eligible to possess firearms.

Each of the four restoration methods recognized in federal firearms law can have a different effect on the underlying disqualifying record and the extent to which rights are restored. For example:

- **Pardon** – A pardon is, in general, an executive action that typically mitigates the punishment the law demands for an offense and restores any or all of the rights and privileges forfeited on account of the offense. Generally, the original criminal record is to be retained, with the pardon being noted on the record.
- **Expungement** – An expungement is a procedure in which the record of a criminal offense or conviction is typically destroyed or sealed. For example, arrest records may be expunged where the arrested person is acquitted at trial or the arrest is found to be unlawful; or expungement may be allowed after the passage of time. In some cases, expunged records may be retained and used by the state for certain limited purposes.
- **Set-aside** – A set-aside is an action that annuls or revokes a previously issued court judgment or order—such as a criminal conviction. To set aside a judgment is to make it void or of no effect and to deprive it of all force and operation as to future transactions. Set-asides are generally noted in the criminal record, which is retained.
- **Restoration of civil rights** – States may have procedures to restore any civil rights or other privileges that were lost upon a criminal conviction. These rights may be restored automatically upon completion of sentence or the passage of time; or restoration of rights may require an administrative or judicial process. Generally, restorations of civil rights are noted in the criminal record, which is retained.

Differences among Selected States' Restoration Laws and Procedures

Each of the six states we visited provided for one or more of the four methods described above for restoring gun ownership rights lost as a result of a state criminal conviction. Differences among the states primarily involved the number of such methods available, the conditions under which a person would be eligible for relief, and the process of applying for and receiving relief. Pardons were universally available in all six of the states we visited, while expungements were readily available in only one state—Utah. The states' criteria for restoration typically required a certain waiting period before being eligible to apply for relief. In Florida, for example, applicants had to wait 10 years following completion of

sentence to apply for a full pardon or 8 years to apply for a restoration of firearms authority. Also, persons convicted of some prior offenses—felonies involving a firearm, for example, in California—were not eligible for any restoration at all. In some states—such as Florida and Michigan—certain individuals are required to petition the state or a county agency for relief; other states—such as California and Massachusetts—have laws that automatically restore certain lost firearms rights after completion of sentence.

Appendix III presents more information about the states' laws and procedures dealing with restoration of gun ownership rights.

Crimes Committed by Persons Whose Gun Ownership Rights Were Restored

To determine if persons who had their gun ownership rights restored subsequently committed crimes, we obtained and analyzed available data on restoration actions in the six selected states. Our analysis was largely dependent on the availability of state data for each method of restoration and, as such, was generally based on limited data or data on small numbers of cases. On the basis of our limited review, we found that few persons whose gun ownership rights had been restored by the states were later convicted of additional crimes. Summary information for the six states is as follows. (See table 1.)

- In California, 71 persons received pardons between 1990 and 2000 that restored gun ownership rights. Of these, none had subsequently been convicted of a crime.
- In Florida, 79 persons received pardons (78 full pardons, 1 conditional pardon) between 1999 and 2001 that restored gun ownership rights. Of these, 1 person was subsequently convicted of a felony. In addition, 1 other person was arrested, but the record did not reflect whether the charge was a felony or a misdemeanor and no disposition was found. Another 51 persons received restorations of firearms authority between 1999 and 2001. Of these, none was subsequently convicted of a crime.
- In Massachusetts, 49 persons received pardons between 1990 and 2000 that restored gun ownership rights. Of these, none was subsequently convicted of a crime.
- In Michigan, 26 persons received pardons between 1969 and 1995 that restored gun ownership rights. Our review of 9 of these individuals found that none had subsequently been convicted of a crime. Another 2,006 persons had convictions set aside during 2000 and 2001. Our

review of 200 of these individuals found that 1 person had subsequently been convicted of misdemeanor domestic violence; 1 other person was arrested and charged with misdemeanor domestic violence, but no disposition was found. Also, 378 persons received restorations of gun ownership rights by county gun licensing boards between 1992 and 2001. Our review of 38 of these individuals found that 1 person was subsequently convicted of a crime—in this case, a misdemeanor.

- In Texas, 54 persons received pardons between 1992 and 2001 that restored gun ownership rights. Our review of 35 of these individuals found that none had subsequently been convicted of a crime. However, 3 of the individuals had subsequently been arrested—2 of the arrests involved misdemeanor charges and 1 involved felony charges. No dispositions were found for any of these cases.
- In Utah, 7 persons received pardons between 1990 and 2001 that restored gun ownership rights. Our review of 6 of these individuals found that none had subsequently been convicted of a crime.

Table 1: Crimes Committed by Persons after Their Gun Ownership Rights Were Restored in Selected States

States and type of restoration action	Time period	Restoration of gun ownership rights		Number of subsequent convictions
		Total number of actions	Number reviewed by GAO	
California				
• Pardon	1/1/90 – 12/31/00	71	71	0

^aAction provided for by state, but data not available for review.

Source: GAO analysis of state data and discussions with state officials. Appendix I provides more details about the state data reviewed and our analysis.

As mentioned previously, our analysis was largely dependent on the availability of state data for each method of restoration and, as such, was generally based on limited data or data on small numbers of cases. In some cases, statewide data were not available, and in other cases only certain time periods were covered. Where selected cases were analyzed—in Michigan, Texas, and Utah—the cases we reviewed were not randomly generated. As a result, this analysis is intended solely to illustrate what we found from the data we reviewed in each of the six states, and the results cannot be generalized beyond the timeframes and locations from which the data were collected.

Handgun Concealed Carry Permits

ATF has periodically reviewed each state's concealed carry permit program to determine whether it meets the criteria laid out in the Brady Act and NICS regulations for exempting permit holders from NICS background checks.¹³ As indicated below, as of January 2002, ATF determined that 26 states issued concealed carry permits that qualify to exempt permit holders from NICS background checks when purchasing firearms:

- In 16 states, all concealed carry permit holders are exempt from NICS background checks. Texas and Utah fall into this category.
- In 8 states, only certain permits issued before the implementation of NICS exempt permit holders from NICS background checks. In these states, permits issued after NICS was implemented (Nov. 30, 1998) do not qualify as exempt. Permits issued prior to NICS are "grandfathered" as exempt because, under interim provisions of the Brady Act, ATF had recognized these permits as a valid alternative to the interim Brady background check. Florida and Massachusetts fall into this category.
- In 2 states, only grandfathered permits were initially considered exempt. However, these states later made changes to their permit programs, bringing them into compliance with NICS regulations, and permits issued after the date of these program changes are now exempt from NICS.

In the other 24 states, no concealed carry permits are exempt from NICS background checks. In some cases, ATF has determined the state program does not qualify as exempt under NICS regulations (Michigan); in other cases, the permits do not qualify as exempt under state law (California).

Differences among Selected States' Procedures for Issuing and Monitoring Concealed Carry Permits

The six states we visited had several similarities in their background screening and processing of concealed carry permit applicants. In each state, for example, permit applicants were subject to a screening process involving a review of criminal justice and other data in federal and state databases. This screening process included both name-based and fingerprint-based checks performed by the states and the FBI. In addition to federal and state sources of data, Texas and Michigan routinely reviewed local records as part of the screening process. Some of the states were limited in the amount of time allowed to complete the background check and issue or deny the concealed carry permit. In Florida, a

¹³In addition to concealed permits, ATF reviewed state permits governing the purchase or possession of firearms to determine if any of these permits would qualify as exempt from NICS.

concealed carry permit must be issued within 90 days unless the applicant is determined to be ineligible or has a potentially disqualifying arrest without disposition information.

In addition to screening concealed carry permit applicants, the states monitored active permit holders to determine if and when any of them became ineligible to have a permit. For example, five of the six states (all except Massachusetts) had formal mechanisms in place for detecting whether permits holders had committed a disqualifying criminal offense. These methods included electronic matching of permit holders' names against state criminal records databases (Utah and Florida), as well as manual notifications to the state's permit authority by the courts when a concealed carry permit holder is convicted of a crime (Michigan). Once a permit holder is determined to be ineligible, all of the states have procedures in place for revoking the permit. But in only two states—California and Massachusetts—do authorities actively seek out permit holders and seize revoked permits if the individuals do not surrender their permits to the issuing agency.

Appendix IV presents more information about the states' laws and procedures involving issuing, monitoring, and revoking concealed carry permits.

Number of Concealed Carry Permits Revoked and Reasons for Revocation

The six states we visited reported that some concealed carry permit holders subsequently committed crimes that resulted in permit revocation, as shown in table 2. When compared to the total number of permits issued, the revocation rate of permit holders ranged from 0.02 percent in Michigan to 2.3 percent in Massachusetts—with the two “may-issue” states (California and Massachusetts) revoking a higher percentage of permits than the four “shall-issue” states (Florida, Michigan, Texas, and Utah).¹⁴ In the states where data on offense type were available (Michigan, Texas, and Utah), the vast majority of offenses that led to revocation were misdemeanors. Some states (Florida, Texas, and Utah) also reported a significant number of revocations due other disqualifying factors—such as mental disability (in Florida and Utah) and delinquent taxes (in Texas). Only Florida and Utah tracked the number of revocations that involved

¹⁴In shall-issue states, a permit must be issued if no statutory reason for denial is revealed during a background check. In may-issue states, a permit may be issued to eligible individuals after considering additional subjective prohibitors, such as the applicant's history and personal character.

firearms—specifically, firearms-related offenses accounted for about 9 percent (145 out of 1,593) of Florida’s revocations and about 7 percent (39 out of 584) of Utah’s revocations.

Table 2: Reasons for Concealed Carry Permit Revocations in Selected States

States and type of permit	Time period covered ^b	Permits issued	Reasons for permit revocation ^a			Percent of issued permits revoked
			Felony offense	Misdemeanor offense	Other disqualifier	
California (may-issue)	1/1/00 – 12/31/00	1,890		42		2.2%
Florida (shall-issue)	10/1/87 – 12/31/01	785,563		1,430 ^c	163	0.2
Massachusetts (may-issue)	1/1/99 – 12/31/01	177,572		4,046		2.3
Michigan (shall-issue)	7/1/01 – 3/11/02	34,712		9		0.02
Texas (shall-issue)	1/6/96 – 10/25/01	270,971	187	926	546	0.6
Utah (shall-issue)	1/1/94 – 12/31/01	46,148	70	431	83	1.3

^aState officials in California, Florida, Massachusetts, and Michigan could not separate revocation offenses into felonies and misdemeanors. They are categorized here as misdemeanors for purposes of general analysis.

^bExcept for slight differences in Massachusetts and Texas, the time periods in this column correspond directly with the data under “permits issued” and “reasons for permit revocation” data. In Massachusetts, the data for permits issued is from the time period 10/10/98 to 2/8/02. In Texas, the data for permits issued is from the time period 1/1/96 to 11/30/01.

^cFlorida also reported an additional 461 revocations that resulted from crimes committed prior to permit issuance, which the state had not discovered during the permit application background check.

Source: GAO summary of data provided by state officials.

Revoked Permits Could Be Used by Ineligible Persons to Purchase Firearms

More significant than the number of revocations, some states had no assurance of recovering permits from permit holders after revocation. As a result, revoked permits could be used by ineligible persons to purchase firearms without a NICS background check. As mentioned previously, among the six states, only California and Massachusetts actively seek out permit holders to recover revoked permits that have not been voluntarily surrendered. In addition, only Massachusetts has criminal penalties available for use against permit holders who do not surrender revoked permit. Regarding the other states, we noted the following issues regarding revoked permits:

- In Florida—a state where grandfathered permits exempt permit holders from NICS background checks when purchasing firearms—

state officials acknowledged they did not recover all revoked permits and the state had no civil or criminal authority to force the surrender of revoked permits. Between October 1987 and December 2001, Florida revoked 1,593 permits, the vast majority because of crimes committed by permit holders after the permits were issued. Another 461 permits were revoked because of crimes committed before the permits were issued. Because permits issued prior to the implementation of NICS exempted permit holders from NICS background checks, permits that were revoked and not recovered could have been used by ineligible permit holders to purchase firearms without a NICS check. To illustrate the extent to which revoked permits are not recovered by the state, Florida officials provided data on permits revoked in fiscal year 2001 as a result of crimes committed before the permits were issued. Of the 18 permits that were revoked for that reason, state officials told us that 7 of the 18 permits were not recovered.

- In Texas—a state where all concealed carry permit holders are exempt from a NICS check when purchasing firearms—state officials also acknowledged they do not recover all revoked permits and have no civil or criminal authority to force the surrender of revoked permits. State officials estimated that about 2 out of every 10 revoked permits are not voluntarily surrendered back to the state. Thus, based on the total number of revocations reported (1,659) between January 1996 and October 2001, this represents an estimated 332 revoked permits that were not recovered upon revocation. These ineligible permit holders could have used their revoked permits to purchase firearms without having a NICS background check.
- Two other states—California and Utah—have laws or procedures in place that prevent persons from using revoked permits to purchase firearms without a NICS background check. In California, for example, state law requires concealed carry permit holders to have a separate NICS background check when purchasing a firearm, thus preventing ineligible permit holders from purchasing firearms regardless of the status of their permit. Utah—another NICS-exempt state for permit holders—requires gun dealers to verify the validity of a concealed carry permit by contacting the state issuing authority before approving a NICS-exempt gun purchase. Rather than requiring another background check at the time of purchase, this verification simply requires gun dealers to visually inspect the permit, and then call the state’s Department of Public Safety to verify that the permit is still valid—that is, that it has not been suspended or revoked. According to Utah officials, this process helps the state monitor the legal status of permit

holders, and it prevents persons from using revoked permits to purchase firearms without a NICS background check.

According to ATF officials, after the Brady Act was passed in 1993, the states became responsible for conducting firearms purchase background checks. Because some states already required permits and background checks in order to purchase firearms, it seemed redundant to require another identical state background check just to comply with Brady. As a result, the law exempted permit holders from having a separate background check when purchasing firearms. When NICS became operational in 1998, the FBI and the states began sharing responsibility for firearms background checks, but the permit exemption continued based on criteria laid out in the Brady Act and NICS regulations for exempting permit holders from NICS background checks. Even so, ATF officials noted that some states require their concealed carry permit holders to undergo a separate background check at the time they make a firearms purchase. The officials went on to say that permit holders may sometimes commit crimes that disqualify them from possessing firearms, although the state has not yet taken action to revoke the permits. In such instances, a NICS background check at the time of purchase serves to identify permit holders who may be disqualified from purchasing a firearm and prevent those persons from obtaining firearms simply by presenting their permits.

Regarding Utah's permit-verification process that requires gun dealers to verify the current validity of concealed carry permits, ATF officials told us it is not clear whether ATF could require all states to have a similar process. Generally, ATF can set regulations for states to meet as prerequisites to exempting their permit holders from NICS background checks, provided these regulations are consistent with congressional intent. Among other things, ATF regulations already specify that exempt permits must be valid, issued no more than 5 years earlier, and must be issued only after verifying that the permit holder was not ineligible to possess firearms under federal, state, and local law. Regarding an additional regulation requiring point-of-purchase verification of the validity of exempt permits, ATF officials noted that this could raise concerns as an unfunded mandate, particularly in those states that do not participate in NICS and have no existing infrastructure at state agencies or licensed gun dealers for performing such verification. Nonetheless, ATF would consider such a regulation if there was compelling evidence to suggest that a problem did exist (e.g., data indicating that ineligible persons used revoked permits to purchase firearms without a NICS check), and that any new regulation was consistent with congressional intent under the Brady Act.

Domestic Violence Misdemeanor Convictions

The six states we visited used various approaches to help ensure that domestic violence misdemeanor convictions were identified in state criminal history repositories and were accessible to NICS. These approaches included establishing a specific domestic violence offense in the state's criminal code, defining domestic violence in other state statutes, enacting domestic violence penalty enhancement statutes, and flagging domestic violence offenses in the criminal records. For example, two of the states we visited—California and Michigan—had enacted specific criminal offenses related to domestic violence, which clearly differentiates these offenses from other misdemeanor assaults. Four states—California, Michigan, Texas, and Utah—had amended general criminal statutes (such as assault or battery) to create a separate penalty enhancement when the circumstances involved a family member or other relation. Florida, Michigan, and Utah also “flag” domestic violence offenses by notating the criminal record to clearly identify the offenses as domestic violence-related. Only Massachusetts had no mechanism for specifically identifying domestic violence offenses in the state's criminal history records.

Appendix V presents more information about the states' laws and procedures to help ensure that domestic violence convictions are accessible to NICS.

Some Domestic Violence Offenders Purchased Firearms under NICS

From November 1998 through September 2001, ATF data indicate that the agency received 10,945 referrals from the FBI requesting retrieval of firearms that had been sold to ineligible persons.¹⁵ These firearm-retrieval actions were the result of NICS background checks that could not be completed by the FBI within the 3 business days allowed under federal law. When this occurs, the sale is allowed to proceed—that is, the gun dealer may legally transfer the firearm without a response from the FBI as to the purchaser's eligibility. The FBI continues to research these transactions, even after 3 days have passed, to ensure that the purchasers were not prohibited individuals. Regarding the referrals noted above, after the firearms were legally transferred the FBI discovered that the purchasers should have been denied. Once the FBI made these determinations, ATF was notified so steps could be taken to investigate

¹⁵FBI data show that 11,847 firearm-retrieval actions were referred to ATF during this same time period. According to an ATF official, the difference represents firearm-retrieval actions that were later purged from ATF systems in June 2001 because the FBI had subsequently overturned the underlying denials.

the transactions, retrieve the firearms, and refer any appropriate cases for prosecution.

As shown in table 3, about 26 percent of the firearm-retrieval actions referred to ATF during roughly the first 3 years of NICS were in the prohibited category of domestic violence misdemeanor. By comparison, in looking at all FBI NICS denials during approximately this same period,¹⁶ the category of domestic violence misdemeanor made up only about 14 percent of the total number of NICS denials. As shown by this comparison, the percentage of NICS firearm-retrieval actions involving domestic violence misdemeanors was disproportionately large—almost double—when compared with the percentage of all NICS denials that involved domestic violence misdemeanors. These transactions create concerns because they represent domestic violence offenders who were allowed to purchase firearms and who may pose risks to public safety.

¹⁶The ATF data on firearm-retrieval actions covers roughly the first 3 years of NICS operations—November 30, 1998, through September 30, 2001. The FBI data on all NICS denials covers approximately the same time period—from November 30, 1998, through October 7, 2001.

Table 3: Firearm-Retrieval Actions Referred to ATF Compared with Total FBI NICS Denials – by Prohibited Category

Prohibited category	Firearm-retrieval actions referred to ATF (Nov. 30, 1998 – Sept. 30, 2001)		Total FBI NICS denials (Nov. 30, 1998 – Oct. 7, 2001)	
	Total	Percent of total	Total	Percent of total
Fugitive warrant 18 U.S.C. § 922(g)(2)	600	5.5%	5,620	2.8%
Mental defective 18 U.S.C. § 922(g)(4)	100	0.9	716	0.4
Domestic violence restraining order 18 U.S.C. § 922(g)(8)	132	1.2	7,647	3.8
Domestic violence misdemeanor 18 U.S.C. § 922(g)(9)	2,815	25.7	27,845	13.9
Other prohibited categories ^a	7,298	66.7	157,892	79.1
Total	10,945^b	100%	199,720	100%

^aATF and FBI did not report sufficient detail to allow analysis of the other prohibited categories.

^bDuring this same time period, FBI data show that 11,847 firearm-retrieval actions were referred to ATF. According to an ATF official, the difference represents firearm-retrieval actions that were later purged from ATF systems in June 2001 because the FBI had subsequently overturned the underlying denials.

Source: GAO analysis of ATF and FBI NICS data.

It should be noted that the actual number of domestic violence offenders who purchased firearms under NICS may be larger than shown in table 3. We previously reported that roughly 1.7 percent of NICS background checks could not be completed within 21 days because the FBI was not able to obtain sufficient information to verify the purchaser’s eligibility.¹⁷ Based on the number of NICS background checks processed by the FBI through fiscal year 2001, an estimated 204,000 transactions would have fallen into this unresolved category. Even if only 1.6 percent (the average NICS denial rate for this time period) of these transactions involved prohibited persons, this would represent an estimated 3,200 additional prohibited persons who purchased firearms without being identified by NICS—over 800 of which would have been domestic violence offenders (based on the percentage of domestic violence misdemeanor firearm-retrieval actions shown in table 3). Furthermore, this number could be

¹⁷GAO/GGD-00-56, p.17. Although gun dealers are allowed to transfer firearms after 3 days if the NICS check is not completed, FBI examiners continue to research these unresolved transactions for up to 21 days to determine whether the transactions should have been approved or denied.

much higher, because the FBI has previously reported that delayed transactions are much more likely to involve prohibited persons than the average NICS checks.

According to FBI officials, researching domestic violence offenses can often take more than the 3 days allowed under the Brady Act. In a typical transaction, the NICS background check identifies an arrest for a misdemeanor assault but no matching disposition. The NICS examiner must then go back—in some cases to original police reports—to verify what happened and who was involved, in order to determine whether the offense meets the federal criteria for domestic violence misdemeanor. Furthermore, the information needed to confirm the conviction may not be in the automated record, and manual research is then required. If the offense was tried in a so-called court of non-record (e.g., a magistrate or justice of the peace court), the case may not have been reported to the state repository. Thus, the FBI may have to contact the local court or the original arresting agency to document the outcome.

Barriers to the Timely Identification of Domestic Violence Convictions

Various other factors contribute to the difficulty in identifying domestic violence convictions within 3 business days and, thus, preventing the associated firearm-retrieval actions. These factors include (1) the overall accessibility and completeness of state criminal history records, (2) the complex federal definition of domestic violence misdemeanor, and (3) the difficulty in identifying domestic violence offenses in the criminal history records.

Regarding the first factor, states are continuing to automate and otherwise improve the completeness and accessibility of their criminal history records. However, this process has been ongoing since the early 1990s and is still far from complete. For example, BJS recently reported on the status of efforts to improve criminal history records for background check purposes.¹⁸ According to the report:

- By mid-2001, a total of about 64 million records were held in state criminal history repositories. However, approximately 7 million (about 11 percent) of these were manual records and, thus, not instantly accessible to NICS.

¹⁸Department of Justice, BJS, *Improving Criminal History Records for Background Checks*, NCJ-192928 (Washington, D.C.: Feb. 11, 2002).

-
- Of the remaining 57 million automated records, an estimated 16 million records (28 percent) were not accessible through the Interstate Identification Index for background check purposes. That is, these 16 million records were instantly accessible only to the state holding the respective records.
 - Of the 41 million records that were automated and accessible through the Interstate Identification Index, the most recent BJS data indicate that perhaps 37 percent may not be fully useful for an instant check due to a lack of data on arrest dispositions.

To assist BJS in reporting on the completeness of criminal records, the FBI analyzed a sample of delayed NICS background checks that resulted from an open arrest with no disposition. Overall, the FBI found that these delayed transactions typically involved older arrest records—mostly ranging from over 5 years old to more than 15 years old. Specifically, more than 75 percent of the open arrests had occurred before 1995 and about 50 percent were found to have occurred before 1984.¹⁹

A second factor—the complex federal definition of domestic violence misdemeanor—further increases the difficulty of using state criminal history records to determine if an individual is ineligible to purchase firearms. As mentioned previously, FBI NICS officials acknowledged that researching domestic violence misdemeanor convictions often involves manual research using original court records—and possibly arresting agency reports—to verify what happened and who was involved, in order to determine whether the offense meets the federal criteria for domestic violence misdemeanor. These same issues were previously raised in congressional testimony following passage of the Lautenberg amendment. According to a representative of the research consortium SEARCH:²⁰

“Even in states where the criminal history record on its face will indicate ... an element of domestic violence, research ... will still be necessary to determine if the offender was represented by counsel...or had the opportunity for a jury trial [before firearms eligibility can be determined]. Because this type of information is not always recorded in original

¹⁹BJS NCJ-192928.

²⁰Testimony of Gerry Wethington, Director, Information Systems, Missouri Highway Patrol, on behalf of SEARCH, before the Subcommittee on Crime, House Committee on the Judiciary, March 5, 1997. SEARCH is the National Consortium for Justice Information and Statistics and was closely involved in all of the criminal history record information and other information aspects of the Brady Act and NICS.

records of entry, it may simply never be possible in many states to obtain this information or to make this determination.”

The SEARCH representative concluded that there may be a certain, but unknown, percentage of misdemeanor convictions that resist any attempt to determine whether they meet the Lautenberg test, because records are not available or do not indicate whether the offender had access to counsel or the right to a jury trial.

A third complicating factor is that misdemeanor criminal history records may not be clearly identified as domestic violence-related, thus requiring additional—sometimes manual—research. As BJS noted in a February 2000 report on improving criminal history records,²¹ identifying domestic violence misdemeanor convictions for purposes of a firearms background check presents a unique challenge. Domestic violence incidents have historically been categorized simply as assaults, making it difficult to segregate them from other criminal history records. Further, where additional research is necessary, misdemeanor criminal records may be more difficult to track down than felony records. In its recent report on the use and management of criminal history records,²² BJS noted that most state criminal repositories collect information only about the most serious classes of misdemeanor offenses. And, the general lack of comprehensive misdemeanor arrest and disposition data has previously been identified as one of the major deficiencies in state criminal history record systems.

In response to passage of the Lautenberg amendment, the FBI’s automated system for identifying persons with felony convictions was modified in May 2001 so that domestic violence offenders (and other ineligible persons) could be more readily identified. Under the new system, a “flag” can be set in the automated criminal history to indicate whether an individual is disqualified from purchasing firearms (signified by the letter D), cleared to purchase firearms (the letter C), or unknown or pending status (the letter X).²³ When a firearms background check identifies a

²²Department of Justice, BJS, *Use and Management of Criminal History Record Information: A Comprehensive Report, 2001 Update*, NCJ-187670 (Washington, D.C.: Dec. 2001).

²³The previous flagging system, implemented in 1992, identified only whether an individual had felony or misdemeanor convictions.

person with a disqualifying flag, the transaction can be immediately denied with no additional research required. Flags have historically been used to mark persons that have a felony conviction in their criminal record. However, for purposes of quickly identifying domestic violence misdemeanors, some questions remain. For example, while most states flag some or all felony convictions in their criminal history databases, only 19 states currently participate in the FBI's new flagging system for identifying domestic violence and other firearms disqualifiers. Also, as reported in a 1997 study sponsored by the Bureau of Justice Assistance,²⁴ several state central repository officials expressed concern over the reliability and consistency of flags set in criminal history records, and one state official said he would not trust a flag set by another state and would need to look at the offender's rap sheet before determining the applicant's firearm eligibility. In Michigan, for example, an FBI NICS audit found that felony flags were not always removed from state criminal history records when individuals had their firearms rights restored. The audit also concluded that certain domestic violence offenses were flagged as disqualifying the individual from purchasing firearms, even though the offenses did not meet the criteria for disqualification.

Our Previous Observations on Delayed NICS Transactions

In April 2000, we reported on the FBI's inability to complete certain NICS background checks within the 3 days allowed under the Brady Act.²⁵ In our report, we presented to the Congress as a matter for consideration three options for minimizing the number of these transactions that occur—(1) improve state criminal history records; (2) encourage states' participation in NICS; and (3) allow additional time for certain NICS background checks. These three options bear further discussion here in the context of preventing the sale of firearms to domestic violence offenders. However, given the long-term nature of improving state criminal records, and the reluctance of states to conduct their own NICS background checks, the third option—amending the Brady Act to allow more time to complete NICS background checks before allowing firearms sales to proceed—would have a more immediate effect on reducing the incidence of firearm-retrieval actions—including those involving domestic violence offenders.

²⁴Department of Justice, Bureau of Justice Assistance, *Early Experiences With Criminal History Records Improvement: Monograph*, NCJ-152977 (Washington, D.C.: May 1997).

²⁵[GAO/GGD-00-56](#), p.15-21.

-
- **Improve state criminal history records.** The first option was to continue providing grants to states for improving their criminal history records. During fiscal years 1995 through 2001, the National Criminal History Improvement Program (NCHIP) provided over \$350 million in grant funds to assist states to improve the quality and accessibility of their criminal history records, in order to support the implementation of NICS and enhance the effectiveness of NICS background checks. Among the five program priorities for fiscal year 2002, three directly relate to NICS: (1) establishing infrastructure to support the full implementation of NICS, including full state participation in the Interstate Identification Index; (2) supporting state court efforts to improve the completeness of criminal history records; and (3) encouraging states to focus on developing domestic violence record systems that are complete and accessible to NICS. NCHIP is a long-term approach that has resulted in many improvements to state criminal history records. However, our analysis of NICS firearm-retrieval actions indicates that existing criminal records systems are still not sufficient to ensure that ineligible persons—particularly domestic violence offenders—are prevented from purchasing firearms under NICS. Furthermore, in the most recent BJS summary of states’ NCHIP grant programs, none of the six states we visited reported any specific activities or accomplishments on improving the access to or quality of domestic violence misdemeanor records.
 - **Encourage state participation in NICS.** The second option was to encourage increased state participation in NICS. The FBI originally envisioned that most, if not all, states would conduct their own NICS background checks; however, half the states continue to rely on the FBI to conduct NICS checks for their states. In terms of access to records and expertise in interpreting criminal history records, FBI officials believe that states no longer necessarily have an advantage over FBI examiners. On the other hand, states typically have access to automated and manual records—including arrest dispositions—that are not accessible through NICS. Furthermore, states that conduct their own NICS background checks may have laws that make domestic violence (and other) firearm-retrieval actions less likely to occur. In Utah, for instance, state law prohibits gun dealers from selling a firearm until an affirmative response is provided by the state agency conducting the background check. In California, if background research reveals unresolved questions about a purchaser’s eligibility, the transaction can be put on hold until these questions are resolved.
 - **Allow additional time for certain NICS background checks.** The third option was to amend the Brady Act to allow more than 3 business days to research unresolved NICS background checks before allowing

firearms sales to proceed. FBI data indicate that, depending on how much additional time is allowed, such a change could significantly reduce the incidence of firearm-retrieval actions—including those involving domestic violence offenders. For example, data for roughly the first 3 years of NICS operations (Nov. 30, 1998 through Oct. 19, 2001) show that allowing up to 30 calendar days for background research would have reduced the number of firearm-retrieval actions by about 54 percent.²⁶ Although this is somewhat less than the 77 percent reduction we previously reported based on the first year of NICS operations, it represents a significant improvement nonetheless.²⁷ Furthermore, in terms of the burden on firearms purchasers, allowing more time to research unresolved transactions would affect a relatively small percentage of all NICS background checks. According to an FBI analysis of August 2001 NICS data, the vast majority—over 96 percent—of NICS background checks were completed in 5 calendar days or less. Because a significant number of firearm-retrieval actions involve domestic violence misdemeanors, reducing the total number of such actions would, in turn, help reduce the number of domestic violence offenders who are able to purchase firearms under NICS.

Conclusions

As required under the Brady Act, a firearms purchase generally may not proceed until the gun dealer has contacted NICS to determine whether the transfer of the firearm would violate federal firearms law and any applicable state law.²⁸ As a result, state laws and procedures—such as those discussed previously—can have a significant effect on NICS operations, particularly in how NICS examiners interpret state criminal history records to establish a purchaser's eligibility. Because of the variations in states' firearms laws, NICS examiners are challenged to identify the applicable federal and state laws for any particular transaction and make a decision to approve or deny the purchase within the 3 business days allowed under the Brady Act. In looking at the differences in how states restore gun ownership rights, issue concealed carry permits, and identify domestic violence convictions in their criminal history records, it is, therefore, important to consider how these actions may affect the operations of a federal program such as NICS.

²⁶By comparison, allowing up to 20 days would have reduced the number of firearm-retrieval actions by 38 percent; allowing up to 60 days would have reduced the number of firearm-retrieval actions by 87 percent.

²⁷GAO/GGD-00-56, p.23.

²⁸18 U.S.C. § 922(t).

Regarding the restoration of gun ownership rights, there is little doubt that persons who have their gun ownership rights restored by a state action may sometimes commit subsequent crimes—perhaps even crimes that would make them ineligible to possess firearms. Based on the limited number of cases we reviewed from the six selected states, we found few instances where such persons subsequently committed additional crimes. However, regarding how such actions may affect NICS, any such persons would, in all likelihood, be identified by a NICS background check if they later attempted to purchase a firearm. Although some observers may question whether it is appropriate to allow any restoration of gun ownership rights after such rights have been lost through commission of a crime, that issue is not relevant here for purposes of the potential effect on NICS’ ability to screen prospective purchasers and prevent ineligible persons from purchasing firearms.

On the other hand, state concealed carry permits—because they may exempt the permit holder from a NICS background check when purchasing firearms—can have a significant effect on NICS ability to prevent the purchase of firearms by ineligible persons. If states do not monitor their permit holders for continuing eligibility, and revoke the permits of persons who become ineligible to possess firearms, it is possible that ineligible persons could use revoked permits to purchase firearms—avoiding a NICS check that might have prevented the sale. ATF has determined that four of the states we visited issue concealed carry permits that exempt permit holders from a NICS check when purchasing firearms. In two of these four states, state officials told us they do not recover all revoked permits and, in fact, they have no authority to force such recovery. In these states, revoked permits could be used by ineligible persons to purchase firearms without a NICS check. States could avoid this potential problem by requiring all permit holders to have a separate background check at the time of purchase. A simpler solution—which is practiced in one of these four states—is to require gun dealers to verify the validity of the permit itself before approving a NICS-exempt gun purchase. This procedure allows the NICS exemption for active permit holders, while ensuring that ineligible persons cannot use revoked permits to avoid a NICS check when purchasing firearms.

The inability of NICS to access domestic violence misdemeanor records in a timely manner is particularly troubling, since these offenses represent individuals who should be prevented from purchasing firearms. Yet, during roughly the first 3 years of NICS operations, the percentage of NICS firearm-retrieval actions involving domestic violence misdemeanors (representing over 2,800 persons) was disproportionately large—almost

double—when compared with the percentage of all NICS denials involving domestic violence misdemeanors. Various factors make domestic violence misdemeanors difficult to identify in a timely manner. For example, while states continue to work to automate and improve the overall quality and accessibility of their criminal history records, this process has been ongoing since the early 1990s and is still far from complete. Also, domestic violence offenses may not always be clearly labeled as domestic violence, and the complex federal definition of domestic violence misdemeanor requires information that may not be immediately available in the state criminal history record. Allowing unresolved NICS transactions to proceed after 3 business days, when combined with these other factors, has resulted in numerous domestic violence offenders being able to purchase firearms without being identified by NICS. These are issues that have been known for years, yet they continue to pose problems for NICS.

FBI data suggest that allowing additional time to research unresolved NICS background checks before allowing firearms sales to proceed would significantly reduce the number of firearm-retrieval actions—including those involving domestic violence offenders. For example, based on data for roughly the first 3 years of NICS operations, firearm-retrieval actions would have been reduced by 54 percent if up to 30 days of research were allowed. And, based on the FBI's recent analysis of NICS transaction data, most background checks would not be affected by such a change—in fact, over 88 percent of the background checks were completed within 1 hour, about 95 percent were completed within 3 calendar days, and over 96 percent were completed within 5 calendar days. Thus, allowing additional time to research unresolved NICS background checks would affect a relatively small percentage of firearms purchasers, while at the same time helping to minimize the number of firearm-retrieval actions.

Recommendation for Executive Action

To minimize the possibility of ineligible persons using revoked concealed carry permits to purchase firearms without a NICS background check, we recommend that the Secretary of the Treasury consider developing regulations requiring states to implement point-of-purchase verification procedures, whereby the current validity of concealed carry permits must be verified by licensed gun dealers before transferring firearms to permit holders.

Matter for Congressional Consideration

To reduce the number of NICS firearm-retrieval actions and improve the ability of NICS to prevent domestic violence offenders from purchasing firearms, the Congress should consider amending the Brady Act to allow more than 3 business days to complete unresolved NICS background checks before firearms sales are allowed to proceed.

Agency Comments and Our Evaluation

We requested comments on a draft of this report from the Departments of Justice and the Treasury. On June 28, 2002, Justice's Assistant Attorney General for the Office of Legal Policy provided us written comments. The comments did not specifically address our report's recommendation or the matter for congressional consideration. However, Justice acknowledged that the problem of NICS delayed denials (which can lead to firearm-retrieval actions) primarily stems from incomplete or inaccurate state criminal history records. Justice also identified steps it is taking, principally through the NCHIP grant program, to reduce the NICS error rate and achieve the most complete and accurate criminal history record system possible. These steps include (1) directing NCHIP grant funding to assist states to automate and improve their criminal history record systems, (2) encouraging states to use NCHIP funds to flag records of misdemeanor domestic violence convictions, and (3) directing BJS to study and recommend ways to target NCHIP grants to improve the accuracy of criminal history records, including those relating to domestic violence.

We acknowledge that using NCHIP grant funds to improve the accuracy and completeness of state criminal history records is an appropriate and reasonable long-term strategy for reducing the number of NICS delayed denials and resulting firearm-retrieval actions. However, as we have noted in the report, these efforts have been ongoing since 1995, and yet significant numbers of firearm-retrieval actions have occurred during each year of NICS operations. Moreover, preliminary results from the BJS study noted above indicate that millions of state criminal history records remain incomplete or inaccessible by NICS. This suggests that a different approach is needed—if not permanently, then at least in the short term—to immediately reduce the number of domestic violence offenders and other ineligible persons who are able to purchase firearms under NICS. Allowing additional time to research unresolved NICS background checks before firearms sales can proceed would significantly reduce the number of NICS firearm-retrieval actions. At the same time, Justice could continue working with the states to achieve the long-term goal of improving state criminal history records to the extent that delayed denials and firearm-retrieval actions no longer posed a significant problem.

On June 24, 2002, Treasury provided us written comments by the Director of ATF. Generally, ATF agreed with the report's recommendation to consider developing regulations requiring states to verify the validity of concealed carry permits before allowing firearms transfers to proceed without a NICS background check. ATF noted, however, that it would first need to examine the extent to which persons with revoked permits have, in fact, been able to purchase firearms without NICS background checks. If a real problem is found to exist, then ATF would consider what options are available under current law to deal with the issue. The states that we studied were not maintaining data to facilitate determining to what extent, if any, that revoked permits have been used to purchase firearms without a NICS check. However, in our view, the fact that such a loophole exists and could be abused by persons legally prohibited from purchasing firearms is sufficient reason for ATF to take administrative action to foreclose the possibility of such transfers and, in turn, possibly prevent a firearm-related crime of violence.

ATF also commented that certain language in the report could be misinterpreted to imply that ATF favors repeal of the permit alternative under NICS, that ATF believes the rationale for allowing permit holders to avoid a background check at the time of sale is weaker now than it was when the Brady Act was passed in 1993, or that ATF believes holders of valid permits should be required to undergo a separate NICS check at the time of purchase. ATF reiterated that its mandate is to enforce the statute as enacted by Congress and enforce the permit provisions of the Brady Act in a manner consistent with the plain language of the statute as well as congressional intent. We modified our discussion of the permit alternative under NICS in order to clarify ATF's comments on this issue.

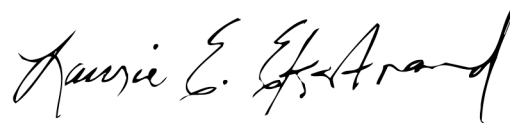

The full texts of Justice's and ATF's written comments are presented in appendixes VI and VII, respectively. In addition to these written comments, FBI and ATF officials provided us various technical clarifications, which have been incorporated into the report where appropriate.

We are sending copies of this report to the Attorney General, the Secretary of the Treasury, and interested congressional committees. Copies will be provided to other parties upon request. This report will also be available at no charge on the GAO Web site at <http://www.gao.gov>.

Appendix I: Objectives, Scope, and Methodology

Objectives

Representative John Conyers, Jr., Ranking Member, House Committee on the Judiciary, requested that we provide information about state laws and procedures regarding restoration of gun ownership rights, issuance of concealed carry handgun permits, and convictions for domestic violence. As agreed with the requester, our work focused on the following questions:

- **Restoration of gun ownership rights**, including differences among the states in how such rights may be restored to persons with criminal convictions, and the extent to which persons who had their gun ownership rights restored subsequently committed new crimes.
- **Handgun concealed carry permits**, including the extent to which concealed carry permits exempt permit holders from a National Instant Criminal Background Check System (NICS) check when purchasing firearms, differences among the states in how they issue permits and monitor permit holders, and what actions the states take to revoke permits if the permit holders subsequently commit new crimes.
- **Domestic violence misdemeanor convictions**, including differences among the states in how they ensure that domestic violence convictions in state criminal history repositories are accessible to NICS, and the extent to which persons convicted of domestic violence purchased firearms without being identified by NICS.

Scope and Methodology

To obtain nationwide perspectives on the three objectives, we met with Federal Bureau of Investigation (FBI) officials from the FBI's NICS Program Office in West Virginia, and the Bureau of Alcohol, Tobacco and Firearms (ATF) officials from ATF's Firearms Programs Division and Office of Chief Counsel in Washington, D.C. We obtained and reviewed federal reports prepared by the Department of Justice's Bureau of Justice Statistics (BJS), as well as relevant studies published in professional journals and studies prepared by private sector interest groups.

To obtain additional details about specific state laws and procedures, we met with state or local officials in six states—California, Florida, Massachusetts, Michigan, Texas, and Utah. As shown in table 4, and as discussed with the requester, we judgmentally selected these states in order to illustrate the range of state laws and procedures that address restoration of gun ownership rights, handgun concealed carry permits, and domestic violence misdemeanor convictions. Because these three issues may affect NICS' capability to identify persons ineligible to purchase

firearms, we also selected the states to reflect a mix of state participation types under NICS—full participant, partial participant, and nonparticipant.¹

Table 4: States Selected for Study of Firearms-Related Laws and Procedures

	State laws and procedures			State participation in NICS
	Restoration of gun ownership rights	Handgun concealed carry permit ^a	Domestic violence misdemeanors	
California	<ul style="list-style-type: none"> Pardon Automatic restoration 	<ul style="list-style-type: none"> May-issue state Local law enforcement agencies issue permits 	<ul style="list-style-type: none"> Specific criminal offense Penalty enhancement statute 	<ul style="list-style-type: none"> State conducts checks for all firearms purchases
Florida	<ul style="list-style-type: none"> Pardon Restoration by petition 	<ul style="list-style-type: none"> Shall-issue state State non-law enforcement agency issues permits 	<ul style="list-style-type: none"> Definition statute Flag set in criminal records 	<ul style="list-style-type: none"> State conducts checks for all firearms purchases
Massachusetts	<ul style="list-style-type: none"> Pardon Restoration by petition Automatic restoration 	<ul style="list-style-type: none"> May-issue state Local law enforcement agencies issue permits 	<ul style="list-style-type: none"> No laws or procedures identified 	<ul style="list-style-type: none"> FBI conducts checks for all firearms purchases
Michigan	<ul style="list-style-type: none"> Pardon Set-aside Automatic restoration Restoration by petition 	<ul style="list-style-type: none"> Shall-issue state Local law enforcement agencies issue permits 	<ul style="list-style-type: none"> Specific criminal offense Penalty enhancement statute Flag set in criminal records 	<ul style="list-style-type: none"> State conducts checks for handgun permits FBI conducts checks for long gun purchases
Texas	<ul style="list-style-type: none"> Pardon Set-aside Automatic restoration 	<ul style="list-style-type: none"> Shall-issue state State law enforcement agency issues permits 	<ul style="list-style-type: none"> Penalty enhancement statute 	<ul style="list-style-type: none"> FBI conducts checks for all firearms purchases
Utah	<ul style="list-style-type: none"> Pardon Expungement 	<ul style="list-style-type: none"> Shall-issue state State law enforcement agency issues permits 	<ul style="list-style-type: none"> Definition statute Penalty enhancement statute Flag set in criminal record 	<ul style="list-style-type: none"> State conducts checks for all firearms purchases

^aIn shall-issue states, a permit must be issued if no statutory reason for denial is revealed during a background check. In may-issue states, a permit may be issued to eligible individuals after considering additional subjective prohibitors, such as the applicant’s history and personal character.

Source: GAO’s analysis of various federal, state, and private sector information sources.

¹States that conduct all NICS firearms checks are known as full participant states. States that conduct NICS checks only for handguns are known as partial-participant states. States in which the FBI conducts all firearms checks are known as nonparticipant states.

Generally, in performing our work, we relied on testimonial and documentary evidence provided by the states, as well as similar evidence provided by the FBI and ATF. In using state and federal statistical data, we discussed the sources and accuracy of the data with appropriate officials. We also worked with the officials to reconcile any discrepancies we identified in the data.

The following sections present more details about our scope and methodology for each of the three objectives.

Scope and Methodology Regarding Restoration of Gun Ownership Rights

Our work focused on (1) summarizing nationwide perspectives and information on state laws and procedures dealing with the restoration of gun ownership rights, (2) comparing and contrasting specific restoration laws and procedures in selected states, and (3) determining the extent to which restorees subsequently committed new crimes.

Nationwide Perspectives

To obtain nationwide perspectives on restoration of gun ownership rights, we first obtained background information from relevant reports prepared by government agencies and studies published in professional journals about the various ways in which states restore a person's civil rights and gun ownership rights once those rights have been lost through a criminal conviction. Sources of information included BJS, the Department of Justice's Office of the Pardon Attorney, and the *International Journal of Comparative and Applied Criminal Justice*.

We also met with FBI NICS Operations Center officials to discuss (1) the extent to which restoration of rights is documented in state criminal history records and (2) how restoration of rights can affect NICS operations—specifically, how the FBI determines in a timely manner whether a particular state action restores an individual's right to purchase a firearm under applicable federal and state law.

Selected States' Restoration Actions

To obtain more detailed information about specific state restoration laws and procedures, we met with officials at various state and local agencies in California, Florida, Massachusetts, Michigan, Texas, and Utah. We obtained information about relevant state laws, regulations, and procedures that govern the restoration of gun ownership rights, focusing on the four methods recognized in federal firearms law—executive pardons, expungement of criminal records, set-aside of criminal convictions, and restoration of civil rights.

Subsequent Criminal Activity

To determine the extent to which restorees have been subsequently involved in criminal activity, we first obtained background information from relevant reports prepared by government agencies, studies published in professional journals, and reports prepared by private interest groups. Sources of information included the Department of the Solicitor General (Canada), the *Journal of the American Medical Association*, and the Violence Policy Center. We also met with officials from ATF's Firearms Programs Division and Office of Chief Counsel to discuss ATF's federal restoration of rights issues.²

From the six selected states, we analyzed data on state pardons, expungements, set-asides, and restorations of civil rights to determine whether persons whose firearms rights were restored in these states later committed criminal offenses. The following data were obtained from the six states:

- **California** – Data on pardons granted between calendar years 1990 and 2000.
- **Florida** – Data on pardons and restorations of firearms authority granted between July 1999 and June 2001.
- **Massachusetts** – Data on pardons granted between calendar years 1990 and 2000.
- **Michigan** – Data on pardons granted between March 1969 and July 1995, conviction set-asides granted between September 2000 and November 2001, and county restorations of firearms rights granted between October 1992 and June 2001.
- **Texas** – Data on pardons granted between calendar years 1992 and 2001.
- **Utah** – Data on pardons granted between calendar years 1990 and 2001 and expungements granted between January 2000 and March 2001.

We then had our Office of Special Investigations, or in some cases the state agencies themselves, check the names through criminal history

²As mentioned previously, persons who have lost the right to possess firearms—for example, because of a criminal conviction—can petition ATF for relief from firearms disabilities imposed by federal laws. However, since October 1992 Congress has prohibited ATF from using any appropriated funds to process such petitions, essentially leaving the states primarily responsible for restoring firearms rights.

databases to determine whether any of those persons had been convicted of additional crimes since the event that restored their rights.³

The selection of restoration data used in our analysis was largely dependent on the availability of state data for each method of restoration. In some cases, statewide data were not available and in other cases only data from certain time periods were available. In some states, the analysis was based on a review of a small number of cases, in order to facilitate cooperation from the states in helping to analyze the data. For example:

- None of the states had data available for analysis if gun ownership rights had been restored automatically (in California, Massachusetts, Michigan, and Texas) or through expungement (in Utah).
- Some pardon data (in Michigan and Texas) did not have sufficient identifying detail to enable us to perform a check of criminal history databases and, as a result, the cases we examined were limited to the number of pardons that had sufficient detail. In other instances (Florida pardons and Michigan set-asides), the number of cases we examined was limited in order to facilitate cooperation from the states in helping to gather and analyze the data.

As a result of these limitations, the analysis of the state restoration data is intended solely to illustrate what we found from the cases we reviewed in the six states we visited, and the results cannot be generalized beyond the timeframes and locations from which the data were collected.

Scope and Methodology Regarding Handgun Concealed Carry Permits

Our work focused on (1) determining the extent to which concealed carry permits exempt permit holders from NICS background checks when purchasing firearms; (2) comparing and contrasting laws and procedures for issuing, monitoring, and revoking concealed carry permits in selected states; and (3) determining the extent to which states revoke concealed carry permits when permit holders subsequently commit new crimes.

Exemptions from NICS Checks

To determine the extent to which concealed carry permits exempt permit holders from NICS background checks, we first reviewed the Brady Act and its implementing regulations to identify any relevant provisions

³Because expungement actions may, in most cases, destroy the record or make it unavailable for review, we did not do any subsequent analysis on the extent to which persons who obtained expungements later committed crimes.

exempting permit holders from NICS checks. We obtained ATF Brady permit exemption lists for 1999 and 2002 identifying which states issued permits that ATF had determined would exempt the permit holders from a NICS background check. We also met with officials from ATF's Firearms Programs Division and Office of Chief Counsel to discuss ATF's interpretation of the permit exemption language in the Brady Act and reasons for exempting permits in some states and not others. In the six selected states, we discussed the permit-exemption issue with state officials and identified any state laws affecting the exemption of state permit holders from firearms background checks.

Selected States' Laws and Procedures

To obtain more detailed information about specific state laws and procedures for concealed carry permits, we met with officials at various state and local agencies in California, Florida, Massachusetts, Michigan, Texas, and Utah. We obtained information about state laws, regulations, and procedures dealing with concealed carry permits—including (1) how the states screen and approve permit applicants, (2) how the states monitor active permit holders to ensure they remain eligible to possess firearms, and (3) what actions the states take to revoke permits when permit holders become ineligible.

Subsequent Criminal Activity

To determine the extent to which concealed carry permit holders subsequently commit crimes or other infractions that lead to permit revocation, we first obtained background information from relevant reports prepared by private interest groups. Sources of information included the Cato Institute and the Violence Policy Center.

From the six selected states, we obtained and analyzed available data on the number of concealed carry permits issued, the number of permits revoked, and the extent to which states recovered revoked permits from permit holders. Regarding revoked permits, we also obtained available data on the criminal offenses that led to the revocations—including whether these offenses were felonies or misdemeanors and whether they involved a firearm. The following data were obtained from the six states:

- **California** – Data on permits issued and revoked during calendar year 2000.
- **Florida** – Data on permits issued and revoked between October 1987 (program inception) and December 2001.
- **Massachusetts** – Data on permits issued and revoked between October 1998 (major program revision) and February 2002.
- **Michigan** – Data on permits issued and revoked between July 2001 (major program revision) and March 2002.

-
- **Texas** – Data on permits issued and revoked between January 1996 (program inception) and October 2001.
 - **Utah** – Data on permits issued and revoked between January 1994 and December 2001.

Our analysis was largely dependent on the availability of state data. In some cases, statewide data were not available, and in other cases only data from certain time periods were available. For example:

- California permit data were available only for calendar year 2000; Michigan data were available only since July 2001, when the state’s new shall-issue permit law went into effect; and Massachusetts data were available only since October 1998, when a major permit program change took place.
- Only Florida and Utah data contained detail about whether the crime leading to revocation had involved a firearm, and only Texas and Utah data identified whether the crime committed was a misdemeanor or felony.

As a result of these limitations, the analysis of the state concealed carry permit data is intended solely to illustrate what we found from the information we reviewed in the six states we visited, and the results cannot be generalized beyond the timeframes and locations from which the data were collected.

Scope and Methodology Regarding Domestic Violence Misdemeanor Convictions

Our work focused on (1) summarizing nationwide perspectives and information on state laws and procedures dealing with domestic violence, (2) comparing and contrasting selected states’ laws and procedures for ensuring domestic violence convictions are identified and reported to state criminal history repositories, and (3) determining the extent to which persons with domestic violence convictions are able to purchase firearms because such records were not accessible to NICS.

Nationwide Perspectives

To obtain nationwide perspectives and background information on domestic violence laws and procedures, we reviewed relevant reports by government agencies and private research groups about the various ways in which state criminal codes address domestic violence, as well as the general quality and accessibility of state criminal history records. Sources of information included BJS, the Bureau of Justice Assistance, the National Institute of Justice, the Justice Research and Statistics Association, and the Institute for Law and Justice.

Selected States' Laws and Procedures

To obtain more detailed information about specific state laws and procedures, we met with officials at various state and local agencies in California, Florida, Massachusetts, Michigan, Texas, and Utah. We obtained information about relevant state laws, regulations, and procedures dealing with domestic violence—including (1) how the states treat domestic violence in their criminal codes or other state statutes and (2) whether the states impose special identification or reporting requirements on domestic violence records.

Firearms Purchases by Domestic Violence Offenders

To determine the extent to which domestic violence offenders are able to purchase firearms under NICS, we first reviewed relevant studies and reports published in professional journals or private interest groups. Sources of information included the *Journal of the American Medical Association* and the Americans for Gun Safety Foundation.

We met with officials from the FBI's NICS Operations Center and ATF's Firearms Program Division and Office of Chief Counsel to discuss the extent to which domestic violence criminal history records cannot be obtained within 3 business days under NICS (as prescribed under the Brady Act) and the reasons why such records cannot be obtained. We obtained the following FBI and ATF data for roughly the first 3 years of NICS operations (Nov. 30, 1998 through Sept. 30, 2001):⁴

- We obtained FBI data on the number of NICS firearm-retrieval actions—those where the FBI took more than 3 days to determine the purchaser was ineligible and the firearms then had to be retrieved. We also obtained FBI data on the total number of NICS denials and the reason for these denials—broken out by each of the federal disqualifying factors (including domestic violence).
- We obtained ATF data on (1) the number of NICS firearm-retrieval actions referred to ATF for retrieval of firearms and (2) the number of these firearm-retrieval actions that had been denied because of a domestic violence misdemeanor conviction.

We used the FBI and ATF data to quantify the number of persons with domestic violence convictions who were able to purchase firearms when such records were not accessible to NICS within 3 business days. The federal data allowed a more comprehensive, nationwide analysis of such

⁴The FBI data on total NICS denials and disqualifying factors covered the time period November 30, 1998, through October 7, 2001.

transactions, whereas data from the selected states were more limited. For example, some states tracked the number of such transactions but not the disqualifying factors involved, while other states had laws which allowed additional time to complete transactions where the purchaser's eligibility could not be determined within 3 business days.

Appendix II: Eligibility to Possess Firearms under Federal or State Law

In determining whether a person is ineligible to possess firearms, applicable federal and state laws must be considered. While federal eligibility restrictions generally apply in all the states, states may place additional restrictions on possessing or purchasing firearms. Although other factors come into play, decisions about a person's eligibility to possess firearms largely are based on an assessment of state criminal history records.

Firearms Eligibility Restricted under Federal and State Law

Under federal firearms law, the factors that make a person ineligible to possess (or receive) firearms are generally described in Title 18, Chapter 44, of the United States Code¹—primarily Sections 922(g) and 922(n). Ineligible persons include the following categories:

- **Convicted felons and persons under felony indictment or information.** A felony is generally defined as any federal, state, or foreign offense punishable by imprisonment for a term exceeding 1 year. It does not include state offenses classified as misdemeanors and for which the punishment is 2 years or less in prison. In addition, what constitutes a conviction is to be determined by the laws of the jurisdiction in which the criminal proceedings were held.
- **Fugitives from justice.** A fugitive is generally defined as any person who has fled from any state, either to avoid prosecution or to avoid giving testimony in a criminal case. This definition includes persons who, knowing criminal charges are pending, leave the state of prosecution.
- **Unlawful drug users or persons addicted to a controlled substance.** This category includes persons who use controlled substances and have lost the power of self control and persons currently using controlled substances in a manner not prescribed by a licensed physician. An inference of current use may be demonstrated by a drug conviction or positive drug test within the past year, or by multiple drug arrests during the past 5 years.
- **Illegal or unlawful aliens.** This category includes aliens who are in the United States without a valid immigrant, nonimmigrant, or parole status, including aliens who entered the country without inspection and authorization or whose authorized period of stay has expired. In addition, certain other aliens lawfully admitted in nonimmigrant status are also ineligible, unless they meet certain exceptions defined in federal firearms law.

¹The Gun Control Act of 1968, Public Law 90-618 (as amended).

- **Persons adjudicated mentally defective or committed to a mental institution.** Mental defectives are generally defined as persons who have been determined by a court or other lawful authority to be a danger to themselves or others or who lack the mental capacity to manage their own affairs, including persons who have been found to be insane by a court in a criminal case. Commitment to a mental institution is generally defined as a formal commitment by a court or other lawful authority, including commitment for mental illness or other reasons such as drug use. It does not include persons voluntarily admitted to a mental institution.
- **Persons who have renounced their U.S. citizenship.** Persons ineligible under this category must have renounced their citizenship before a U.S. diplomatic or consular officer in a foreign country or before an officer designated by the U.S. Attorney General when the United States is at war.
- **Persons dishonorably discharged from the military.** This category includes separation from the U.S. armed forces by a dishonorable discharge or dismissal adjudged by a general court-martial. It does not include separation resulting from any other type of discharge.
- **Persons subject to a domestic violence restraining order.** This category includes persons who are subject to a court order that prohibits harassing, stalking, or threatening an intimate partner or child of an intimate partner, or placing such persons in reasonable fear of bodily injury. The order must have been issued after a hearing for which the person had actual notice and an opportunity to participate, and the order must either find a credible threat to the intimate partner or child, or by explicit terms prohibit the use, attempted use, or threatened use of physical force.
- **Persons convicted of a domestic violence misdemeanor.** This category includes any federal, state, or local misdemeanor where the offense involves the use or attempted use of physical force, or the threatened use of a deadly weapon, committed by a current or former spouse, parent, or guardian. To be considered ineligible, such persons must have had counsel and a jury trial (if applicable), unless those rights were waived.

In addition to federal law, states may have their own specific laws dealing with eligibility to possess or purchase firearms. In some states, only the federal eligibility restrictions apply; in other states, eligibility may go beyond what is required under federal law. In the six states we visited, for example:

- California, a state which conducts all firearms checks under NICS, prohibits the purchase of a firearm by persons convicted of certain

misdemeanors—such as assault, battery, and criminal possession of a firearm—for 10 years following the conviction.

- Massachusetts, a nonparticipant state under NICS, prohibits possession of firearms by anyone convicted of certain state-defined violent crimes—whether felonies or misdemeanors.
- Texas, a nonparticipant state under NICS, places no additional state eligibility restrictions on prospective firearms purchasers.
- Utah, a state which conducts all firearms checks under NICS, prohibits any juvenile adjudicated as delinquent within the past 7 years for an offense that would have been a felony if committed by an adult from purchasing a firearm.

Criminal History a Key Element in Determining Eligibility

In practice, federal and state determinations about eligibility to possess firearms hinge largely upon a person's criminal history, primarily whether the individual has been convicted of a felony or a domestic violence misdemeanor or has been arrested and/or convicted for drug-related offenses. For example, according to FBI data, NICS denied 199,720 firearms purchases during roughly its first 3 years of operation (from Nov. 1998 to Oct. 2001). As shown in table 5, the vast majority of these denials—almost 92 percent—were due to the purchasers' criminal histories.

Table 5: Reasons Why NICS Denied Firearms Purchases (Nov. 30, 1998 through Oct. 7, 2001)

Disqualifying factor	Total number of FBI NICS denials	Percent of total
Criminal history	182,817	91.5%
Felony	126,945	63.6
Domestic violence misdemeanor	27,845	13.9
Drug abuse	9,898	5.0
Other criminal history ^a	18,129	9.1
Fugitive from justice	5,620	2.8
Mental defective	716	0.4
Illegal/unlawful alien	1,178	0.6
Dishonorable discharge	117	0.06
Citizenship renounced	14	0.01
Domestic violence restraining order	7,647	3.8
Other disqualifying factor ^b	1,611	0.8
Total	199,720	100%

Note: Percentages may not equal 100 due to rounding.

^a“Other criminal history” includes denials due to (1) a state prohibitor, (2) multiple convictions for driving under the influence, and (3) arrest warrants that were not in the FBI’s National Crime Information Center database.

^b“Other disqualifying factor” includes denials due to other noncriminal prohibitors, such as state protection orders.

Source: FBI NICS Program Office.

In a July 2001 report on the implementation of the Brady Act and NICS, BJS reported similar data for state and local agencies that conduct firearms purchase background checks.² Specifically, during the year 2000, just over 66 percent of all state and local firearms purchase denials were denied due to felony convictions, felony indictments, or domestic violence convictions.

The number of criminal history records maintained by the FBI and the states is enormous—and continues to grow. As shown in table 6, according to BJS, there were over 62 million criminal history records in the United States as of December 1999.³ The vast majority of these

²Department of Justice, BJS, *Background Checks for Firearm Transfers, 2000*, NCJ-187985 (Washington, D.C.: July 2001).

³Department of Justice, BJS, *Survey of State Criminal History Information Systems, 1999*, NCJ-184793 (Washington, D.C.: Oct. 2000).

records—about 95 percent—were generated by the states.⁴ Furthermore, the total number of criminal history records increased by over 23 percent between 1993—the year the Brady Act was passed—and 1999.

Table 6: Number of Criminal History Records in the United States (as of Dec. 31, 1999)

	Total criminal history records	Percent of total
U.S. total	62,389,214	
State	59,183,600	94.9%
Federal	3,152,069	5.1
Foreign ^a	53,545	0.1
Selected states		
California	6,166,000	9.9%
Florida	3,754,200	6.0
Massachusetts	2,530,000	4.1
Michigan	1,259,500	2.0
Texas	6,157,100	9.9
Utah	392,800	0.6

Note: Percentages may not equal 100 due to rounding.

^aIncludes records on foreign fugitives and deported felons.

Source: BJS.

As noted previously, most NICS denials are based on criminal history records. As table 6 indicates, these criminal history records are generated predominantly by the states and are maintained in state criminal history repositories. As such, NICS must rely on the accuracy of state criminal history records in making decisions about the eligibility of prospective firearms purchasers.

⁴More recently, BJS reported that the total number of state criminal history records had increased to almost 64 million, as of July 2001.

Appendix III: Restoration of Gun Ownership Rights

This appendix discusses (1) how federal firearms law recognizes certain state methods of restoring gun ownership rights, (2) national overview information on the availability of these methods throughout the states, and (3) the extent to which these methods have been used by the six states we studied—California, Florida, Massachusetts, Michigan, Texas, and Utah.

Federal Law Recognizes State Methods of Restoring Gun Ownership Rights

Persons prohibited from possessing firearms due to a state criminal conviction may, under state laws, have those rights restored by the state in which the criminal offense occurred.¹ Certain types of state actions that serve to restore firearms rights are also recognized under federal law as a restoration of the federal right to possess firearms. This recognition arises out of the meaning of the term conviction—that is, federal law states that what constitutes a conviction is to be determined by the law of the jurisdiction in which the criminal proceedings were held. More importantly, federal law specifies that any conviction that has been expunged or set aside, or for which the person has been pardoned or has had his civil rights restored, is not considered a conviction for firearms eligibility purposes unless the expungement, pardon, or restoration expressly prohibits the person from possessing firearms.² Thus, federal firearms law recognizes state use of any of the four specified restoration methods to restore gun ownership rights to persons disqualified due to a state criminal conviction.³

Because relief from firearms disabilities is no longer readily available at the federal level,⁴ individuals convicted of disqualifying criminal offenses

¹Regarding federal criminal convictions, in *Beecham v. United States* 511 U.S. 368 (1994), the U.S. Supreme Court held that federal offenders can have their firearms rights restored only through a federal restoration action, such as a presidential pardon, and not a state restoration action.

²18 U.S.C. § 921(a)(20) applies this definition to felony convictions (i.e., crimes punishable for a term exceeding 1 year); subsection (a)(33) applies this definition to domestic violence misdemeanor convictions.

³The provisions of 18 U.S.C. § 921 regarding restoration of firearms rights apply only to criminal convictions, as previously defined. Section 921 does not address state restoration for noncriminal firearms disqualifiers, such as mental disability or drug addiction.

⁴Since October 1992, Congress has prohibited Treasury from expending appropriated funds to act upon petitions for relief from federal firearms disabilities under its authority at 18 U.S.C. § 925. Regarding federal crimes, however, relief from firearms disabilities may be obtained through a presidential pardon, under Article II, Section 2, of the United States Constitution.

turn to the states for restoration of gun ownership rights, through one of the four methods recognized by federal law—pardon, expungement, set-aside, or restoration of civil rights. States use these methods to restore firearms rights, as well as any civil rights—such as the right to vote, hold office, and serve on a jury—lost as a result of criminal offenses. Each of these methods can have a different impact on the disqualifying record, as well as the extent to which firearms or civil rights are restored, as described in the next section.

- **Pardon** – A pardon is, in general, an executive action that typically mitigates the punishment the law demands for an offense and restores any or all of the rights and privileges forfeited on account of the offense. The power to pardon for state crimes is generally vested in state governors or delegated to state pardon boards. An unconditional or full pardon generally absolves the offender from all legal consequences, direct or collateral, of the crime and conviction and generally restores civil rights.⁵ A conditional or partial pardon may require certain actions on the part of the offender or may absolve only a portion of the legal consequences of the crime. States vary in how they document pardon actions in their criminal history record systems. Most states retain records on the original offense, noting the pardon on the criminal history record, while some destroy or seal all records pertaining to the offense.
- **Expungement** – An expungement (or erasure) is a procedure whereby a court orders the annulment or destruction of arrest records or other court proceedings, such as a criminal conviction, provided certain conditions are met. When a conviction record is expunged, it may allow the offender to say, under certain circumstances, that he or she has never been convicted; expungement may not, however, automatically restore the offender’s firearms rights. Expungement can also result in the sealing of a record, but whereas certain parties can still examine an erased record, a sealed record can generally be examined only by court order. Expungement and sealing of records are usually provided for by statute for juvenile records, but may also apply to less serious records, such as arrest records for persons acquitted at trial or whose arrest was deemed by a court to be unlawful. Some states require the passage of a certain period of time before an offender can apply for

⁵A pardon does not necessarily overcome licensing qualifications for employment or occupation purposes, such as the requirement of “good moral behavior.” Thus, pardoned offenders may still be barred from employment in certain occupations (e.g., law, contracting) that have such licensing requirements.

expungement. Some states destroy expunged criminal records, while others note the action in the record or seal the record.

- **Set-Aside** – A set-aside is an action that annuls or revokes a previously issued judgment or order—such as a felony conviction. To set-aside a judgment is to make it void or of no effect and to deprive it of all force and operation as to future transactions. The majority of states note a set-aside in the offender’s criminal record; a few destroy the criminal record.
- **Restoration of Civil Rights** – Just as state law may impose certain civil and collateral disabilities on criminal offenders, it may also make available procedures to remove those disabilities and restore any rights that were lost upon conviction. In some states, civil and collateral (e.g., firearms) rights may be restored automatically upon completion of sentence or upon the passage of time, as provided for by statute; in other states, restoration of rights may require an administrative or judicial act, which may be based on evidence of rehabilitation. Most states note the restoration in the offender’s criminal record, while a few may destroy the record.

National Overview on State Methods to Restore Gun Ownership Rights

As mentioned previously, persons prohibited from possessing firearms due to a state criminal conviction may have those rights restored by the state in which the offense occurred, through any of four specified methods prescribed in federal firearms law—pardon, expungement, set-aside, and restoration of civil rights. Each of these four methods can have a different effect on a prohibited person’s underlying criminal conviction and the extent to which firearms rights are restored. Recent studies have shown that states vary in terms of (1) the restoration methods they employ, (2) the laws and procedures they have in place to implement those restoration methods, and (3) the underlying effect they impose on the criminal record.

In 1996, the U.S. Office of the Pardon Attorney reported on the availability of restoration methods among states for felony offenders⁶ and found that states vary in terms of the methods available for relief as well the laws they have in place to govern these methods. The variation in procedures was so great that the Office of the Pardon Attorney characterized state laws as a national “crazy-quilt” of disqualifications and restoration

⁶Department of Justice, Office of the Pardon Attorney, *Civil Disabilities of Convicted Felons: A State-by-State Survey* (Washington, D.C.: Oct. 1996).

procedures. The report also identified disagreement among agencies as to how the laws in particular jurisdictions should be interpreted and applied. Moreover, the Office of the Pardon Attorney found that a restoration of civil rights under state law—even through a governor’s pardon—does not necessarily restore firearms privileges.

Despite considerable variation among states, the Office of the Pardon Attorney determined that state laws regarding the loss and restoration of civil rights could be characterized in terms of the following five patterns:

- Civil rights are not lost upon conviction, or civil rights are lost when the offender is incarcerated and automatically restored upon release.
- Rights are lost upon conviction, then are automatically restored after completion of sentence, either through passage of time or by obtaining a certificate of discharge from the sentence.
- Rights are restored through judicial or administrative procedure, which typically requires completion of sentence and a waiting period and may also require proof of rehabilitation.
- Rights are restored only by pardon.
- Rights are permanently lost and cannot be restored.

Other studies of restoration of civil rights provide context as to the range and use of restoration methods by states and the effect these methods have on disqualifying criminal convictions. For example, a 1997 study regarding the legal consequences of felony convictions compared the availability of restoration methods among states in 1996 with the availability of methods 10 years earlier in 1986.⁷ Researchers found that, during those 10 years, states did not increase the number of restoration methods available to former offenders to restore civil rights. The study reported that in 1996 the availability of restoration methods among states was as follows:

- All 50 states allowed for pardons. In 22 states, the decision to pardon rested with the governor; in 16 states, the decision was shared between the governor and a board of pardons; in 11 states the decision rested with the board of pardons; and in 1 state, the decision required an act of the state’s general assembly.

⁷“Reducing the Legal Consequences of a Felony Conviction: A National Survey of State Statutes Ten Years Later,” *International Journal of Comparative and Applied Criminal Justice*, Vol. 21, No. 1 (Spring 1997).

- 27 states had some method of felony record expungement (including sealing, annulment, and withheld or deferred judgments). In 9 of the 27 states, the law provided for general expungement or related legal actions. In the other 18 states, the expungement statutes contained specific eligibility requirements for the sealing of criminal records.
- 42 states statutorily provided for automatic restoration of all or some civil rights for felony offenders. In 22 of the 42 states, the law restored one or more civil rights after completion of sentence. In the other 20 states, an existing general statute restored civil rights.

In October 2000, BJS reported on the status of state criminal history information systems.⁸ In its report, BJS included the results of a survey, taken in 1999, on the policies and practices of state criminal history repositories with respect to the four restoration methods, showing how each of the methods affected states' treatment of the underlying criminal history record. This survey showed that in 1999:

- 49 states reported statutes that provided for the granting of pardons. In 43 of the states, the pardon was to be noted in the criminal history record; in 3 states, the record was to be destroyed; in 1 state, the record was to be sealed; and 2 states did not indicate how pardons were treated in terms of criminal history records.
- 21 states had statutes providing for the expungement of felony convictions. In 9 of the states, an expunged criminal history record was to be destroyed; in 7 states, the expungement was to be noted in the criminal record; and in 5 states, the record was to be sealed. In two other states, state law did not specifically provide for expungement, but allowed records to be destroyed or sealed based on a court order.
- 40 states had statutes that provided for the set aside of felony convictions. In 33 of the states, the set-aside was to be noted in the criminal record; in 3 states, the record was to be destroyed; in 1 state, the record was to be sealed; and 3 states did not indicate how set-aside records were to be treated by the state repository.
- 41 states had legal provisions that provided for the restoration of a convicted felon's civil rights. In 33 of the states, the restoration was to be noted in the criminal history record; in 3 states, the record was to be destroyed; in 1 state, the record was to be sealed; in 2 states, restoration was not tracked or no action was taken; and 2 states did not indicate how restoration records were to be treated.

Information on Restoration of Gun Ownership Rights in Selected States

To obtain more detailed information regarding restoration of gun ownership rights, we reviewed state laws and procedures in six states—California, Florida, Massachusetts, Michigan, Texas, and Utah. Each of the six states we visited provided for the restoration of gun ownership rights through one or more of the four specified methods.⁹ Pardon was the most commonly utilized method, with all six states employing some form of pardon—either full or conditional—that restored gun ownership rights to previously ineligible persons. Expungement—available only in Utah—was the least commonly available method of restoring gun ownership rights.

For purposes of our study, we identified state laws and procedures to restore state firearms rights that may, in turn, also restore federal firearms rights by means of the four methods recognized under 18 U.S.C. § 921.¹⁰ In addition to identifying state actions that fully restore state and federal gun ownership rights, we also identified certain state restoration actions that only partially restore such rights. In the category of “restoration of civil rights,” some actions that restore state gun ownership rights do not restore federal firearms rights, because they do not provide full relief from disabilities—that is, they do not also restore civil rights (as prescribed in 18 U.S.C. § 921). Other state restoration actions do not restore federal firearms rights because civil rights were lost as a result of a noncriminal disqualifier (such restorations are not recognized under 18 U.S.C. § 921). Nevertheless, we present the information here in order to illustrate the complexity of state restoration laws and procedures and the interaction between state and federal firearms laws.

Regarding the specific state laws and procedures for restoring gun ownership rights, the six states differed primarily in three areas: (1) the processes for application of and approval for relief, (2) the conditions or criteria under which a prohibited person was eligible to receive relief, and (3) the effect restoration methods have on firearms rights. Table 7 shows the differences among the six states in these three areas.

⁹We focused on those restoration methods provided for by state statute. Gun ownership rights may also be restored by court actions—most notable, where convictions are “set aside” by an appellate court for reasons of procedural or substantive error, which would nullify the conviction and restore any rights lost as a result of the conviction.

¹⁰In some cases, these four restoration methods may also be used to restore other rights—such as civil rights—lost as a result of a state criminal conviction.

Appendix III: Restoration of Gun Ownership Rights

Table 7: Summary Information on Laws and Procedures Regarding Restoration of Gun Ownership Rights in Selected States

State	Method of restoration	Selected eligibility criteria	Application and approval process	Effect on gun ownership rights
California ^a	• Full pardon	Available 10 years after completion of sentence, but time limit may be waived by governor.	Residents apply to the court for a certificate of rehabilitation, which is reviewed by the governor, or apply directly to the governor; out-of-state applicants apply directly to the governor's office. All applicants subject to background checks.	For misdemeanors and felonies not involving a dangerous weapon, restores all state and federal firearms rights.
		Available for felonies and certain registrable misdemeanor sex offenses.		For felonies involving a dangerous weapon, does not restore state or federal firearms rights.
		Must have a clean criminal record subsequent to offense and good moral character.		Pardons without certificate of rehabilitation must include specific language restoring firearms rights.
	• Restoration of civil rights	Available 5 years following release from confinement for certain mental health disqualifications.	Automatic—no application or approval required.	Restores state firearms rights. Does not restore federal firearms rights.
		Available 10 years after completion of sentence for certain misdemeanors.	Automatic—no application or approval required.	Restores state firearms rights. Does not restore federal firearms rights.
Florida ^b	• Full pardon	Available 10 years after completion of sentence for felonies and domestic violence misdemeanors.	Applicants apply to state pardon board and are subject to background check and screening.	Restores all state and federal firearms rights.
		Must be a Florida resident; cannot have more than \$1,000 in criminal or traffic infraction penalties.	All pardons, except in cases of treason, are approved by state review panel led by the governor.	
	• Restoration of civil rights	Not available for impeachment; available for treason by legislative approval.	Same as full pardon.	Restores all state and federal firearms rights.
		Available for felonies, 8 years after completion of sentence.		
		All other criteria same as full pardon.		

Appendix III: Restoration of Gun Ownership Rights

State	Method of restoration	Selected eligibility criteria	Application and approval process	Effect on gun ownership rights
Massachusetts ^c	• Full pardon	Pardons usually not available for certain felony offenses.	Applicants apply to state parole board and are subject to background check; must demonstrate that police will grant a firearms permit.	Restores all state and federal firearms rights.
		Must show compelling need, have a clean criminal record subsequent to offense, and demonstrate good citizenship.	Pardons approved by governor-led review panel.	
	• Restoration of civil rights	After release from confinement for mental health disqualifier, with affidavit from physician.	Applicants apply to local police for state handgun permit, with physician's affidavit.	Restores state firearms rights.
		5 years after completion of sentence for nonviolent felonies and misdemeanors.	Automatic—no application or approval required.	Does not restore federal firearms rights. Restores state firearms rights for long guns only.
		Not available for crimes involving trafficking of controlled substances.		Does not restore federal firearms rights.
Michigan	• Full pardon	Not available for impeachment.	Applicants apply to state and are subject to a background check.	Restores all state and federal firearms rights.
			Pardons approved by the governor.	
	• Set-aside	5 years after completion of sentence for misdemeanor and specified felony convictions.	Applicants petition court of record and are subject to a background check.	For misdemeanors, restores all state and federal firearms rights.
		Cannot have more than one felony conviction.		For felonies, restores state rights to purchase and possess firearms; does not restore federal firearms rights.
• Restoration of civil rights	3 years after completion of sentence for low-grade or nonviolent felonies.	Automatic—no application or approval required.	Restores state firearms rights.	
	5 years after completion of sentence for specified felonies (e.g., arson).	Applicants apply to County Concealed Weapons Licensing Board.	Does not restore federal firearms rights. Restores state firearms rights.	
Texas ^d	• Full pardon and pardon for innocence	Full pardon not available for impeachment; available for treason with legislative approval.	Applicants apply to state pardon board and undergo a background check.	Restores all state and federal firearms rights.
			Pardons approved by governor with board recommendation.	

Appendix III: Restoration of Gun Ownership Rights

State	Method of restoration	Selected eligibility criteria	Application and approval process	Effect on gun ownership rights
	<ul style="list-style-type: none"> Firearms authority pardon 	<p>3 years after completion of sentence, only in extreme conditions that prevent livelihood.</p> <p>Not available for offenses involving violence, drugs, or firearms. Must have clean record, other than the offense in question.</p> <p>Applicants must obtain or apply for a state pardon and apply to U.S. Secretary of the Treasury for federal relief from disabilities.</p>	<p>Applicants can apply to local sheriff or state pardon board.</p> <p>Approved by the governor.</p>	Restores all state and federal firearms rights.
	<ul style="list-style-type: none"> Set-aside 	<p>Must fulfill conditions of probation.</p> <p>Not available for registered sex offenders, intoxication convictions, and state jail felonies.</p>	Applicants apply to court of jurisdiction.	Restores all state and federal firearms rights.
	<ul style="list-style-type: none"> Restoration of civil rights 	5 years after completion of sentence for felonies and domestic violence misdemeanors.	Automatic—no application or approval required.	<p>For misdemeanors, restores state firearms rights. Does not restore federal firearms rights.</p> <p>For felonies, restores state firearms rights only for possession in the home. Does not restore federal firearms rights.</p>
Utah ^e	<ul style="list-style-type: none"> Full pardon Expungement 	<p>5 years after completion of sentence, after all other judicial remedies, including expungement, have been exhausted.</p> <p>3 to 15 years after completion of sentence, depending on offense.</p> <p>Cannot have more than two convictions—only one felony—or prior expungements.</p> <p>Not available for registrable sex offenses and serious felonies.</p>	<p>Applicants apply to and are approved by state board, and are subject to background checks.</p> <p>Applicants apply to original court of record for approval, subject to background check by state agency.</p>	Restores all state and federal firearms rights.

Note: "Completion of sentence" generally refers to completion of incarceration or release from supervision or probation, whichever occurs later.

^aCalifornia recognizes expungements only for criminal records expunged before September 15, 1961.

^bFlorida also restores firearms rights in cases of deferred adjudication or suspended sentence—for felonies and domestic violence misdemeanors—3 years after completion of probation or other court-imposed condition.

^cMassachusetts also allows sealing of records—and the restoration of firearms rights—for a first-time misdemeanor drug (possession) conviction.

^dIn Texas, persons who are pardoned are also entitled to have records related to the pardoned conviction expunged.

^eUtah also allows criminal records to be set aside under certain circumstances, which make the records eligible for expungement and the individual eligible for restoration of gun ownership rights.

Source: GAO's analysis of state documents and discussions with state officials.

The six states we reviewed differed in the processes they have in place for restoring firearms rights. Most of the states either provide for automatic restoration of firearms rights for certain criminal disqualifications, or require an administrative or judicial petition to restore those rights. For example, California employs automatic restoration for persons convicted of certain misdemeanor offenses, 10 years following completion of sentence. Michigan, on the other hand, employs both procedures: persons convicted of low-grade or nonviolent offenses have their rights restored automatically 3 years after completing their sentence, while persons convicted of more serious felonies—such as arson or drug-related felonies—must apply to their County Concealed Weapons Licensing Board for relief 5 years after completing their sentence. In contrast, Utah has no separate provision for restoring firearms rights—individuals in that state must apply for a pardon or an expungement. States also differed in the processes they use for reviewing and awarding pardons. For example, in California, pardons are approved by the governor; in Utah, pardons are approved by a state pardon board; and in Massachusetts, pardons are approved by a review panel, which includes the governor.

All of the six states we visited require applicants to meet certain eligibility criteria—depending on the type of restoration method—to qualify for firearms relief, such as the passage of time or the absence of additional convictions. For example, persons in Florida must wait 10 years following the completion of their sentence to apply for a full pardon or 8 years to apply for a restoration of firearms authority. Persons convicted in Michigan of specific felonies—for example, arson—must wait 5 years after the completion of their sentence to apply for relief from their County Concealed Weapons Licensing Board. Many of the states also restrict the types of offenses for which the state will grant relief. For example,

California automatically restores firearms rights to offenders convicted of certain misdemeanors—but not felonies—10 years after completion of sentence. Some of the states also require that an applicant have no additional convictions other than the offense in question. In Utah, only certain offenders with two or fewer convictions—only one of which can be a felony—can apply to have their criminal history record expunged.

In four of the states we reviewed—California, Massachusetts, Michigan, and Texas—certain state restoration actions restore state gun ownership rights, but do not restore federal firearms rights. As a result, persons in these states who are authorized under state law to possess a firearm are still prohibited from doing so under federal law. In California, for example, state law automatically restores the state right to possess or purchase firearms to certain persons who have been involuntarily committed to a mental institution, 5 years after their release from confinement.¹¹ This restoration does not, however, restore federal firearms rights to persons prohibited under this category. Under 18 U.S.C. § 921, state actions to restore firearms rights are recognized as a restoration of federal firearms rights only for persons who lost those rights as a result of criminal disqualifiers (such as a felony conviction), as opposed to noncriminal disqualifiers such as confinement to a mental institution.

In Massachusetts, ATF officials have determined that the operation of state law is inconsistent with federal law in terms of restoring firearms rights—both handgun and long gun rights—to persons who have been adjudicated as mentally defective or involuntarily committed to a mental institution. Under Massachusetts statute, persons prohibited under the mental defectives category can seek to regain their state firearms rights if they provide an affidavit from a registered physician attesting that they are not disabled in a manner that should prevent them from possessing firearms. However, according to ATF officials, the same principle that prevents recognition of California’s mental health restoration statute under federal firearms law also prevents recognition of Massachusetts’ mental health restoration statute. That is, the specified methods of restoring firearms rights under 18 U.S.C. § 921 do not include state restoration of firearms rights lost as a result of noncriminal disqualifications.

¹¹California allows this restoration for persons who have been involuntarily committed for 14 days or less to a mental institution, which is a state firearms disqualification.

Also in Massachusetts, state law restores the right to possess certain long guns, but not handguns, to nonviolent offenders 5 years following the completion of sentence. According to ATF officials, because this restoration does not apply equally to both handgun and long gun rights, it cannot be recognized under federal law as restoring firearms rights. This stems from a ruling by the U.S. Supreme Court, *Caron v. United States*, in which the court held that a state restoration action would not restore federal firearms rights, if any restriction on an individual's right to possess firearms remained following the restoration.¹² Similarly, in Michigan, persons convicted of a nonviolent felony have their firearms rights automatically restored 3 years after completion of sentence, subject to certain conditions. However, the state's concealed carry law prohibits anyone convicted of a felony from ever obtaining a concealed carry permit. According to ATF officials, because of this restriction on the right to obtain a concealed carry permit, Michigan's restoration only partially restores firearms rights to persons convicted of a felony. As a result, *Caron* also applies, and such restorations cannot be recognized as restoring federal firearms rights.

Texas' law restores—to varying degrees—state firearms rights that were lost as a result of domestic violence misdemeanor and felony convictions. The law automatically restores, 5 years after completion of sentence, all state firearms rights to persons convicted of a domestic violence misdemeanor. The law also allows persons convicted of a felony to possess a firearm in their home 5 years after completion of sentence. However, according to ATF officials, the state law does not restore federal firearms rights for either category of offense—felony or misdemeanor—because it does not also restore the offenders' civil rights, as specified under 18 U.S.C. § 921(a)(20).

¹²*Caron v. United States*, 524 U.S. 308 (1998).

Appendix IV: Handgun Concealed Carry Permits

This appendix presents (1) a national overview of concealed carry permit programs and (2) information about selected states' permit programs—including how states screen permit applicants, how they monitor the eligibility of permit holders, and what actions states take to revoke permits if the permit holders commit crimes.

National Overview of Concealed Carry Permit Programs

Concealed carry laws allow gun owners, under certain conditions, to carry a concealed loaded firearm in public. While there is no federal law specifically addressing the issuance of concealed carry permits, 42 states have passed laws allowing citizens to carry certain concealed firearms in public after obtaining a permit from state or local law enforcement authorities. As shown in table 8:

- Twenty-nine states are commonly known as “shall-issue” states, where a concealed carry permit must be issued if no statutory reason for denial is revealed during a background check of the applicant.
- Thirteen states are known as “may-issue” states, where the police have discretion to grant concealed carry permits to eligible individuals after considering additional subjective prohibitors, such as the applicant’s history, character, and intended purpose for carrying a firearm.
- One state allows any legal gun owner to carry a concealed firearm without a permit, under most circumstances.
- In the remaining seven states, carrying a concealed firearm is generally prohibited.

^aSources differ somewhat as to whether Alabama and Connecticut should be classified as “shall-issue” or “may-issue” states. On the basis of our analysis of these states’ permit laws, we classified these states as “may-issue” states.

Source: GAO’s analysis of state laws and information from The Brady Campaign to Prevent Gun Violence, the National Rifle Association, the Firearms Law Center, and www.packing.org.

Federal law does not mandate that states establish certain eligibility criteria for issuing concealed carry permits. As such, state laws generally define the eligibility criteria that individuals must meet in order to obtain and maintain a concealed carry permit. To better understand the differences among states’ concealed carry laws, we visited six states. As noted in table 8, four of the six states we visited—Florida, Michigan, Texas, and Utah—were “shall-issue” permit states. The other two—California and Massachusetts—were “may-issue” states. The following sections provide a more detailed description of each state’s permit laws and procedures for screening permit applicants, monitoring the eligibility of permit applicants, and revoking permits if disqualifying offenses are detected.

Screening, Monitoring, and Revocation Procedures for Concealed Carry Permits among Selected States

In the six states we visited, the concealed carry permit programs were administered either at the state level or by local officials, depending on the state. Administrative procedures generally included permit application, applicant screening, and permit issuance, as well as permit monitoring and revocation. All the states we visited had formal procedures for performing background checks of permit applicants before issuing concealed carry permits. However, the thoroughness and types of databases used during background checks varied slightly. The states also had procedures in place for revoking permits once officials became aware, through monitoring efforts, that a permit holder had committed a disqualifying offense or otherwise became ineligible to have a permit. However, once a permit was revoked, only two of the states would ensure that permit holders returned the permits to the revoking authority by seizing the permits. Also, only one of the states provided for any enforcement penalties for failure to surrender a revoked permit.

Screening Permit Applicants

Each of the states we visited requires applicants to fill out a form with background information and previous criminal history, if any. In addition to the information presented by the applicant, each state performs independent background screening using a variety of federal and state criminal and noncriminal information sources. To determine eligibility to obtain a concealed carry permit, each state screened applicants based on various disqualifiers outlined in federal and state law. In addition to the federal firearms disqualifiers, such as prohibitions against convicted felons and illegal aliens, the concealed carry laws in these states identified additional disqualifiers—such as certain violent or firearms-related misdemeanors (California and Michigan), driving under the influence (Michigan), or the inability to demonstrate competency with a firearm in an approved safety course (all states visited).¹

As shown in table 9, in screening permit applicants for eligibility, the permit-issuing entity in each state is to consult both federal and state sources of criminal justice data. In all the selected states except Florida, the issuing entity is either a state or local law enforcement agency; Florida's Department of State issues the permits, while the background screening is performed by Florida's Department of Law Enforcement. In

¹The screening disqualifiers also may provide grounds to revoke a permit once it has been issued. Additional examples of state permit disqualifiers are discussed below in the section on revoking permits.

addition to name-based searches using both federal and state information sources, the states' screening procedures also include fingerprint-based checks performed by the state and the FBI.

Table 9: Methods Used by Selected States to Screen Persons Applying for Concealed Carry Permits

State and type of permit	Issuing entity	Information sources used for background screenings				Screening process time limits
		Nationwide databases	State criminal databases	Other state records	Local records	
California (may-issue)	County sheriffs and police departments	•	•	•		90 days
Florida (shall-issue)	Department of State Division of Licensing	•	•	•		90 days
Massachusetts (may-issue)	Police departments	•	•	•		40 days
Michigan (shall-issue)	County gun boards	•	•	•	•	30 days
Texas (shall-issue)	Department of Public Safety	•	•		•	60 days ^a
Utah (shall-issue)	Department of Public Safety	•	•	•		60 days

^aThis period can be extended to 180 days for good cause. If no decision is reached within 30 days of the 180-day limit, the application is effectively denied.

Source: GAO's analysis of state documents and discussions with state officials.

Specifically, with regard to nationwide sources of criminal and other disqualifying data, each state screens permit applicants against the three databases that make up the NICS system—the Interstate Identification Index, the National Crime Information Center, and the NICS Index. In addition, each state we visited queried its own state criminal history repository in reviewing permit applicants. The states also maintained other information sources that they consulted during the screening process. For example, all the states we visited reviewed records of fugitive warrants. In addition, most states reviewed listings of protection orders and mental health records. Also, some of the states consulted information sources unique to their respective states when screening permit applicants. California, for example, queried records on persons under supervisory release (i.e., on probation or parole), and Utah reviewed driver's license records.

Only two of the six states we visited included a check of local records as a routine portion of the permit-screening process. For instance, Texas law enforcement officials examine records kept at the local (county) level as a routine part of the concealed carry permit background investigation. A

Texas Department of Public Safety officer is to physically visit the local courthouse in the county where the applicant resides to examine local records. Also, local officials in Michigan are to check local records for pending charges and ongoing investigations, in addition to records in previous counties of residence if the concealed carry permit applicant has lived in the present county only a short period of time. The remaining states generally seek details from local records only when an automated records search reveals a possible problem with incomplete data—for example, a potentially disqualifying arrest without a disposition.

Another example of a difference in background screening processes concerns time limits. All the states we visited have some time limitation for the background check process specified in the state's law. However, Florida's concealed carry permit law requires the state to issue the permit after 90 days—even if the background check has not been completed—unless the applicant is ineligible or has a potentially disqualifying arrest without disposition information. According to Florida officials, this situation could and does occur when the state does not receive fingerprint results back from the FBI within the 90-day time limit. During fiscal year 2001, for example, 1,065 concealed carry permits were issued without a completed background check. In these situations, if the permit holders are later determined to be ineligible, the state must take action to revoke the permits—which occurred 461 times between 1987 and 2001. In the other states we visited, officials could use discretion in deciding whether or not to issue a permit when the background screening could not be completed within the time frames established by the respective state's concealed carry law.

Monitoring Permit Holders

Once concealed carry permits are issued, the states are to monitor permit holders to ensure continued eligibility and, if needed, revoke the permits of persons who become ineligible. Five of the six states we visited had formal mechanisms in place for detecting a disqualifying criminal offense or other disqualifying factors committed by permit holders. As shown in table 10, these mechanisms include computerized matching of names of concealed carry permit holders against state criminal records (Utah and Florida), manual notifications to the state's permit authority by the courts when a concealed carry permit holder is convicted of a criminal offense (Michigan), and point-of-purchase verification of a permit's validity (Utah).

Table 10: Methods Used by Selected States to Monitor the Eligibility of Concealed Carry Permit Holders

	Permit-monitoring methods			
	Automated database checks	Formal reporting of offenses ^a	Permit verification before NICS-exempt firearms purchase ^b	Informal monitoring
California	•			
Florida	•			
Massachusetts				•
Michigan		•		
Texas	•			
Utah	•		•	

^aGenerally, on an informal basis, law enforcement officials in all six states can report offenses by permit holders to other state or local officials. However, this column refers to a formal, structured mechanism for reporting such offenses to the permit-issuing authority.

^bAs mentioned previously, in California and Michigan, a concealed carry permit does not exempt the permit holder from a NICS background check when purchasing firearms. Therefore, no verification of the permit is necessary.

Source: GAO's analysis of state documents and discussions with state officials.

With regard to automated database checks, two states—California and Texas—have procedures to continually match permit holders' names against state criminal records. In Texas, for example, new criminal records are automatically matched against existing state records (including the database of permit holders) as they are added to the state criminal records repository. In two other states—Florida and Utah—state criminal records and other potentially disqualifying records are matched against the names of active permit holders on a periodic basis. Florida, for example, conducts periodic matches of permit holders against a variety of state databases and records, including criminal histories (weekly), protection orders and repeat violent offenders (daily), corrections records (monthly), and motor vehicle records (monthly). Utah conducts a daily computer check by matching records in the state criminal repository to the list of permit holders to determine if any of them have been charged with or convicted of a disqualifying offense. After Utah began daily matching in February 2000, the number of permits identified for revocation increased over 240 percent—from 75 revocations in 1999 to 256 revocations in 2000.

Rather than automated monitoring processes, Michigan depends on a formal process of reporting offenses committed by concealed carry permit holders. That is, when a permit holder is charged with an offense that could potentially result in revocation of his or her permit, the applicable prosecutor is to notify the county gun board that issued the individual's permit. Following prosecution, a court official is to notify the county gun

board about the results, including information about any disqualifying conviction.

Massachusetts, on the other hand, has no formal statewide mechanism for monitoring concealed carry permit holders for continued eligibility. Rather, monitoring is done on an ad hoc basis, such as when one local law enforcement entity requests information on a suspicious permit holder from another locality. Local permit-issuing authorities (police departments) have informal agreements regarding the sharing of criminal records on permit holders to help facilitate this process. Massachusetts officials told us they expect to have an automated system in place in the future to more closely monitor permit holders.

Among the states we visited, Utah uniquely monitors its concealed carry permit holders at the time of purchase of a firearm. That is, before selling firearms to a permit holder, a gun dealer is required to verify the validity of the permit presented, in order to allow the purchase to proceed without a NICS background check (ATF has determined that Utah permits qualify to exempt the permit holders from a NICS background check when purchasing firearms). In the other states we visited—Florida, Massachusetts, and Texas—where ATF allows certain concealed carry permits to be presented in lieu of a NICS check, the gun dealer performs only a visual inspection of the permit. In Utah, the dealer is to visually inspect the permit and call the state’s Bureau of Criminal Identification to verify that the permit is still valid and has not been revoked. Florida and Texas officials commented that, without this provision in their state laws, an individual conceivably could present a revoked concealed carry permit and purchase a firearm without a NICS check.

Revoking Permits

After detecting a disqualifying criminal offense or other disqualifying factor, all six states have similar procedures in place for revoking a concealed carry permit. In addition to criminal offenses, a revocation could also be warranted if the individual had developed a noncriminal prohibition against carrying a concealed firearm (e.g., diagnosed with a mental illness or subject to a domestic violence restraining order). As shown in table 11, firearms prohibitions in all the states we visited included federal disqualifiers, such as felony convictions, along with additional prohibitions put in place by the states.

Table 11: Criteria Used by Selected States to Revoke Concealed Carry Permits

	Firearms prohibitors leading to permit revocation				Revocation enforcement mechanisms	
	Federal prohibitors	Violent crimes	Misdemeanor crimes ^a	Other prohibitors ^b	Civil or criminal penalties	Permit seizure
California	•		•			•
Florida	•	•	•			
Massachusetts	•	•	•	•	•	•
Michigan	•		•	•		
Texas	•		•	•		
Utah	•	•	•			

^aThese are misdemeanors other than domestic violence, which is one of the federal prohibitors.

^bThese are other criminal or noncriminal activities not addressed under the federal prohibitors.

^cMassachusetts observes the federal prohibitors; however, state law is silent with regard to renunciation of citizenship and dishonorable discharge as criteria for revocation.

Source: GAO's analysis of state documents and discussions with state officials.

Regarding additional prohibitors, three of the six states visited revoke a concealed carry permit for any violent offense—whether a felony or misdemeanor. In addition, all six states identified certain misdemeanor offenses that would result in revocation. Michigan, for example, designates specific misdemeanors as revocable offenses upon conviction—including driving under the influence, assault, child abuse, and various firearms-related offenses. Some of the states had other unique disqualifiers that could lead to revocation for their permit holders. For example, in Michigan, the concealed carry permit law generally provides that pending felony charges in any state or federal jurisdiction can result in permit suspension and revocation. Massachusetts is similar in that an arrest warrant in any jurisdiction—whether in state or out of state—will result in permit revocation.² Texas also revokes permits for certain noncriminal activities—such as delinquency on taxes, student loans, or child support.

Of the six states we visited, only Massachusetts had laws establishing any civil or criminal penalties if an individual failed to return a revoked permit to state authorities. If a person fails to return his or her revoked permit, as required by Massachusetts state law, the state may charge the individual

²In contrast, to be considered a fugitive under federal firearms law—and thus prohibited from purchasing or possessing firearms—an individual must have fled the jurisdiction (i.e., the state).

with a misdemeanor offense punishable by a fine of up to \$1,000 or a jail term of up to 2-½ years. Massachusetts was also one of only two states (California was the other) where we found that local permit-issuing authorities would actively seek out and seize permits once they had been revoked. Massachusetts law generally requires that revoked permits be surrendered to the permit-issuing agency and, if not surrendered, the licensing authority is to take possession of the permit and the permit holders may be subject to civil or criminal penalties. In California, although not a requirement in state law, local law enforcement officials also told us that revoked permits are seized.

In contrast, state officials in Florida and Texas—two states with large numbers of concealed carry permit holders—told us that they did not actively seek out and recover revoked permits. Furthermore, neither state has sanctions in place to force the return of revoked permits or otherwise penalize permit holders who do not voluntarily surrender their revoked permits. Data from Florida and Texas illustrate the extent to which revoked permits are not surrendered.

- In fiscal year 2001, Florida issued over 25,000 concealed carry permits. Due to the 90-day limit on application processing mandated by state law, 1,065 of these permits were issued before the background check was completed. State officials later found that 18 of these persons were ineligible to have a concealed carry permit and these permits were then revoked. However, state officials told us that 7 of these persons did not voluntarily surrender their revoked permits.
- Although Texas officials did not have specific data, they estimated that about 20 percent of all revoked permits are not recovered by the state. Based on the total number of revocations (1,659) in Texas between January 1996 and October 2001, this would represent an estimated total of about 332 revoked permits that were not recovered.

Appendix V: Domestic Violence Misdemeanor Convictions

Among the federal firearms prohibitors, identifying domestic violence misdemeanor convictions for purposes of firearms background checks presents a unique challenge. Although the law establishing this prohibitor was retroactive, domestic violence offenses have historically been categorized as assaults, making it difficult to isolate domestic violence misdemeanors from other nondisqualifying misdemeanors. In particular, the complex federal definition of domestic violence misdemeanor requires information about court proceedings that may not be immediately available in automated criminal history records. Thus, additional manual research may be necessary to determine whether a misdemeanor offense constitutes a federal firearms prohibitor.

This appendix (1) provides details about the complex federal definition of domestic violence misdemeanor; (2) presents national overview information about the laws and procedures states have developed regarding domestic violence offenses; and (3) summarizes specific laws and procedures used in the six states we reviewed—California, Florida, Massachusetts, Michigan, Texas, and Utah.

Complex Federal Definition of Domestic Violence

In September 1996, as part of the 1997 Omnibus Consolidated Appropriations Act, Congress banned the possession of firearms by individuals convicted of a misdemeanor crime of domestic violence.¹ The so-called Lautenberg Amendment amended the Gun Control Act of 1968 to make it unlawful for any person convicted of a misdemeanor crime of domestic violence to possess or receive firearms. As defined in the law, a misdemeanor crime of domestic violence is an offense that is a misdemeanor under federal or state law and has, as an element, the use or attempted use of physical force or the threatened use of a deadly weapon, committed by (1) a current or former spouse, parent, or guardian of the victim; (2) a person with whom the victim shares a child in common; (3) a person who is cohabiting with or has cohabited with the victim as a spouse, parent, or guardian; or (4) a person similarly situated to a spouse, parent, or guardian of the victim.

In addition to the detailed definitional criteria and elements of the offense, the Lautenberg Amendment also prescribed a series of more complex exceptions to the firearms prohibition. Under these exceptions, a person is

¹Section 658 of Public Law 104-208 (1996).

not considered to be convicted of a domestic violence misdemeanor under any of the following circumstances:

- The person was not represented at trial by counsel (unless he or she waived the right to counsel).
- The person was entitled to a jury trial but the case was not tried by jury (unless he or she waived the right to a jury trial).
- The conviction was expunged or set-aside, or the person was pardoned or had his or her civil rights restored (if the law of the applicable jurisdiction provides for the loss of civil rights under such an offense) and the person is not otherwise prohibited from possessing firearms or ammunition.

Federal firearms regulations provide that the definition of domestic violence includes any misdemeanor that meets the criteria, regardless of whether the applicable state statute or local ordinance does or does not define the offense as “domestic violence.” For example, a person convicted of misdemeanor assault against his or her spouse would be prohibited from receiving or possessing firearms under the law. Also, the firearms prohibition applies to any disqualifying misdemeanor, regardless of the court of record (federal, state, or local) where the conviction occurred. In practice, most criminal history records are generated by the states, not the federal government. As such, with respect to domestic violence misdemeanors, the determination of a person’s eligibility to purchase firearms is based largely on review of state criminal history records and related documents.

As BJS stated in its February 2000 report on improving criminal history records,² identifying domestic violence misdemeanor convictions for purposes of a firearms background check presents a unique challenge. Although the law establishing this prohibiting category was retroactive, domestic violence incidents have historically been categorized simply as assaults, making it difficult to isolate them from other criminal history records. In addition, where additional research is necessary, information about misdemeanors may be more difficult to track down than felonies. In its recent report on the use and management of criminal history records,³

²Department of Justice, BJS, *Continuing Criminal History Records Improvement Evaluation: Final 1994-1998 Report*, NCJ-179768 (Washington, D.C.: Feb. 2000).

³Department of Justice, BJS, *Use and Management of Criminal History Record Information: A Comprehensive Report, 2001 Update*, NCJ-187670 (Washington, D.C.: Dec. 2001).

BJJ noted that most state criminal repositories collect information only about the most serious classes of misdemeanor offenses. Moreover, BJJ noted that the general lack of comprehensive misdemeanor arrest and disposition data has already been identified as one of the major deficiencies in state criminal history record systems. FBI NICS officials confirmed that researching domestic violence misdemeanor convictions can be laborious. It often involves manual research going back to the original court records—and in some cases to arresting agency reports—to verify what happened and who was involved, in order to determine whether the offense constitutes a federal firearms prohibitor.

National Overview of Efforts to Identify Domestic Violence Offenders

In general, domestic violence misdemeanor conviction records are maintained, along with all other types of criminal records, in state criminal history repositories. Some states have developed specific systems or procedures for identifying and collecting data on domestic violence offenders, with the effect of making such records more easily identifiable for law enforcement and for other purposes.

National Institute of Justice

In a July 1996 report to Congress,⁴ the National Institute of Justice reported that many states were collecting data (or implementing systems to collect data) on domestic and sexual violence offenses. According to state survey results, 35 of 47 responding states and territories collected domestic violence statistics annually; however, there was wide variation among states with regard to what information was collected and how it was gathered—reflecting the differences in how states approached these issues and their existing structures for collecting general crime data. For example, some states enacted specific domestic or family violence statutes that clearly defined this as an offense; some states had not designated domestic violence as a separate offense but had instituted reporting systems for cases that could be characterized as such; in states with an incident-based crime reporting system, some had derived domestic violence crime statistics from the existing system; and in states lacking incident-based capability, some had created domestic violence reporting systems.

⁴Department of Justice, National Institute of Justice, *Domestic and Sexual Violence Data Collection: A Report to Congress under the Violence Against Women Act*, NCJ-161405 (Washington, D.C.: July 1996).

An October 1999 update to the 1996 report⁵ on domestic and sexual violence expanded on the original findings. With respect to law enforcement databases—which collect data on offenses reported to or arrests by local law enforcement agencies—34 states reported having some type of law enforcement data collection system for domestic violence. In discussing the key components of law enforcement databases, the report stated that domestic violence offenses in these systems can be identified through a number of methods—including relationship and offense codes, flags, specific offense codes, and specific crime statutes. For example, “flags”—typically a special line entry or box that is checked—clearly designate an offense in the state’s criminal history records as domestic violence, thus making these offenses easier to identify for law enforcement purposes. Recognizing the advantages of these systems, the report recommended, among other things, that states should implement incident-based reporting systems that use nationally compatible offense and relationship codes.

Institute for Law and
Justice

In October 2000, the Institute for Law and Justice—under a grant from the National Institute of Justice—reported on state domestic violence laws from a law enforcement perspective.⁶ The report noted that criminal code provisions for addressing domestic violence include both traditional common law offenses—such as assault and battery—as well as provisions that specifically criminalize domestic violence and related offenses. Specifically, 37 states had enacted domestic battery laws to complement common law assault and battery laws. These offenses can be classified as misdemeanors or felonies, depending on the circumstances. According to the report, the primary purpose of these laws is to provide enhanced penalties, especially for repeat offenses. However, the laws also provide a basis to more clearly identify domestic violence-related offenses within a state’s criminal history records.

The report concluded that the states had adopted widely variant statutory models for addressing domestic violence and that state legislation making domestic violence a crime was “largely a hodge-podge of differing provisions.” To address these issues, the report identified certain model

⁵Justice Research and Statistics Association, *Domestic Violence and Sexual Assault Data Collection Systems in the States* (Washington, D.C.: Oct. 1999).

⁶Institute for Law and Justice, *A Review of State Domestic Violence-Related Legislation: A Law Enforcement and Prosecution Perspective* (Alexandria, Va.: Oct. 31, 2000).

legislative guidelines that states could follow in revamping their domestic violence laws. With respect to criminal law provisions, these guidelines included, among other things, the establishment of specific state domestic violence assault and battery offenses.

Bureau of Justice Statistics

In April 2002, BJS issued its latest in a series of surveys of state procedures for firearms sales.⁷ Among other things, BJS surveyed the states to determine what automated or manual databases maintained by state agencies were normally available to checking agencies during the course of firearms background checks. As of June 2001, BJS found that all 50 states had established criminal history databases containing—at a minimum—felony arrests and convictions and, in some cases, dispositions and other data on domestic violence and other misdemeanors. In addition to these general criminal history databases, BJS further reported that 33 of the states surveyed had misdemeanor conviction databases that could also be accessed during firearms background checks. However, the report did not indicate whether these databases were automated or manual, nor the extent to which they included domestic violence convictions.

Differences in Domestic Violence Laws and Procedures in Selected States

In the six states we visited, we looked for various approaches used by the states that could make it easier to identify domestic violence convictions in state criminal history records for purposes of NICS background checks. As shown in table 12, these approaches included establishing a specific domestic violence criminal offense, defining domestic violence as an element of certain general criminal offenses, enacting penalty enhancement statutes for domestic violence offenses, and flagging domestic violence offenses in the criminal history records.

⁷Department of Justice, BJS, *Survey of State Procedures Related to Firearms Sales, Midyear 2001*, NCJ-192065 (Washington, D.C.: Apr. 2002).

Table 12: Selected State Laws and Procedures for Identifying Domestic Violence Offenders in Criminal Records

Michigan	•		•	•
Texas			•	
Utah	^a	•	•	•

^aUtah has enacted a domestic violence criminal offense, but the statute covers only domestic violence committed in the presence of a child.

Source: GAO’s analysis of state statutes, agency documents, and discussions with state officials.

As table 12 shows, two of the six states we visited—California and Michigan—have specific statutes that make domestic violence a criminal offense. In California, the state penal code has a separate citation for misdemeanor battery, when the violence involves a spouse or other similar relationship (Sec. 243e). In addition, the state penal code contains another statute that makes certain offenders—that is, persons who willfully inflict a traumatic injury on their spouse, former spouse, cohabitant, former cohabitant, or the mother or father of their child—guilty of a felony (Sec. 273.5). When a person is convicted of domestic violence under these statutes, California law enforcement personnel are to enter the appropriate citation in the criminal history record, thus making the offenses clearly identifiable as domestic violence for NICS background check purposes. Similarly, in Michigan, the state penal code statute for assault and battery includes a separate provision for domestic violence misdemeanor when the assault involves a family member or other close relationship (Sec. 750.81(2)).

Two states—Florida and Utah—define domestic violence in noncriminal statutes, rather than within the context of a specific domestic violence criminal offense. For example, Florida’s statutes on domestic relations define domestic violence to mean offenses such as assault, battery, false imprisonment, or any criminal offense resulting in physical injury or death of one family or household member by another who is or was residing in the same home (Sec. 741.28). Florida also requires a minimum level of punishment when any of the specified domestic violence-related offenses are committed. Similarly, Utah’s code of criminal procedure contains the Cohabitant Abuse and Procedures Act, which

includes a definition of domestic violence (Sec. 77-36-1). Within this definitional statute, certain crimes are identified—such as assault and harassment—which, if they involve one cohabitant assaulting another, are considered to be domestic violence offenses. In both states, however, the offenses themselves are still charged under general criminal statutes and, thus, they may not be easily identified in the criminal records during the course of a NICS background check.

Four states—California, Michigan, Texas, and Utah—have penalty-enhancement statutes that provide for additional punishment when convicted domestic violence offenders are subsequently convicted of another domestic violence offense. For example, under the Michigan domestic violence statute, a convicted first-time offender is guilty of a misdemeanor punishable by up to 93 days in prison, making this a less serious misdemeanor. However, second-time offenders are guilty of a misdemeanor punishable by up to 1 year in prison (Sec. 750.81(3)), and third-time offenders are guilty of a felony punishable by up to 2 years in prison (Sec. 750.81(4)). These enhancements increase the penalty for the domestic violence offense, but also—because they are considered more serious than first-time offenses—make them subject to more stringent reporting procedures to the state’s criminal history repository. Texas, has a penalty-enhancement statute for familial assault (Sec. 22.01(b)), which is a separate citation under the state’s penal code for general assault. A misdemeanor offense normally charged under the assault statute is enhanced to a felony if the defendant has previously been convicted of an assault involving the offender’s spouse or other member of the household. While felony enhancements would be easily identifiable in the criminal records as disqualifying offenses during a NICS background check, first-time misdemeanor offenders charged under the general assault statute may not be as easily identified, since this part of the statute includes not only domestic assaults, but other types of assaults as well.

Finally, three of the six states—Florida, Michigan, and Utah—identify domestic violence offenses in their criminal history database by using an automated flag. According to Florida officials, 2 years ago the Florida Department of Law Enforcement implemented an automated fingerprint system that allows users to check a “yes/no” box when submitting a domestic violence offense to the state’s criminal history repository. In addition, this system provides a narrative field that allows users to enter details of the domestic violence incident. The “yes/no” box and narrative

field allow anyone conducting a NICS background check to quickly see from the criminal history record if the person has a domestic violence offense on his or her record.⁸ In Michigan, any time the offense code for a domestic violence offense is entered into the criminal history record, the system automatically places a flag in the record indicating that it is a disqualifying domestic violence offense.

One of the states we visited—Massachusetts—has no specific domestic violence criminal offense statute, nor other mechanism for easily identifying domestic violence offenses in the state’s criminal history records. In February 2002, the state amended its criminal statutes (Chap. 265, Sec. 13A) in order to create two new types of offenses—assault or battery against pregnant women and assault or battery in violation of certain protective orders. Although both provisions could be used to prosecute domestic violence-related offenses, the former provision could also be used to prosecute an assault where there is no family or household relationship involved. Also, this provision does not define or include any reference to the offender-victim relationship as a required element of the offense. As such, a conviction under the new statute, in and of itself, would not always be an indicator that the offense is domestic violence-related.

⁸Historically, flags have been used to mark persons that have a felony conviction in their criminal record, thus making felony firearms disqualifiers more easily identifiable by law enforcement officials.

Appendix VI: Comments from the Department of Justice

U.S. Department of Justice
Office of Legal Policy

Washington, D.C. 20530

Washington, D.C. 20548

Re: GAO Review of Ways to Improve the National Instant Criminal Background Check System

Dear Ms. Eckstrand:

Thank you for the opportunity to review the final draft of the General Accounting Office ("GAO") report entitled "Gun Control: Opportunities to Close Loopholes in the National Instant Criminal Background Check System, GAO-02-720." This letter constitutes the formal comments of the Department of Justice, and I request that it be included with that report.

The report observes that in the first thirty-four months of NICS operations, approximately 2,800 NICS transactions involving persons convicted of domestic violence misdemeanors were referred to the Bureau of Alcohol, Tobacco, and Firearms (ATF) for the retrieval of a firearm. These referrals were made because the NICS did not obtain information showing the person to be disqualified until after the expiration of the three business days allowed for NICS checks. The Brady Act allows gun dealers to transfer a firearm to a prospective purchaser, if the NICS does not advise the dealer within three business days that it has determined, based on available information, that the person is prohibited. Transactions determined by the NICS to be prohibited after the time allowed under the Brady Act are referred to as "delayed denials." As your report notes, delayed denials occur with other categories of prohibited persons as well, the largest category involving persons convicted of a felony. We believe that all delayed denials are a cause for concern and, for that reason, the FBI immediately refers such cases to the ATF for a firearm retrieval investigation.

As your report notes, the problem of delayed denials stems from incomplete or inaccurate state criminal history records. The Department of Justice has been directing substantial resources, authorized by Congress, to address this problem through the National Criminal History Improvement Program (NCHIP) to assist the states in improving their criminal history record systems. The Department has awarded nearly \$40 million in NCHIP funds to the states in FY 01 and will award \$39 million in FY02. For FY03, the President's budget requests \$63 million for this purpose. Since its inception in 1996, NCHIP has provided over \$350 million to the states to automate and improve the completeness of their criminal history record systems. Through these efforts, the problem of incomplete criminal history records should diminish over time.

Ms. Laurie Eckstrand
June 28, 2002
Page 2

In the area of domestic violence, the NCHIP has focused in particular on getting states to promptly enter domestic violence protection orders into the National Protection Order File in the Federal Bureau of Investigation's (FBI's) National Crime Information Center (NCIC). Since persons subject to these orders have been found by a court to pose a threat to the physical safety of an intimate partner or child, we believe it is particularly important to ensure that information on such persons is available for a NICS check. This file was first established by the FBI in May 1997, and has grown from 3 states entering 126 protection orders at the outset, to 42 states that have entered over 678,000 protection orders today. Between 1995 and 2001, the Department awarded approximately \$16.5 million in NCHIP funds to 46 states and the District of Columbia addressing domestic violence, targeting directly the development of databases of protection orders that can be made available to the NICS.

In addition, the FBI NICS has allowed states to enter into the NICS database information about protection orders that do not meet the criteria for entering records into the NCIC, thereby providing the states an additional avenue for making this information available for NICS checks. The FBI has also developed a special training program that it regularly presents to state officials to promote the prompt entry of protection orders in the National Protection Order File. For misdemeanor crimes of domestic violence, the FBI is encouraging states to flag records of misdemeanor domestic violence convictions, and states have begun using NCHIP money for this purpose.

Even with this progress, however, the Attorney General recognized a year ago that more needs to be done to achieve greater completeness in the criminal history record system, and directed the Bureau of Justice Statistics (BJS) to study and recommend ways to target these grants to improve the accuracy of state criminal history records, including records relating to domestic violence. A copy of the Attorney General's directive, dated June 28, 2001, is attached. The BJS recommendations will assist the states in making the most of their NCHIP grants to improve the completeness and accuracy of their criminal history records.

Finally, we think it is important to put the scope of the problem of delayed denials into perspective. In the time frame covered by your report (November 30, 1998 – September 30, 2001), the FBI's NICS Operations Center processed over 12 million background checks. The approximately 11,000 firearm retrieval referrals by the FBI cited in the report constitute .09 percent of the total transactions processed, which is a very low error rate for a system of this size and complexity. That being said, we are still taking affirmative steps, with the support of Congress, to reduce this error rate by continuing our efforts to achieve the most complete and accurate criminal history record system possible.

Ms. Laurie Eckstrand
June 28, 2002
Page 3

We appreciate the GAO's review of these issues and thank the Congress for its support in our continuing efforts to improve the NICS to effectuate fully the requirements of the Brady Act.

Sincerely,

Viet D. Dinh
Assistant Attorney General

MEMORANDUM FOR MARY LOU LEARY
ACTING ASSISTANT ATTORNEY GENERAL
OFFICE OF JUSTICE PROGRAMS

FROM: THE ATTORNEY GENERAL *[Signature]*

SUBJECT: Improving Access to and Integrity of Criminal History Records

I hereby direct the Bureau of Justice Statistics (BJS) to conduct a study and review of the problem of missing dispositions in criminal history records. This process should include a comprehensive review of the factors that are responsible for incomplete criminal history records, and their impact on public and private entities which utilize these records, including, but not limited to, the National Instant Criminal Background Check System (NICS). It is my hope and expectation that this process will begin immediately and be completed expeditiously.

In order to achieve this goal, I further direct that the review and study should include, among other considerations, the following elements:

1. A collection and review of relevant data from the National Instant Criminal Background Check System as it relates to missing dispositions in NICS background checks. Accordingly, the Federal Bureau of Investigation's National Instant Criminal Background Check System program is instructed to cooperate in providing BJS with the necessary data to conduct said review;
2. The Bureau of Justice Statistics shall conduct a survey of the states in order to determine the level of record completeness and the relevant technological infrastructure needed to support State Criminal History Repositories. This study should include information and data from all federal and state agencies with involvement in criminal history records, including the court systems, law enforcement agencies and prosecutors' offices;
3. The Bureau of Justice Statistics shall also conduct a review of the current requirements, usage, targets, and restrictions of the NCHIP grant program. This review should focus on what continuing and further efforts can be made by the NCHIP program to bring states up to a higher level of criminal history record completeness;

Memorandum for Mary Lou Leary
Subject: Improving Access to and Integrity of Criminal
History Records

Page 2

4. As a part of this study the Bureau of Justice Statistics shall also review the availability of state records relating to categories of prohibited persons, including adjudicated mental health and domestic violence records.

Please coordinate this review and study in conjunction with the Office of Legal Policy. Upon completion of the review, please report to me developed recommendations for a national, coordinated effort to solve the problem of missing records for criminal histories and other prohibited categories.

Appendix VII: Comments from the Bureau of Alcohol, Tobacco and Firearms

DIRECTOR

DEPARTMENT OF THE TREASURY
BUREAU OF ALCOHOL, TOBACCO AND FIREARMS
WASHINGTON, DC 20226

JUN 24 2002

CC-73,334 FE:SRR

Mr. Dan Burton
Assistant Director
U.S. General Accounting Office
Washington, DC 20548

Dear Mr. Burton:

This is in response to your request for comments on the draft General Accounting Office (GAO) report entitled "Gun Control: Opportunities to Close Loopholes in the National Instant Criminal Background Check System (NICS)." The Bureau of Alcohol, Tobacco and Firearms (ATF) appreciates the opportunity to comment on the findings and recommendations of the GAO with respect to this issue.

The draft report provides information on differences in State laws regarding restoration of firearms rights and criteria for issuance of concealed weapons permits. The report also examines ways in which the States ensure that convictions for misdemeanor crimes of domestic violence are accessible to NICS. The report focuses on the laws of six States: California, Florida, Massachusetts, Michigan, Texas, and Utah.

The draft report contains two recommendations, only one of which pertains directly to ATF. The recommendation that is outside of our jurisdiction suggests that Congress should consider an amendment to the Brady Act that would allow the Federal Bureau of Investigation (FBI) more than three business days to process background checks, to ensure that prohibited persons are not allowed to purchase guns from firearms dealers. ATF has no comment on this legislative proposal, and would defer to the views of the Justice Department on this issue.

WWW.ATF.TREAS.GOV

-2-

Mr. Dan Burton

The draft report also recommends that ATF consider amending its regulations to require Federal firearms licensees to contact State permit authorities to ensure that a State concealed weapons permit is still valid before accepting that permit as an alternative to the background check otherwise required under the Brady Act. ATF will take this recommendation under consideration. However, as noted in the draft report, ATF would first need to examine whether there is a real problem to address here - in other words, whether individuals with revoked permits have, in fact, been able to purchase firearms without background checks. If ATF determines that a problem exists, we will consider what options are available under current law to deal with this issue.

We would reiterate our prior comments that the language on pages 15-16 may be misinterpreted to imply that ATF favors repeal of the permit alternative under the permanent provisions of the Brady law, or that ATF officials believe that the rationale for allowing permit holders to avoid a background check at the time of sale is weaker now than it was when interim Brady was enacted in 1993. Furthermore, ATF did not express the view that holders of valid permits that qualify as alternatives to a background check should be required to undergo a NICS check at the time of purchase. It is ATF's mandate to enforce the statute as enacted by Congress, and we are enforcing the permit provisions of the Brady Act in a manner consistent with the plain language of the statute as well as Congressional intent. To the extent that the discussion on these pages is intended to reflect the views of GAO rather than ATF, we request that the language be modified to clarify this point.

ATF has already provided you with technical comments on the draft report's analysis of Federal and State laws. Rather than repeat those comments at this point, we would simply incorporate them by reference.

-3-

Mr. Dan Burton

You should also note that on page 49, it is stated that a set aside of a Michigan felony conviction would restore Federal firearms rights. While this issue is under consideration by the Michigan Attorney General's office, it is ATF's current position that since individuals who have had their Michigan felony convictions set aside are still subject to State firearms restrictions. The set aside does not remove Federal firearms disabilities.

We appreciate the opportunity to provide you comments on this report. We also appreciate the professionalism displayed by your audit team in conducting the research necessary for preparing it. We hope that you will find our comments useful in preparing your final document.

Sincerely yours,

Bradley A. Buckles
Director

Appendix VIII: GAO Contacts and Staff Acknowledgments

GAO Contacts

Laurie E. Ekstrand, (202) 512-8777
Danny R. Burton, (214) 777-5600

Acknowledgments

In addition to the above, David Alexander, Philip Caramia, Marco Gomez, Barbara Guffy, Geoffrey Hamilton, Michael Harmond, William McDaniel, and Ellen Wolfe made key contributions to this report.

GAO's Mission

The General Accounting Office, the investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through the Internet. GAO's Web site (www.gao.gov) contains abstracts and full-text files of current reports and testimony and an expanding archive of older products. The Web site features a search engine to help you locate documents using key words and phrases. You can print these documents in their entirety, including charts and other graphics.

Each day, GAO issues a list of newly released reports, testimony, and correspondence. GAO posts this list, known as "Today's Reports," on its Web site daily. The list contains links to the full-text document files. To have GAO e-mail this list to you every afternoon, go to www.gao.gov and select "Subscribe to daily E-mail alert for newly released products" under the GAO Reports heading.

Order by Mail or Phone

The first copy of each printed report is free. Additional copies are \$2 each. A check or money order should be made out to the Superintendent of Documents. GAO also accepts VISA and Mastercard. Orders for 100 or more copies mailed to a single address are discounted 25 percent. Orders should be sent to:

U.S. General Accounting Office
441 G Street NW, Room LM
Washington, D.C. 20548

To order by Phone: Voice: (202) 512-6000
 TDD: (202) 512-2537
 Fax: (202) 512-6061
